MICRO TRAINING FOR COMPUTER USERS

6 Micro courses

at Digitus

Which would you like to attend?

Digitus is running a number of courses to train users and potential users in the basic skills of micro-computing. Conducted at our Central London Workshop, the courses provide hands-on experience of microcomputers, demonstrations of working systems and tutorials on your particular needs.

INTRODUCTION TO MICROCOMPUTERS

One day's concentrated information on microcomputing aimed at the potential user in small and large organisations. A practical course which includes business applications of micros, guidelines on selecting microcomputer systems and an introduction to programming.

WORDSTAR WORDPROCESSING

A one day course for people who want to learn the fundamentals of wordprocessing. Uses the popular Wordstar wordprocessing package available on most CP/M micros and teaches by hands-on use.

MICRO-PRO SOFTWARE TOOLS

In addition to Wordstar, Micro-Pro Inc have produced a variety of aids to improve productivity in offices and systems departments. This one day course includes: Mail-Merge linked to Wordstar • Supersort sorting utility • CalcStar rows and columns manipulation • DataStar information manager • harnessing the 'Star' products together.

All courses provide access to an extensive range of micro hardware, software and expertise.

Note: Wordstar and DataStar are registered trademarks of Micro-Pro Inc.

FUNDAMENTALS OF PROGRAMMING IN BASIC

A two day course designed to teach the first principals of programming in BASIC. Aimed at those with some understanding of micros who want to learn how to instruct their computer to perform tasks.

DATASTAR INFORMATION MANAGEMENT

The DataStar data entry, retrieval and management system is a powerful aid which enables the educated user and computer professional to build information systems economically and rapidly.

IMPROVE YOUR BASIC

A two day course for those who have learned Basic from hands-on experience and want to brush up their BASIC techniques and learn some timesaving software tools.

Training for Computer Professionals

Course in: Micro Technology for Management • Local Area Networks • Micros for Computer Professionals.

Courses are run at the Workshop or on site. Telephone or write for details.

Micro Technology Workshop Set in 8,500 sq. ft in Central London, the Workshop is a few minutes from Covent Garden, Trafalgar Square, Charing Cross, Embankment and Waterloo stations. Specialist areas include: Personal Computers, Technical Systems, Business Systems, 16 bit and Local Network Systems, Bookstore and Training Rooms.

Booking and Fees The fee for all courses is £80 per day plus VAT, payable 14 days prior to starting date.

Booking Form (Please complete in BLOCK capitals)

THE LARGEST MICROCOMPUTING SHOW IN BRITAIN

**Barbican Centre, City of London
9-12 September 1982**

Breaking all records!

By the first week in March, Exhibitors had already booked more space in the 5th Personal Computer World Show than the total on exhibition last year! It is absolutely certain now that the Show will be at least twice the size of last year's record breaking event. Possibly even three times the size or more.

Fortunately, the superb facilities at the Barbican offer us the opportunity to satisfy the staggering demands for space we are currently experiencing. The majority of Exhibitors have doubled their stand size in both sections of the Show which, like last year, will be divided into two floors. One floor will cater for professional and business microcomputing. The other will be devoted to home and hobbyist applications.

Massive stands have been booked or under offer from virtually all the big names in microcomputing. And a surprising proportion from foreign manufacturers!

Last year, the PCW Show brought more visitors to a microcomputing show than had ever been seen in the UK before. Sixteen thousand people in three days. This year the Show has been extended to four days and we are expecting record-breaking crowds.

Our promotional budget for the Show has been doubled and we are arranging the most exciting programme of features to attract the widest possible spectrum of visitors.

If your company is involved in microcomputing we strongly advise you to send off for details and reserve space now. The 5th Personal Computer World Show is already set to be a stunning success. Be a part of that success by calling Timothy Collins on 01-486 1951 today. Or use the coupon below to obtain a full information pack.

The 5th Personal Computer World Show is sponsored by Personal Computer World and organised by Montbuild Ltd.

Please rush me details of exhibition at the 5th Personal Computer World Show:

Send coupon to: Timothy Collins, Montbuild Ltd, 11 Manchester Square, London W1M 5AB

We'd love to market the game you've invented. If we can tear ourselves away from it.

If your program is compelling enough to glue us to our television sets, then it's just what we're looking for. And if we can leave it alone for long enough to produce it, we'll glue millions of other people to their sets as well.

THORN EMI is looking for video games and other general interest programs, which have been produced for home computers from the following:

Apple, Atari, B.B.C., Commodore, Sinclair or Texas Instruments.

Whether you're a professional programmer or competent amateur, if you have produced a program that you think we may be interested in, we'd love to hear from you.

Please don't send the program direct. Write to Home Computer Software Department, THORN EMI Video Programmes, Upper St. Martins Lane, London W.C.2. and we will send you an application form.

Leaders in home video entertainment.

At the Micro House we talk business as well as computers

When you come to us for a micro computer, we'll ask you a lot of questions. So that we know your needs before we install the system. And after that we'll still be available — to give you plenty of support.

It isn't the only possible way of buying a micro. But it is the way to maximise the return on your investment. Because there's one rule about computers which always holds good, no matter how much you've paid for the

hardware. Rubbish in equals rubbish out.

- We market the unique A.C.T. Sirius 1 - a breakthrough in high-performance business computing at low cost.

- Plus a big choice of packaged software. Plus tailor-made software. Plus a range of financial packages, including Supercalc and Micromodeller.

- We organise 'hands-on' training for your staff under experienced F.C.A. supervision.

Talk to:

RICHARD ALLISON B.Sc. F.C.A. STEPHEN COLTER B.Sc., (Hons.).

You can't get a Home Computer from Texas Instruments under 16 K RAM.

Make the right move into computing with the Home Computer from Texas Instruments. It gives you a large combined RAM/ROM capacity up to 110 K Byte and the ability to expand with a full range of peripherals and software. So as your knowledge of computers increases the TI Home Computer will grow with you.

Just compare the versatility of the TI Home Computer with its price—you'll find it real value for money that will prove to be a good long term investment.

The TI-99/4A is a sophisticated computer designed not only for the beginner with its ease of operation, but also for the professional with its vast computing power through a 16 bit microprocessor. And it simply plugs into an ordinary household TV set.

With its high resolution graphics with 32 characters over 24 lines in 16 colours (256 x 192 dots), 3 tones in five octaves plus noise, and BASIC as standard equipment and options such as other programming languages—UCSD-PASCAL, TI-LOGO and ASSEMBLER—and speech synthesis, you'll find that the TI 99/4A more than compares with the competition. Especially when the starting price is £340 or less. When you want to solve problems there are over 600 software programs available worldwide—including more than 40 on easy-to-use Solid State Software® Modules.

After all, from the inventors of the microprocessor, integrated circuit and microcomputer, it's only natural to expect high technology at a realistic price.

We'll help you do better.

TEXAS INSTRUMENTS

Hewlett-Packard's for Professionals.

Hewlett-Packard's HP-85 personal computer puts full professional computing power wherever you need it. On your desk, in the lab, at home—anywhere! With all the convenience of an easy-to-use, all-in-one computer system.

Not merely a *portable* computer, but a complete, super-reliable system.

The HP-85 is complete in itself. It incorporates a high-resolution video display with editing capability. A whisper-quiet thermal printer for hard copies of display graphics and alphanumerics. A magnetic tape unit with up to 217k bytes of storage

per cartridge. And a QWERTY keyboard, a separate numeric key pad, and eight keys you can define for yourself. Powerful, built-in features—yet HP's extended BASIC language puts them at anybody's fingertips.

Full computing power that tucks under your arm!

The HP-85 weighs only 18 lb (8 kg), and is about the same size as an electric typewriter. Where you go, it goes. When you get there, simply plug in, turn on, and start work.

Extend your capability.

The HP-85 is complete—but also expandable.

Extra memory

If you work with lengthy programs, or large data arrays, simply plug in an optional module to *double* your memory to 32k byte. And if that's not enough, there's the HP 82900 series of 5 1/4" flexible disc drives

Each with 270k bytes, giving fast, random-access, on-line storage.

Extra facilities

There's no shortage of peripherals to add!

With the range of four plug-in interface modules (HP-IB, RS-232C serial interface, GP-IO and BCD) you can connect your HP-85 to a full line of peripherals. There's a whole range of HP thermal and impact printers, as well as the quality HP 7225 graphics plotter, or the HP 9111A graphics tablet.

And with the HP-85 peripherals there's no need to write special operating programs—HP's peripheral ROMs do it for you.

Personal Computer The HP-85.

Advanced graphics – the easy way.

The HP-85 can turn the most complex data into easy-to-analyse graphs and plots. It copies anything from the display to the printer with a single command so you can generate an unlimited number of lines, curves, diagrams and designs. From plotting data to drawing and labelling graphs with ease.

And should you need multi-colour or presentation graphics, simply attach the P 7225 Graphics Plotter to enhance your capability even further.

Get even more out of your HP-85 with Hewlett-Packard's unique software support.

As an HP-85 owner, you are provided with a comprehensive range of software support to make sure you can get the most out of your personal computer.

The Optional Application Packs, for example, provide a variety of ready-tested programs. From the disciplines of Statistics to BASIC language training... from mathematics and Finance to computer games. There are even facilities for circuit and waveform analysis, and linear programming. Another software service available to the HP-85 owner is Hewlett-Packard's unique Users Library (covering 11 Europe). At nominal cost it's designed specifically to encourage and facilitate the exchange of user-generated programs. Its resources cover the widest possible range of scientific and professional activity.

Extra user support

The HP-85 comes complete with the 30 manual. Its high-quality documentation

and easy-to-read style make up 340 comprehensive pages of instructions, programs and examples. Just as simple to follow whether you're the experienced pro. or the first-time user!

Super controller as well

The HP-85 is HP-IB compatible. This industry standard (IEEE-488) allows the connection of up to 14 instruments and peripherals per interface. And not only HP's instruments!

The micro-processor-based interface card handles the complex interfacing task. *So you can concentrate on how to use the instrument, instead of on how to hook it up.* Personal computer one minute – controller the next!

Hewlett-Packard: computers designed for professionals, with professional reliability guaranteed.

Behind the HP-85 computing system is the strength of Hewlett-Packard, one of the world's largest computer manufacturers. This means continuous commitment to quality – and single-source supply, service and support. When you build your personal system around an HP computer, you build in two important extras: first, the legendary Hewlett-Packard long-term reliability; second, the assurance that your entire system can be serviced and cared for on site by the same computer professionals who designed it. Think about a demo – today.

ITT 3030

programmed for growth

The ITT 3030 Microcomputer is the ultimate in modularity of design. Starting with a 64k, Z80A 4 MHz processor with twin 280k 5¼" Floppy disks, the ITT 3030 can be expanded to a 256k 16-bit Intel 8086 processor supporting twin 10 MB Winchester hard disks.

The keyboard features 15 programmable function keys, numeric keypad, and a 12 key Word Processing keypad. The keyboard is "soft" permitting simple customisation of control key functions for differing applications.

The display is 80 chs x 24 lines with an 8 x 12 matrix, upper and lower case with true descenders. The RS232 interface comes as standard.

Hardware Modules.

The ingenious hardware design permits the addition of the following:-

- | | |
|----------------------------------|-----------------------------|
| — RS232 adaptors (2 or 4 lines), | — Parallel Interface. |
| — IEEE - 488 Interface. | — S100 Interface. |
| — Real Time Clock. | — TV Adaptor - Colour. |
| — Graphics/Colour Adaptor. | — Monitor Adaptor - Colour. |

Keeping Ahead.

By using this unique modular approach, the ITT 3030 is able to keep up with the day to day improvements in the fastest growing technology on earth.

Software.

The ITT 3030 applies the same principles of modularity to its software as it does to its hardware. There is a choice of three operating systems:-

- CP/M, MP/M[®] — BOS/5,[®] — UCSDpSystem (V.4)[®]

which support a wide variety of application programs. There is a complete range of Accounting and Business applications available from ITT running under BOS/5 plus a whole variety of business packages designed to run under CP/M. New software is continually being added under both CP/M and the BOS operating systems.

With the ITT 3030 you can confidently think ahead to Multi-user, Networking facilities, advanced operating systems knowing that the modular construction of the ITT 3030 will enable the hardware to keep pace with software innovation.

THINK AHEAD with the ITT 3030.

NASBUS Compatible DOUBLE DENSITY Disk System - Available Ex Stock

With hundreds in daily use the Gemini Disk system is now the standard for Nascom and Gemini Multiboard systems. Single or twin drive configurations are available, giving 350K storage per drive. The CP/M 2.2 package available supports on-screen editing with either the normal Nascom or Gemini IVC screens, parallel or serial printers, and auto single-double density selection. An optional alternative to CP/M is available for Nascom owners wishing to support existing software. Called POLYDOS 2 it includes an editor and assembler and extends the Nascom BASIC to include disk commands.

NEW MicroValue Exclusive
I/O Board for Nascom & Gemini Multiboard Systems

with the exclusive MicroValue 12 Months Warranty*

GM816 Gemini I/O board

The new GM816 Gemini I/O board takes a unique approach to the problems of interfacing your Nascom or Gemini Multi-board to external devices. This 80 Bus and Nasbus compatible card is supplied fully built, populated and tested and includes three Z80 PIOs, a CTC and a Real Time Clock with battery back-up. In addition, a range of "daughter" boards that attach straight to the I/O board are under development catering for a wide variety of interfacing requirements.

MAZOGS

A MAZE ADVENTURE GAME FOR sinclair ZX81

MAZOGS is a brand new game for the 16K ZX81, unlike any other game you've seen on the ZX81. This is without doubt the best game available for this computer, and if you don't believe us, ask somebody who has seen it, or go down to your local computer shop and ask for a demonstration.

MAZOGS is a maze adventure game with very fast-moving animated graphics. A large proportion of the program is written in machine code to achieve the most amazing graphics you have ever seen on the ZX81.

You will be confronted by a large and complex Maze, which contains somewhere within it a glittering and fabulous Treasure. You not only have the problem of finding the treasure and bringing it out of the maze, you must also face the guardians of the maze in the form of a force of fearful Mazogs. Even if you survive their attacks you could still starve to death if you get hopelessly lost. Fortunately, there are various ways in which you can get help on this dangerous mission.

There are three levels of difficulty, and the game comes complete with comprehensive instructions. The cassette on which the game is supplied is of the highest quality, and loading is guaranteed.

Mazogs is available from Bug-Byte and most good computer shops at £10.00 inclusive.

Why take risks with accounting software?

Logic Computer Systems specialise in financial management systems on microcomputers.

We provide a comprehensive service which begins when we help you select the right system. But we don't stop there; we also install the computer and train your staff. Then we provide professional on going service and support.

We know that the choice of software is crucial. We recommend only the very best proven software. For instance . . .

Jarman accounting software, designed by Accountants to provide the right information to help you to control your business.

We offer programs for integrated sales purchase and nominal ledgers, payroll and stock control. They are all available for Apple II and Apple III computers.

For further information or a demonstration simply return the coupon or phone
01-222 1122/5492

Great Memories Run In Our Family.

Making your personal IBM
even more valuable.

Now E.O.S. offers you
and your IBM powerful
memory-expansion PCBs
with up to 512Kb storage
per board.

With these versatile
add-ons, you can increase
your computer's memory
to the highest, practical
level of current technology

— and do it with minimal demands on space and
power.

Because only the finest-quality materials and
construction go into our multi-layer boards, you are
assured of both the lowest signal distortion and the
best RFI performance.

Mapping ROM makes set-up fast and easy, with a
choice of flexible memory configurations.

As you don't wait for delivery. Our five PCB
memories are available now—in 64, 128, 192, 256 and

512Kb. Each can be obtained in an expandable version.

Whatever your needs may be, you'll find that our
"product-family" approach to memory design and
manufacture backs you with total operating-system
support—before and after sale.

For complete details on our family's great memories,
don't forget to return our coupon.

Dealer inquiries are welcome.

UK101 — OHIO

BASIC 5 — for UK101 and OHIO

Adds 17 new BASIC words to your interpreter which can be used in program lines and gives machine-code response speed

HLIN, VLIN, SCR, BLK, SET and TEST allow high speed generation and manipulation of graphics
PRINTUSING, PRINTAT, INAT allow total control of screen input/output

GET (key), RD (Read DATA), GS and GT (GOSUB and GOTO a variable), GO and GO\$ (GOTO a machine code routine), allow total program flexibility

WI and CWI allows CEGMON screen manipulation.

BASIC 5 is available for CEGMON, MONO2 and SYNMON/MONO1 only. State precisely your computer and monitor when ordering. Comes complete with comprehensive manual.

Available on DISK or in EPROM (9000 hex) £19.95

TOOLKIT 2 FOR UK101/OHIO

The most powerful TOOLKIT on the market, TOOLKIT 2 gives the following facilities in only ONE EPROM.

REPL exceptionally powerful Global Search and Replace of BASIC listings.

DUPL copy a line into a new line

LIST/ controlled listing of program

FIND anything in a BASIC listing

RENUM renumber from any start in any increment — full error messages, totally reliable

AUTO any start, any increment.

DELETE high-speed block line delete

VIEW cassette dump verification

TRACE superb trace feature — screen transparent MC enter the monitor quickly!

TOOLKIT 2 also lists on error and cures the warm start 'OM ERROR' bug.

Available in EPROM only (8000hex), for CEGMON, MONO1 & 2, and SYNMON monitors (DISK soon),

Price £19.95. State machine & monitor

SPECIAL OFFERS

TOOLKIT 2 + MINI EPROM BOARD £29.95

Interrupt linkable if required

Padding for future options

Shugart Bus supplied

Linkable to other Bus requirements

providing signal compatibility is maintained

OSI SYSTEM COMPATIBLE (SOFTWARE and HARDWARE)

Drives available early March

PRICE £49.95 Delivery — March

SOUND/V.I.A BOARD

The TES II VIA/SOUND kit gives you up to 56 Input/Output lines and programmable sound generation. In order to allow total flexibility, we are offering the kit in low-cost packs.

The Base Kit consists of PCB, connector, address decoding and buffering, plus IC sockets.

The Sound Pack consists of AY-3-8910 sound chip, amplifier and components.

The VIA pack consists of VIA and support.

BASE KIT £24.95 SOUND £11.95 VIA £9.95

SCREEN ENHANCEMENT KIT

This kit offers 20 software selectable screen formats for the UK101/OHIO, including a true 32 x 64 format. It plugs directly into the main board (OHIOs need sockets inserting) and provides almost every available screen format for ultimate software compatibility.

PRICES KIT £55.95 BUILT £69.95 (+ 2.00 P&P)

Fitting service available.

PREMIER DISK SYSTEM

PREMIER PUBLICATIONS are proud to announce that we can now supply a complete disk system for any UK 101/OHIO machine. The system consists of Floppy disk card, single and double disk drive units, ROMDOS, cables, etc.

DISK DRIVES

Premier's disk drives come complete in an attractive box containing drive(s) and integral (240v) power supply. No additional PSU is required. Main features:-

- * Ultra-reliable drives
- * Capable of running in single or double density mode
- * Storage Capacity — 80K (or 90K under PREMIER FORTH)
- * Transfer rate — 125K bits per second
- * Units are user address-selectable — up to four may be daisy-chained
- * Shugart Standard Interconnections
- * Integral power supply
- * LED 'drive running' indicator
- * DELIVERY Immediate

Prices (VAT inc)

Single Drives	£229.95
Dual Drives	£379.95
Floppy Disk Card (kit)	£49.95
(built & tested)	£67.95
Single Disk Cable	£9.95
Dual Disk Cable	£15.95
(cables free if FDC & Disk Unit(s) purchased together)	

NOTE!! P&P on the above drives is £10.00 extra per order.

LINK 65

This superb new suite of routines for the OS65D and ROMDOS disk system will simplify your disk operations enormously. The new commands are all called from BASIC, and being written in machine code, do not cause the loss of the resident BASIC program. No longer do you have to put your BASIC Program in a temporary store while you create the correct track length file for it — simply type DISK!! DU PROG 1 and LINK65 will create a file for the program and then dump it onto disk.

Finding the contents of a disk has up to now required a BASIC program to be called — DISK!!DD will almost instantly produce a neat, double column listing of your disk contents without disturbing resident programs.

Indirect files now become a Simple command — you can have two BASIC programs in workspace at once, use either one or merge them into one program.

In addition to the above features, LINK65 also produces FULL disk error messages, not simply a number which you have to look up!

All of LINK65's routines can be used either from BASIC, the Assembler or the kernel.

LINK65 comes complete with user-booklet, PRICE £17.95inc. State OS65D or ROMDOS when ordering, plus machine type.

ROMDOS

ROMDOS has been commissioned and written specifically for the PREMIER UK101/OHIO Disk System. It is principally aimed at the user with a small capacity RAM machine, but is also extremely useful for the larger RAM machine user since it allows BASIC programs to run with disk with little or no alteration. ROMDOS links the standard BASIC-In-ROM with a disk controller program so no RAM memory is used for the BASIC interpreter AND UNDER 4K for ROMDOS, giving an 8K saving in memory over the normal OS-65D system. The BASIC IN ROM continues to work at its normal high speed and is enhanced by a wide range of disk commands. The system is compatible with ALL standard Premier EPROM upgrades such as BASIC 4, BASIC 5, and TOOLKIT2

ROMDOS comes as a two disk set with complete documentation. PRICE £19.95

POSTAGE & PACKING Software 75p per order, EPROMS/DISKS 95p per order, HARDWARE £POA.

OMNIS®

NEW

OMNIS sets new standards in database programs and levels of performance that you never believed were possible on a microcomputer.

- **OMNIS** is written in UCSD Pascal+, this means a better structured, faster running set of programs than could ever be possible using Basic — We believe that UCSD Pascal+ is the best microcomputer language available — OMNIS proves it —
- **OMNIS** is structured around powerful file handling modules. These modules give you the flexibility to store and retrieve your information in the way that you want. Full multi-key indexed access is available to all your database files, you say what you want — OMNIS does the rest.
- **OMNIS** provides you with a versatile report generating module that enables you to define your own reports, lists, mailing labels etc.
- **OMNIS** has unparalleled search facilities to allow you to be selective. Those hours of fruitless searching through rows of card indexes becomes a thing of the past.
- **OMNIS** lets you design your own screen layouts for data entry and inspection — you may have up to 10 screens per file.

All registered users of OMNIS will be sent **FREE BACKUP** disc and you will be kept informed of all updates and upgrades. Free help will be given to all registered users via an OMNIS hotline.

MEMDISK

ADDITIONAL DISK TYPE STORAGE FOR UNDER £30!!

One of the most fantastic utilities to hit the market in many a day! MEMDISK literally creates a disk drive type storage in RAM. It uses many of the extensive sophisticated features of LDOS in order to achieve this miraculous effect! When the "drive" has been created it may, in general, be used as any other drive. Commands such as COPY, BACKUP, FREE, DIR, SAVE, LOAD and DUMP may all be utilised.

Memdisk is an absolute boon for the single drive user. Files may be copied from his single drive to the drive in memory, disks changed and then copied back. To coin a phrase — the applications are only limited by the imagination of the user whether you have one drive or more — after all, you always need another!

There are, of course, some limitations. Chiefly, that the maximum size of storage is 27K usable. The other side of the coin is that this space is user selectable from 1.5K to 27K. Tracks may be set up in 1.5K or 3K blocks.

Memdisk may be used with Double Density drives without any problem, although the memory drive itself, of course, cannot be double density. To assure reliability, Memdisk tests the RAM area which it is going to use before it installs itself.

Best of all, a Memdisk drive is faster than any floppy drive available and it is even faster than many hard disk drives. Memdisk involves no additional hardware of any sort. There is nothing to align, nothing to clean and nothing to break. It's all software.

Memdisk is available for all Genie machines and the Tandy Model 1 and Model 3. It requires a minimum of one drive 48K RAM and LDOS.

Memdisk £ **29.45** inclusive

- * Complete technical information.
- * A Quarterly **LDOS** users magazine (The **LDOS QUARTERLY**).
- * A liberal update policy.
- * An enhanced **BASIC (LBASIC)** including:
 - > Upward compatible with Microsoft Basic.
 - > High speed **LOAD** and **SAVE**.
 - > Run multiple programs with common variables.
 - > **BLOCKED** (variable length) files are supported.
 - > **DOS** commands may be executed from **LBASIC**.
 - > Built in string array, **SORT**.
 - > Single stepper for debugging.
 - > Several new statements and file modes.

- A compiled **JOB CONTROL LANGUAGE (JCL)**.
- **CONVERT** utility to move files from Model III **TRSDOS**.
- An Extended Debugging and Monitor program (with disk access).
- **CMDFILE** for movement of disk and/or tape system (**/CMD**) files.
- Device independent operation.
- Full **LINKing**, **ROUTEing**, **FILTERing** and **SETting** are supported.
- **MiniDOS** feature for constant access to certain **DOS** commands.
- **RS-232 DRIVER** for serial support.
- Sophisticated communications software included.
- Wildcard characters and partial Filespecs are supported.
- **DATED FILES**, show when a file was last written to.
- Backup: Mirror, by Class, if Modified, by Date, by Extension, etc.
- Selectable **PURGE** for fast disk "cleanup" of unwanted files.
- Print formatter, for control of printer output.
- Built in printer **SPOOLER**, to both disk and ram.
- Joblog to record all system operations with time stamps.
- **UPPER** and **lower** case support, throughout the system.
- Blinking cursor with selectable cursor character.
- 128 character **TYPE AHEAD** buffering for keyboard input.
- Assign strings to individual keys with Key Stroke Multiply (**KSM**).
- **SUPER FAST** operation with the **SYSRES** feature.
- Extensive user control and system feedback.
- Advanced **PATCH** utility for easy maintenance.
- Complete transportability of software among all **Z-80 LDOS** systems through the use of the **LDOS** high ram supervisory call system (**SVC**).

* Specific hardware is required to use these features.

HELLFIRE WARRIOR

The sequel to the best-selling "Temple of Apshai," "Hellfire Warrior" gives you the challenge of more command options and more detail than you've ever imagined!

Four new levels with sixty rooms each will test the character of the most experienced, the most intuitive, the most intelligent adventurer. On Level 5, you'll have to outwit giant insects to stay alive. On Level 6, you'll discover that it's as much a puzzle to solve as a dungeon to explore — because the only exit is hidden somewhere within the complicated labyrinth. On Level 7, you're constantly trying to escape from skeletons, ghouls, mummies, and even invisible ghosts. But the culmination of your adventure is on Level 8, an underworld haunted by lost souls, guarded by dragons, riddled with bottomless pits and blasts of hellfire

The object of your journey is to rescue the warrior maid Brynhild, to bring her back to sun and air, to break the spell that binds her.

But all is not lost, because "Hellfire Warrior" includes an Armory where you'll bargain for 5 kinds of swords, 5 types of armour, shields in 2 sizes, for bows and arrows. You can visit the Apothecary and buy healing salves, 13 potions available by the vial or draught. You can enter the Magic Shoppe and turn ordinary weapons into enchanted ones.

To say that the challenges are great in "Hellfire Warrior" is the ultimate in understatement!

**Price £19.50 cassette
£22.50 disk**

CRUSH CRUMBLE AND CHOMP!

Just Released

Breathe fire, terrorize cities, snack on a horrified populace, and further develop your villainous personality, CRUSH, CRUMBLE, and CHOMP!

Is there a particular city against which you crave to wreak revenge? Do you have a grudge against the Golden Gate Bridge? Lunch on San Francisco, then. Can't control your burning desire to consume the Pentagon? Dine on Washington, D.C. Fed up with cheap imports? Tokyo, perhaps. Do you hunger for the Big Apple? Munch on New York.

Be the deadly amphibian who longs to leave trails of poisonous nuclear pollution, simultaneously smash street cars with a single blow of your scaly tail, lunch on helpless humans, and radiate a ray of death from your malevolent eye.

Or would you like to be, perhaps, not even of the fallible flesh but, rather, of horrendously heartless steel? A lifeless, but life-like mechanical gizmo preprogrammed by zero population-growth professionals for the destruction of all things earthly.

If you were a giant winged creature, think of the aerial attacks you could make on the terrified but tasty titbits beneath you.

Take on the persona of any of six demonic beasts (even more for those who have a disk). Select from four mouth-watering metropolises and five different objectives, over 100 possible scenarios, complete with graphic mayhem and the resounding thunder of your monstrous presence, await your beastly appetite.

But wait! The National Guard is out to get you. The local police are sworn to your destruction. Even as you read this, a secret weapon is being readied against you by mad and skillful scientists. Are you truly prepared to face helicopters, tanks, artillery, and more, driven by those who are literally dying to get at you?

Sooner or later humanity will triumph. . . maybe. Or maybe vengeance will be yours.

**Price £15.50 cassette
£17.75 Disk**

TEMPLE OF APSHAI

Now, you can enter a universe in which quick wit, the strength of your sword arm and a talisman around your neck might be what separates you from a pharaoh's priceless treasure — or the death-grip mandibles of a giant mantis.

Enter the "Temple of Apshai," the first in our DUNJONQUEST series, the computer game that offers you the chance to undertake heroic acts in a labyrinth filled with treasures, traps and monsters.

"Temple . . ." is a role playing game (RPG) that catapults you into a world of magic and monsters doomed cities and damsels in distress.

More than a game, it's an alter ego experience. In an RPG, complex factors

that make up a human being are abstracted into a few basic characteristics: strength, constitution, dexterity, intelligence and ego. Via your role playing character, you'll venture into an essentially unknown world, and be at home with the likes of skeletons, zombies, spiders and wraiths.

When you play the "Temple of Apshai," you'll be both a character within and a reader of the epic you're actually helping to create. In this labyrinth, the choice is always yours. . . fight or flee, parry or thrust, slay the monsters or see if they'll listen to reason.

**Price £19.50 cassette
£22.50 Disk**

DEATH MAZE 5000

Price £14.75 cassette

A new breed of adventuring! Venture through a graphically represented 3-D maze, with halls that could dead end — or recede to infinity. Step through the doors or drop into the pits. Will you encounter monsters and mayhem, or will you be treated to useful objects and information? Will you ever get out alive?

LABYRINTH

Price £11.75 cassette

A nightmare of an adventure in graphically depicted three dimensions. Corridors stretch toward infinity right on your TRS-80 screen as you search this maze for treasures. If you get the feeling you're not alone, it's because you're not!

You use the arrow keys, plus two-word commands to move, manipulate objects and avoid the many pitfalls (pun intended) that await you in Labyrinth.

ASYLUM

Price £13.75 cassette

You are sitting alone at 2 am. Your eyes are bloodshot as you peer into your computer's screen and cry, "I must be CRAZY!" If this has never happened to you, you've never tried ASYLUM. It's Med Systems most ambitious 3-D graphics adventure yet!

ASYLUM places you on a cot in a small (padded?) room. Periodically the janitor lobbs a hand-grenade through the window. What you do next could mean escape — or disaster.

**Buy our
£475*
Electronic Typewriter
and you have a
Daisy Wheel Printer
for your computer
absolutely FREE**

The T/Printer 35 is a superb portable typewriter that also doubles as a computer printer. It's the first electronic typewriter that's truly portable (it weighs only 17 pounds and is supplied with an ABS carrying case) and has all the features you'd expect of an electronic office typewriter. Except price.

Features include self-correction, dual function 100 character keyboard, triple pitch (10, 12 and 15 characters per inch), up to 12 in. wide paper—all with excellent print quality. And with Olivetti reliability.

Best of all, when you're finished using it as a typewriter, it's all set to go to work as a word processing quality computer output printer.

That makes the T/Printer 35 about the most versatile and cost effective piece of equipment you can buy. You get all the advantages of having a daisy wheel printer *and* electronic typewriter in a compact unit. And at one low price of £475*, including carrying case.

**The T/Printer 35 costs £475 with Centronics compatible parallel interface. With RS-232C interface it costs £535. Prices listed are exclusive of VAT.*

**Datarite Terminals Ltd
Caldare House
144-146 High Road
Chadwell Heath, Essex RM6 6NT
Tel: 01-590 1155**

**Buy our
£475*
Daisy Wheel Printer
for your computer
and you have an
Electronic Typewriter
absolutely FREE**

The T/Printer 35 is the lightest weight and lowest cost daisy wheel printer you can buy for your computer. So it will fit within your budget and you can carry it wherever you take your micro. Yet it is tough enough to give years of reliable service. Interchangeable typefaces (standard Olivetti 100 character daisy wheels), variable pitch, multiple copies—all the features you would expect of more expensive word processing printers.

Yet the T/Printer 35 costs only £475 with parallel interface. Operating speed under computer control is approximately 120 words per minute of letter perfect output. What typist can equal that?

Then when you're finished using it as a computer printer, the T/Printer 35 is ready to go right on working as an electronic typewriter.

That's the dual-purpose T/Printer 35—the versatile computer printer that fits your budget.

Orders are shipped within the UK carriage-free. To order or for more information about the T/Printer 35:

1. FRUIT MACHINE:

This is a computer version of the popular "one armed bandit", with three reels, Nudge reel, and Hold, Nudge and Gamble functions. Incorporating the VIC's normal graphics, colour and sound, it requires an expanded VIC (3/8/16K).

2. BRICKDOWN:

A variation on the game "BREAKOUT"; using the keyboard or a joystick controller manoeuvre the bat to try to break through the right hand wall, while protecting the left wall. Requires basic or 8K VIC.

3. BLOCKADE:

Using joystick or keyboard, control your missile base to destroy incoming enemy missiles and protect your fuel dumps. Game ends when you are hit or all fuel dumps destroyed. Uses defined graphics, colour + sound. Runs in basic VIC only.

4. ROULETTE:

Complete with accurate full colour "MONTE CARLO" roulette table, you can break the bank without risk of personal loss! Complete with list of odds and allowed bets, you are given £5,000 to play with. Game ends when you lose your shirt. Runs in any VIC, with colour and sound.

5. HANGMAN:

Play the computer at this version of the popular pen + pencil game. The VIC has a built-in vocabulary of 50 words, to which you can Add, Delete or Replace your own words. Addictive, with colour + sound. Runs in any VIC.

6. TARKUS:

With the joystick or keyboard, control the stretcher bearers to pick up the wounded men, and return them safely to the red cross base. If you are hit by an enemy missile, however, you join the wounded, on the field! Challenging and addictive, with defined graphics, colour + sound. Runs in basic VIC only.

CODE EXPANDS TO FIT THE SPACE AVAILABLE

When developing a system you know how one good idea follows another until CRUNCH, the system has run out of store. Then good ideas have to be sacrificed to make the system fit onto the available hardware, and your skills have to be diverted to finding compromises and making unsatisfactory choices.

IMAGINATION BECOMES PRACTICAL WITH BCPL CINTCODE

Imagine being able to compress your code effortlessly into half the space it now uses, the result would be a better, more comprehensive, and more competitive system - often developed in less time.

Imagine having the power and freedom of assembler in a high level language which is easily transferred to new computers.

Imagine using better development aids than those normally available on mainframe computers.

A WELL DESIGNED PRACTICAL LANGUAGE

BCPL is a modern well structured language, easy to learn, easy to write and easy to read. It is related to Algol and Pascal, but is particularly strong in solving the practical problems of real computer systems. Thus BCPL specifies input and output, provides for separate compilation, and supports very efficient implementations. Portability was an important part of the language design, and the availability of inexpensive and convenient conversion aids has led to compatible implementations on many different processors.

The language provides a basic framework of operations which can be adapted to any application by the declaration of procedures. The simplicity of the underlying structure ensures that BCPL requires little overhead. But in keeping with the practical nature of the language, a range of useful standard routines are defined, in particular for input and output.

BCPL CINTCODE is a new implementation of standard BCPL specifically for Microcomputers. It has been carefully designed to hold the logic of a program in a minimum number of bytes. This releases store and disk for more code and data. Tests show that CINTCODE requires only a third the space of fully compiled code, and that it is significantly more compact than other language systems.

CINTCODE is freely relocatable and links at runtime. This means that common procedures used by several tasks need only be stored once. It is distributed with 94 useful procedures, which include all those normally provided in BCPL implementations.

The debugging aids provide breakpoints, symbolic traces, displays of the sequence of calls leading to an error, etc. in a way which is easily related to the high level source code.

BCPL CINTCODE supports multitasking and overlays under CP/M in a simple and effective way.

The full BCPL CINTCODE development system on CP/M is £250, the User Manual is also available separately for £35. Licences for the interpreter and libraries on target systems are only £20. Products developed in CINTCODE under CP/M can also be run on Apples and other 6502 processors.

RICHARDS COMPUTER PRODUCTS LTD, Brookside, Westbrook St., Blewbury, Didcot, Oxon. 0235-850218

RCP

THE TRANSTEC 1200 VIDEO MONITOR.

At last, a top quality green screen 12" video monitor at a really competitive price.

The Transtec 1200 has a composite video input, compatible with all micro computers and the screen gives a crisp read-out of a full 80 columns.

The unit is housed in a durable plastic cabinet with controls neatly concealed behind a hinged front-access panel.

Why pay more? Send the coupon today for full specification or better still, call us direct in Bristol.

*Dear
Computer Dealer,
We may well have
obsoleted your present
micro computer dealership.*

The CP/M Z8
based PRINCE

If your present micro supplier:

1. Does not carry a seven year maintenance guarantee.
2. Is not supported by an established British manufacturer with over 16 years computing experience.
3. Does not offer your users a growth capability.
4. Does not offer a minimum interruption plan during breakdown.
5. Does not provide comprehensive support for its dealers.

– then you could well be dealing with the wrong supplier.

We are looking for professional distributors of our latest micro computer system – THE PRINCE.

Your micro checklist

- **First class dealer support.**
We provide comprehensive sales support – sales expertise, local seminars, exhibitions, publicity, sales aids, training and consultancy.
- **Provides for growth**
By linking you to powerful mini systems and permit you to develop a real big system capability.
- **Maintenance for seven years**
Offering a **seven year** maintenance guarantee* the Digico Prince provides the 'coming of age' seal to the micro industry.
- **Backed in Britain**
Digico Computers have been in the business of computer hardware design, manufacture and maintenance for over sixteen years. With factories in Leeds and Stevenage, the Prince is fully supported in the United Kingdom.
- **Excellent value rental scheme**
For complete turnkey systems which include maintenance. (Dealer commission paid up front in full)
- **Minimum Interruption Plan (MIP)**
If your Prince goes down, we'll exchange it for a replacement to keep you running – **all** in the rental price!
- **Keep up with technology**
Digico Computers have enabled their users to keep pace with technology since 1966.
- **Ready made accounting**
No development cost – just buy proven packages covering sales, purchase and nominal ledgers plus stock control, order entry, payroll, word processing, full graphics and supercalc.
- **Ideal for new computer users**
Maximise their learning on a minimum investment and then link them up to larger systems when they're fully familiar and ready to grow.

We're looking for the sort of distributor that can sell a real business machine and not leave the user to the mercy of a plaything.

* Providing there is a maintenance contract continuously from new

AS THINGS GET TOUGH

As a man thinketh, so he will be
This is a major breakthrough programme in human development disciplines which is destined to effect the lives of thousands of thinking men and women. It engages a remarkable new concept — **A MULTI-DIMENSIONAL APPROACH TO HUMAN SUCCESS AND TOTAL ACHIEVEMENT**

WHAT DO YOU DESIRE? UNFORTUNATELY, THIS PROGRAMME CAN ONLY OFFER TOTAL WINNING KNOWLEDGE, THE BASIC ELEMENT SO ABSOLUTELY NECESSARY FOR POSITIVE HUMAN DEVELOPMENT.

A must for the Listening Library of every thoughtful man and woman
GROWTH and RENEWAL

SELF-REALIZATION

A lesson in winning — Broadside 1 is not a psychological gimmick but a profound professional in-depth study into the attitudes and the qualities that go into the formation of the total winner. It is a programme based upon years of exhaustive research, using clinically controlled feedback studies, into the ever present human desire for success and achievement as the basic motivating winning force that brings men and women alike to the forefront of our society. It is a unique and masterful attempt to define and to formulate into a controlled audio pack, the exact guide lines for creating the winner.

The motivated need

Have you ever given thought as to why some people are more successful than others? The secret of the successful lies in direct relation to their positive attitudes and their defined purpose control.

ACTION

Each unit of human life is composed greatly from dreams derived from the unconscious. He who has the ability and know-how to translate them into positive reality, will truly be placed amongst the great. **Anais Nin**

BROADSIDE 1 — THE INSTRUMENT OF HUMAN DEVELOPMENT

ANGLO AMERICAN SOFTWARE CO

BBC — TRS-80 — ATARI — PET — APPLE — VIC — ZX81

We know what it is like out there, because that's where we came from. Before we decided to become software entrepreneurs, we were just like you enthusiasts searching through magazines for the ideal mail order software source. What we hoped to find was a single entity that offered an ultra-wide selection for our micro-computer. That pre-selected only the best of many similar sounding programs that reached the market every month. That could give us personal assistance with the purchase-decision process, and that stood behind its products. When we couldn't find it we decided to become it. So ANGLO-AMERICAN SOFTWARE CO WAS BORN.

COSMIC PATROL

Skilled players soon master many difficult computer games, but COSMIC PATROL is in a world all its own. The challenge intensifies! Supporting graphics and sound (optional) make each encounter an exciting new experience. It all adds up to a Super 3-S package ... Skill, sight and Sound.

The Cosmic Patrol program is not just another search and destroy game. With its fast, real-time action, impressive sound option and superb graphics, this machine-language program is the best of its genre.

PRICE £12.50

DISK £16.25

BATTLEGROUND

Here is a program that should interest you war-gamers:

It is late 1944, and the Allied Forces are sweeping towards Berlin. As General of your sector, you have at your command tanks, planes, artillery, infantry, engineers and vehicles — an awesome array of fighting men and the machines of war. From intelligence reports you know that the enemy General is a shrewd tactician, not to be underestimated. It will take planning and strategy to outwit this wily old campaigner.

The battle map of your sector will fill with markers, each showing the deployment of your forces. You and another player will slip into the roles of opposing German and American commanders as yet another battle unfolds. Battleground allows you to experience the total responsibility of a battle-area command. It will be up to you to deploy your forces. On your shoulders rests the decision whether to call for direct artillery gunfire or to order your planes into the air. You will constantly be watching for an enemy airdrop, always carefully manoeuvring your forces.

The stark reality of World War II comes alive in BATTLEGROUND.

PRICE £8.00

CASSETTE

PROGRAM OF THE MONTH

TLDIS & DLDIS

You've bought a super machine-code program but now wonder how it works. Maybe you even used a quick PEEK routine to glance through it when it was in memory. If so, you definitely noticed the complete lack of comments in the code, making it almost impossible for you to decipher and understand it.

Well Instant Software's Labelling Disassemblers are the answer to your problem.

TLDIS (Tape-based Labelling DIS-assembler) make three passes to assign labels (where appropriate) to the routines in a machine-language program. Their output is almost identical in that of a hand-assembled source code.

You can send the disassembly to a line-printer (Radio Shack parallel port) for either TLDIS or DLDIS. (The difference between these utilities is the storage mode of the disassembly).

TLDIS can send the disassembly to cassette tape. DLDIS can send it to disk: both send it to the video monitor. The stored disassembly from TLDIS may be reassembled with Radio Shack's EDTASM™ — the disassembly from DLDIS with Apparat's extension of EDTASM™. Because of the use of labels it is a simple matter to change any object code program by disassembling it and then making changes to the resultant source code, without losing track of jump/load addresses. Labels start with "AA00" and increment up in even numbered steps (AA02, AA04, etc.). The odd numbers (AA01, AA03, etc.) are left for you to use for the source code during reassembly.

The printing of the disassembly may be temporarily halted by using (SHIFT) @ (just as in BASIC) or it may be ended by pressing the (BREAK) key. It also has a comments column to display ASCII characters used in a LD or CP opcode.

TLDIS and DLDIS may be relocated in memory to avoid conflict with the program you disassemble.

The next time you need to "climb inside" a machine-code program, take DLDIS or TLDIS with you. We promise that it will be an easier journey.

TLDIS £11.50 Cassette

DLDIS £15.50 Disk

THE ALL STARS

Here's a collection of our best selling games ... the ones you'll want to play again and again. It includes: SANTA PARAVIA AND FIUMACCIO — Become the ruler of a medieval city state as you struggle to create a kingdom. Up to six players can compete to see who will become the King or Queen.

OIL TYCOON — Avoid oil spills, blowouts and dry wells as you battle to become the world's richest oil tycoon. Two players become the owners of competing oil companies ... and there's room for only ONE at the top!

PARADISE TRADER — You're the captain of a trading schooner, sailing the Caribbean in search of profits. As you sail from island to island beware the dangers of the deep: pirates, ghost ships and hurricanes. Good sailing, skipper!

MILLIONAIRE — Here's \$1000. Can you turn it into a million dollars in fifteen (simulated) years? It depends on your strategy as you buy and sell properties, negotiate bank loans, collect rentals and accept sealed bids.

TIMBER BARON — An in-depth experience of the timber business, from dropping trees, until the milled lumber reaches the market. Your transactions are affected by those unexpected eventualities that can upset even the most careful plans.

BATTLEGROUND — European Theatre, 1944: Your forces command are tanks, planes, artillery, infantry, engineers and vehicles. The battle map will fill with markers showing the development of your forces and the location of the enemy in one day of fighting. This two-player game will provide hours of entertainment.

Price £26.50 Disk

DOCTOR CHIPS

DR. CHIPS is a great icebreaker at cocktail parties. And if the need arose, he could entertain your early arriving guests while you finished dressing! Your friends will be asking you how the guy got into the computer.

Why shoulder the burdens of modern life in silence? Put your DR CHIPS to work today and get it all off your chest!

SEE VIC AT THE INTERNATIONAL
COMMODORE COMPUTER SHOW,
CUNARD HOTEL, HAMMERSMITH,
3rd-5th JUNE.
3rd June 12 noon-6pm. 4th June 10am-6pm.
5th June 10am-5pm.

"Give me one good reason why I should choose a VIC 20 home computer."

1. VIC is outstanding value for money. No other colour home computer can give so much for under £200.

2. Total standard memory 128K made up of 20K ROM and 108K RAM.

3. Fully expandable to 27½K user RAM.

4. Microsoft Basic interpreter as standard.

5. Accessible machine language via plug-in cartridges.

6. Connects direct to monitor or standard television.

7. Full size typewriter style keyboard.

8. Full colour and sound.

9. All colours easily accessible.

10. 62 predefined graphic characters direct from the keyboard.

11. Full set of upper and lower case characters.

12. 256 displayable characters direct from the keyboard.

13. High resolution graphics capability via plug-in cartridges.

14. Programmable function keys can be used with plug-in cartridges.

15. Automatic repeat on cursor function keys.

16. User-definable input/output port.

17. Machine bus port for memory expansion and ROM software.

18. Standard interfaces for hardware peripherals.

19. VIC 20 is truly expandable into a highly sophisticated computer system with a comprehensive list of accessories (see panel below).

20. Full range of software for home, education, business and entertainment on disk, cassette and cartridge.

21. Books, manuals and learning aids from Teach Yourself Basic to the VIC programmers' reference guide (a must for advanced programmers).

22. Full support for VIC owners – their own magazine 'VIC Computing' as well as a national network of VIC user groups.

23. National dealer network providing full service and support to VIC owners.

24. Expertise and experience – Commodore are world leaders in microcomputer and silicon chip technology.

25. Commodore is the leading supplier of micro computers in the UK to business, schools, industry and the home.

26. VIC 20 is the best-selling colour home computer in the UK.

How many reasons was it you wanted?

Accessories include:

- Cassette tape unit.
- Single drive 5¼" floppy disk unit (170 K bytes capacity).
- 80-column dot matrix printer.
- 3K, 8K and 16K RAM expansion cartridges.
- Programming aid packs; machine code monitor cartridge, programmers' aid cartridge, high resolution graphics cartridge.

• Plug-in conversion box for a full 32K, 40-column x 24 lines VIC including Prestel compatibility.

- RS 232C communication cartridge.
- Memory expansion board.
- IEEE/488 interface cartridge.
- Joysticks, light pens, paddles and motor controllers.

 **commodore**

EPSON'S NEW TYPE III simply out of this world

Epson's new Type III series brings quality graphic printing within the price range of alphanumeric users for the first time.

The MX-80, MX80F/T and the MX-100 offer high reliability, improved performance and greater flexibility.

Performance of the MX-100 has been boosted to 100 cps, and the MX-80 and MX-80F/T each give 80 cps. New features include super and subscript, underlining, deletion and italics. Users can select a unidirectional print mode and system reset.

High resolution printing quality is from a 9 x 9 dot matrix head, and a wide range of type sizes is available. Other user benefits include an easy-change cartridge ribbon, and quiet operation.

All three are equipped with a full 96-character ASCII set, with descenders. The standard interface is Centronics-style 8-bit parallel, with optional RS 232 or IEEE 488 ports.

Epson ...Simply out of this world.

SATURN SYSTEMS

128K and 32K boards and VC— Expand The 32K BOARD

Comes with utilities to allow the movement of DOS and the use of Integer together with the ability to store subroutines on the board to be called from a main program. The final utility allows the board or multiple of boards to be used as a fast disk drive

£149.00

128K BOARD

Can be used as above with the additional facility to use the card as a fast disk drive in C/PM and PASCAL in addition to BASIC

£359.00

VC EXPAND

Is a utility that can be used with either the above two boards to give additional memory for VISICALC models, up to 146K with the 128 board—and more with additional boards

£55.00

COMING SOON

A version of VC EXPAND to allow use of VISICALC with the VIDEK 80 column board (VIDEX 80 column board—£185.00) (VISICALC—£105.00)

MICROSOFT PRODUCTS

MICROSOFT have written most of the **BASICs** for the World's Micros. As MICROSOFT'S biggest UK distributor we carry a wide range of MICROSOFT products for APPLE

TASC the Applesoft computer

True machine code programs for your APPLESOFT BASIC

£109.00

Z-80 SOFTCARD

THE C/PM System for APPLE. Over 35,000 sold to Apple users world-wide, making APPLE the most popular C/PM system

£189.00

A.L.D.S.—Assembly Language Development

System can handle 6502, Z-80 or 8080

£79.00

FORTRAN 80 £109.00

COBOL 80 £359.00

THE ENHANCER II

The dawn of a new era for the APPLE II Introducing the ENHANCER II—a new standard which is improving the relationship between Humans and Apples. The Enhancer II can help your Apple II's keyboard become more sociable by remembering words or phrases which can be entered into the Apple by the mere touch of a key. Life can become even easier because the Enhancer II can remember what you typed while your Apple was busy talking to your disk (or doing other things). Naturally, it knows the difference between upper and lower case letters and what shift keys are supposed to do. It even knows to auto repeat any key held down. The Enhancer II replaces the encoder board making installation simple.

£99.00

PETPAM G

When you outgrow your personal computer that's the time you'll wish you'd bought a DAI.

Very low priced personal computers can leave you feeling very low, after the initial novelty has worn off. Having learned what the computer can do, you then find out what it can't do. Unless you expand the system. And that can set you back a few hundred pounds for items such as extra RAM and serial interface. In fact, more than you paid in the first place! So when you've done all the sums, you'll realise that the DAI personal computer offers incredibly good value for money. Just look what you get for the all-in price.

1. 48K RAM.
2. 24K ROM-based software that includes a fast BASIC interpreter, scrolling screen editor, machine code utility program, twin cassette tile handling, and disc support.
3. A full duplex RS232 serial interface allowing direct connection of a printer (with resident software support) and other peripherals.
4. A parallel interface for connection of the CP/M compatible DAI disc unit and other user devices.
5. Superb 16-colour high resolution graphics (256 x 336).

6. Sound commands for music generation.
7. Standard TV interface via aerial socket.

These standard features pave the way for a whole new vista of personal computing possibilities. Find out more by completing the coupon today. Large range of "Dainasoft" software available, e.g. viewdata, word processing, educational, games . . .

ACT Sirius 1

NEW ACT SIRIUS 1

Minicomputer Performance. Personal Computer Price.

16 bit processor: £2,395

The best price/performance ratio you've ever seen on a personal computer.

	ACT Sirius 1	Typical Personal Computers	Typical Business Systems
Memory	128K-1024K	32K-64K	48K-256K
Disk Capacity	1.2Mb-10 Mb	140K-1Mb	1.2Mb-10 Mb
Processor	16 bit	8 bit	8 bit
Operating Systems	CP/M-86, MSDOS	CP/M or Machine Specific	Usually Machine Specific
Languages	Microsoft BASIC Compiled BASIC COBOL PASCAL FORTRAN	Microsoft BASIC perhaps one or two others, eg PASCAL	BASIC and perhaps one or two others
Price	£2395	£1800-£3000	£4500-£8500

ACT Sirius 1 is a new generation personal computer. Quite simply, it has no competition at the price.

It's the first personal computer developed from the outset for business and professional use.

It's launched with more software than anything before it.

It's supported and distributed solely by ACT — the biggest name in personal computer software.

And it's developed by Chuck Peddle, formerly of Commodore and generally regarded as the father of personal computing.

SOFTWARE SPELLS SUCCESS

ACT Sirius 1 has more software than any other personal computer:

A choice of two operating systems — CP/M-86 or MSDOS, from Microsoft.

or Software Houses

The ACT Sirius 1 has a language for you. Microsoft BASIC 80, two BASIC Compilers, two COBOLS, PASCAL and FORTRAN.

or Applications

Wordstar, Mailmerge, Pulsar, SuperCalc and MicroModeller — all the best sellers.

And the ACT Sirius 1 can run any software written for CP/M — that means hundreds of specialised packages.

THE BODY IN QUESTION

Ergonomics play a vital part in the design of ACT's Sirius 1.

The screen tilts and swivels to suit the user and glare is eliminated.

The display is razor sharp; and the brilliance and contrast can be adjusted using keys on the low-profile detachable keyboard.

STAYING OUT IN FRONT

The ACT Sirius 1 is designed to keep you out in front. Winchester, networks, multi-user facilities and colour graphics are all scheduled during the next twelve months. And all at the same record-breaking price levels of the ACT Sirius 1.

SEEING IS BELIEVING

The ACT Sirius 1 goes through the most exhaustive quality control process of any microcomputer — including the much vaunted Japanese products.

ACT Sirius 1 has been successfully operating in testing field trials for over 6 months already. And now it's at your nearest ACT Dealer — ready to revolutionise your ideas on personal computers.

Clip the coupon for literature. Better still, call David Low now on the hot line 021-454 8585, get the name of your nearest dealer and see a demonstration as soon as you can — because seeing is believing.

To: ACT (Microsoft) Ltd, FREEPOST,
Birmingham B16 8BR.

☐ Please send a brochure and name of my nearest dealer

☐ I am interested in dealership — send the dealer pack and ask your sales director to contact me.

ACT No.1 in Total Computing.

Two flexible multi-user systems

The Vector Graphic 5005

and 5032

with 5 megabyte and 32 megabyte Winchester hard discs

The Vector Graphic 5005 & 5032 are multiple-user, multi-tasking hard disc systems for general business and word processing applications.

Supporting up to a maximum of 5 users and giving up to 32 megabytes of high-speed totally reliable Winchester disc technology with Vector's automatic error correction feature.

Total flexibility means that the systems terminals can work independently which permits the widest possible range of usage.

One user could use Execuplan for financial planning whilst the second user is entering sales information with accounting software and the third may run correspondence simultaneously with Vector's Memorite III word processing software.

Most other standard CP/M

compatible applications software will run on the system e.g. COBOL, FORTRAN, PASCAL, BASIC COMPILER, ALGOL, PL/I and other statistical and data based management packages.

The Vector Graphic 5005 & 5032 are ideal for application packages, such as accounts, stock control, payroll, word processing, financial modelling and solicitors packages, all available from Almarc.

For further information write or telephone Almarc. Complete sales and servicing facilities are available throughout the U.K.

PERSONAL PEARL

PURPOSE

To provide a natural, easy way for people to create custom application programs through an English language interaction with a personal computer.

DESCRIPTION

Personal Pearl is the natural, human way to create new computer solutions. Computers are designed to solve general problems at incredible speeds. Application programs are required to operate the computer in order to quickly solve specific human problems. Personal Pearl unlocks the power of the computer so you can resolve your unique business problems.

Personal Pearl asks you for examples of the results you require from the computer. Personal Pearl then produces the application program. Personal Pearl is for the individual who requires custom computer solutions without the cost and time delay of hiring a programmer.

With Personal Pearl, you can create a library of personal programs, each tailored to your individual requirements. Accounting, mailing lists, data files, data management, calculations and reporting. Personal Programmer builds the program library of your choice, for one price.

Why buy several programs designed for the average computer use? Buy Personal Pearl to create an entire library of the highest quality programs designed by you, for your Personal Pearl leads you through the program design. Your answers are used by Personal Pearl to create the new program.

HIGHLIGHTS

- Interactive English program development. Menu-oriented application description speeds development via formatted screens, input error checking.
- Built in HELP facility.
- Display handling is defined by using Personal Pearl convenient full-screen facilities to simply type in the display screens exactly the way they are to appear in the new program.
- Report handling is defined in the same way; by simply formatting the display screen to show the layout of the reports required by the new program.
- The application program display screens or reports may be modified at any time, or new displays or reports may be added.
- Calculation edit: arithmetic operations, editing, translation, table look up, and data validation are included.
- Data routine: display-to-display, display-to-printer, and display-to-file facilities are provided.
- Files may be quickly and easily sorted, printed, searched for selected records, reorganised or analysed.
- Display screens, files or reports may be modified to reflect changing program requirements.
- Display screens may be custom designed in any form.
- Reports may be custom designed in any form. Several report formats may be stored for later use.
- Data may be sent to 'SuperCalc*' or 'Multiplan*' for forecasting.
- No limitation on number of application programs.
- Maximum file sizes determined only by the maximum capacity of the disk storage medium on the computer.
- Records may be up to several thousand characters long, if needed.
- The number of records that may be stored in a file is determined by the total file size. Records are variable length with record packing, eliminating the wasted space incurred by fixed length schemes.
- Data base support is provided by an independent data base manager.
- File support is provided through indexing and sequential data access.
- Security and Integrity of Data:
 - Data input can be validated against previously defined edit criteria before changes are made to data files.
 - Edit criteria can be modified dynamically.
- Automatic Screen Entry Message:
 - Users of Personal Pearl can establish messages to the program operator in order to direct correct data entry.
- Data File Independence:
 - The descriptions of data files are maintained in an independent description file — the dictionary.
- Multiple Program Integration
 - Several generic programs such as word processing and spread sheet analysis may be integrated through Personal Pearl.

WE ARE NOW STOCKING THE APPLE II AT REDUCED PRICES

Getting Started APPLE II is faster, smaller, and more powerful than its predecessors. And it's more fun to use too because of built-in features like:
● **BASIC** — The Language that Makes Programming Fun.
● **High-Resolution Graphics** (in a 54,000-Point Array) for Finely-Detailed Displays.
● **Sound Capability** that Brings Programs to Life.
● **Hand Controls** for Games and Other Human-Input Applications.
● **Internal Memory Capacity** of 48K Bytes of RAM, 12K Bytes of ROM; for Big-System Performance in a Small Package.
● **Eight Accessory Expansion Slots** to let the System Grow With Your Needs.

You don't need to be an expert to enjoy APPLE II. It is a complete, ready-to-run computer. Just connect it to a video display and start using programs (or writing your own) the first day. You'll find that its tutorial manuals help you make it your own personal problem solver.

APPLE DISC II 3.3 Dos

Disc with Controller
£339 + VAT
Additional Drives
£289 + VAT

● Powerful Disk Operating Software Supports up to 6 drives ● Name Access to Files for Ease of Use ● BASIC Program Chaining to Link Software Together ● Random or Sequential File Access to Simplify Programming ● Dynamic Disk Space Allocation for Efficient Storage ● Individual File Write-Protection Eliminates Accidental File Alterations ● Loads an 8K Byte Binary Image in 6.5 sec. (1.2 sec. in Pascal) ● Storage Capacity of 116 Kilobytes (143K Bytes with Pascal) on Standard 5 1/4" Diskettes ● Powered Directly From the APPLE (Up to 6 Drives) for Convenience and High Reliability ● Packaged in Heavy-Duty, Colour-Coordinated Steel Cabinet
Colour Monitors for Apple — £295 + VAT

LUXOR 14" COLOUR MONITOR FOR THE APPLE

£295 + VAT

THE EPSON MX SERIES

MX80T £339 + VAT
MX80F/T £389 + VAT

- 80/132 Column
- Centronics Parallel
- Bi-directional
- Upper & lower case
- True Descenders
- 9x9 Dot Matrix
- Condensed and Enlarged Characters
- Interfaces and Ribbons available

CENTRONICS DOT MATRIX PRINTERS

737 £369 + VAT
739 £469 + VAT

Standard Features

- Proportional Spacing ● Right Margin Justification ● 3 way paper handling ● Upper and lower case ● True Descenders ● Bi-directional Paper Mode ● Underlining capability ● Condensed/Expanded Print ● Sub-Scripts and Super Scripts ● Pin and Friction Feed ● 80/132 Column

739 as above with special feature of Dot Resolution Graphics.

NEC SPINWRITER

only £1490 + VAT

NEC's high quality printer uses a print "thimble" that has less diameter and inertia than a daisy wheel, giving a quieter, faster, more reliable printer that can cope with plotting and printing (128 ASCII characters) with up to five copies, friction or tractor fed. The ribbon and thimble can be changed in seconds. 55 characters per second bidirectional printing — with red/black, bold, subscript, superscript, proportional spacing, tabbing, and much, much more.

HITACHI PROFESSIONAL MONITORS

9" — £129 £99.95 + VAT
12" — £199 £149 + VAT

- **Reliability** Solid state circuitry using an IC and silicon transistors ensures high reliability. ● **500 lines horizontal resolution** Horizontal resolution in excess of 500 lines is achieved in picture center. ● **Stable picture** Even played back pictures of VTR can be displayed without jittering. ● **Looping video input** Video input can be looped through with built-in termination switch. ● **External sync operation** (available as option for U and C types) ● **Compact construction** Two monitors are mountable side by side in a standard 19-inch rack.

ACORN ATOM UNIQUE IN CONCEPT — THE HOME COMPUTER THAT GROWS AS YOU DO

Fully Assembled £157.50 + VAT inc. PSU

Special features include ● Full Sized Keyboard ● Assembler and Basic ● Top Quality Moulded Case ● Optional High Resolution Colour Graphics ● 6502 Microprocessor

4K FLOATING POINT ROOM

£19.50 + VAT
COLOUR ENCODER £19.00 + VAT

We give a full one year's guarantee on all our products, which normally only carry 3 months guarantee.

One Expander Card for apple leads to another....

In fact it leads to many others! Joining the amazing success of our PAL Encoder Card, these four new expander cards all featuring the unique 'Digitek Safety Tab' are ready to plug straight into your Apple Computer.

PAL Colour Encoder Card £105 This amazing card with its on-board modulator, displays exceptional colour graphics to your TV.

16k Ramcard £91 Insert the card straight into slot 0, and increase the memory capability of your Apple without having to remove any memory chips.

Z80 Expansion Card £110 Installing the Z80 into your Apple gives you two systems in one, which enables you to run the popular C/P/M operating system.

RS232 High Speed Serial Interface £72 The RS232 Interface Card incorporates 13 selectable Baud rates from 75 to 19,200.

Print-master Interface £79 The ultimate parallel interface for Apple to all popular dot matrix printers.

The PRINT-MASTER accepts Apple protocols, 15+ software commands and has on-board graphics dump capability to all popular graphics printers. No need to load clumsy software routines - it's all at your fingertips on the PRINT-MASTER - choice of inverse printing, double size picture, 90° picture rotation, many word processor type text commands, plus many more.

Apple is the trademark of Apple Computers Inc. Digitek and Print-master are the trademarks of Digitek (International) Ltd.

Dealer enquiries welcome

Genie III...

your third and greatest wish!

The new Genie III surpasses even its predecessors by harnessing all the benefits of modern, professional microcomputing in one unit.

Versatility.

Software availability is exceptionally good – in fact the Genie III has more software available than any of its competitors. And even if you don't want to use a ready made business package, with the Genie III you can write your own! The Genie III is fully operational in either CP/M, or level II basic. It has a built-in screen, 64K RAM, and dual disk drive with 730K storage capacity, all incorporated in its compact and attractive casing.

Speed.

The new Genie III is an obedient slave in the office, quickly and quietly taking care of all your routine work, from printed invoices, mailing lists and letters to stock control.

Economy and simplicity.

It all costs less than a new office junior, yet it's simple enough to operate, and comes complete with a teaching programme to show you how.

Reliability.

Your Genie III is reliable too, manufactured to the most stringent standards with top quality

components. And even in the unlikely event that your Genie should ever temporarily fail to please you are assured of very fast, competent service because the Genie III is only available from our specially selected SUPERDEALERS. Dealers whose technical expertise and experience in the fields of installation, software availability and repair is proven.

Software.

Finally, it's compatibility with CP/M or Level II BASIC means there is more Software available for Genie III than any other comparable system!

Please send me FREE, 16 page colour brochure on the Genie Computer System. I enclose 25p postage.

TeleVideo

TS 802 Series

TeleVideo's TS 802 and TS 802H microcomputers are low-cost, powerful single-user integrated computer systems. TeleVideo has combined its top of the line CRT display with an advanced design single board computer (Z80, 64K RAM) with 5¼ floppy disks and Winchester hard disk all in one attractive tabletop enclosure. A detached typewriter-style keyboard is also included. The TS 802 computer features two 5¼-inch Winchester disk drive for 10 Mbytes of data storage, and a single 500 Kbyte minifloppy disk unit.

Both the TS 802 and 802H use the industry standard CP/M 2.2 operating system. This lets the user fulfill a wide variety of information and word processing needs using a multitude of commonly available application programs.

The TS 802 and TS 802H can accommodate serial printers and modems through the RS-232C serial ports.

When it comes time to expand to a multi-user system, you can utilize either your TS 802 or 802H as a satellite user station in the overall system without modification.

TS 802 & 802H Features:

- Z80A 4 MHz processor with direct memory access
- 64 Kbytes of RAM main memory
- 4 Kbytes of EPROM for system diagnostics and boot loading
- Dual floppy disk controller (TS 802), and hard disk controller (TS 802H)
- Dual minifloppy disks: 1 Mbyte capacity (TS 802) Single minifloppy disk (.5 Mbyte capacity), plus 10
- Mbyte Winchester 5¼-inch hard disk (TS 802H)
- Green phosphor CRT (25 rows by 80 columns)
- Typewriter-style detached keyboard
- Full-screen attributes, editing, smooth scroll, 25th status line, 11 function keys, numeric key pad

COMPUSTAR™ /CORVUS

Functional characteristics

The CompuStar 10 megabyte Disk Storage System (DSS) consists of read/write and control electronics, read/write heads, a track positioning mechanism, a spindle drive mechanism, dual disks, an air filtration system, and our exclusive 255 user controller — all packaged in a compact desktop enclosure. Although designed primarily to accommodate multiple CompuStar Video Processing Units (described at left), the unit can easily be connected to a single SuperBrain Video Computer System to facilitate additional disk storage. When used with CompuStar VDU's, however, the integral Z80 based controller will permit up to 255 users to 'share' the resources of the disk with minimal CPU response degradation.

Read/Write Heads and Disks

The recording media consists of a lubricated thin magnetic oxide coating on a 200mm diameter aluminium substrate. This coating for mulation, together with the low load force/low mass Winchester type flying heads, permits reliable contact start/stop operation. Data on each disk surface is read by one read/write head, each of which accesses 256 tracks.

- 2 RS-232C serial ports. These are jumper selectable for any combination of modems or printers
- CP/M 2.2 operating system
- Attractive tabletop enclosure, fully integrated with CRT, CPU, RAM and disk drives
- 1 RS-422 high-speed port

GW Computers Ltd

SUPERBRAIN™

SuperBrain users get exceptional performance for just a fraction of what they'd expect to pay. Standard SuperBrain features include: two double density mini-floppies with 350k bytes of disk storage, 32k of RAM memory (expandable to 64k) to handle even the most sophisticated programs, a CP/M® Disk Operating System with a high powered text editor, assembler, debugger and a disk formatter. And, with SuperBrain's S-100 bus adaptor, you can add all the programming power you will ever need. . . almost any type of S-100 compatible bus accessory.

SuperBrain's CP/M operating system boasts an overwhelming amount of available software in BASIC, FORTRAN, COBOL, and APL. Whatever your application. . . General Ledger, Accounts Receivable, Payroll, Inventory of Word Processing, SuperBrain is tops in its class. And the SuperBrain QD boasts the same powerful performance but also features a double-sided drive system to render more than 700k bytes of disk storage and a full 64k of RAM. All standard!

Whatever model you choose, you'll appreciate the careful attention given to every engineering detail. A full ASCII keyboard with numeric pad and user-programmable function keys. A non-glare, specially focused 12-inch CRT for sharp images everywhere on the screen. Twin Z-80 microprocessors to insure efficient data transfer to auxiliary peripheral devices. Dual universal RS-232 communications ports for serial data transmission. And, a single board design to make servicing a snap!

ADVANTAGE

Integrated Desk Top Computer with 12 inch Bit-Mapped Graphics or Character Display, 64Kb RAM, 4 MHz Z80A, 2 Two Quad Capacity Floppy Disk Drives, Selectric® Style 87 Key Keyboard, Business Graphics Software.

The North Star ADVANTAGE™ is an interactive integrated graphics computer supplying the single user with a balanced set of Business-Data, Word, or Scientific-Data processing capabilities along with both character and graphics output. ADVANTAGE is fully supported by North Star's wide range of System and Application Software.

The ADVANTAGE contains a 4 MHz Z80A CPU with 64Kb of 200 nsec Dynamic RAM (with parity) for program storage, a separate 20Kb 200 nsec RAM to drive the bit-mapped display, a 2Kb bootstrap PROM and an auxiliary Intel 8035 microprocessor to control the keyboard and floppy disks. The display can be operated as a 1920 (24 lines by 80 characters) character display or as a bit-mapped display (240x640 pixels), where each pixel is controlled by one bit in the 20Kb display RAM. The two integrated 5 1/4 inch floppy disks are double-sided, double-density providing storage of 3600Kb per drive for a total of 720Kb. The n-key rollover Selectric style keyboard contains 49 standard typewriter keys, 9 symbol or control keys, a 14 key numeric/cursor control pad and 15 user programmable function keys.

FOR 1 YEARS WARRANTY ADD 10% HARDWARE COST, MAINTENANCE PRICES PLEASE CALL

MAIL ADDRESS G.W. COMPUTERS LTD. 55 BEDFORD COURT MANS. BEDFORD AVENUE W.C.1. LONDON. TELEX 892031 TWCG BOSTON OFFICE TELEX 94-0890

CONTACT 01-636 8210 OR 01-631 4818 AND IF UNAVAILABLE THEN LEAVE A CALL-BACK MESSAGE (CLEARLY STATING YOUR TELEPHONE NUMBER AND NAME) ON THE 24 HOUR ANSWER PHONE OR SIMPLY LEAVE YOUR ADDRESS AND WE'LL MAIL YOU A STANDARD INFORMATION PACK. WE REGRET WE DO NOT OPERATE A READER'S REPLY CARD SERVICE. TERMS: C.W.O. OR C.O.D. (PRICES EXCLUDE V.A.T.) SOFTWARE SALES ARE 'MAIL ORDER ONLY'. NO DEALERS.

Due to long term contractual commitments, we are only giving restricted demonstrations by appointment at one of our London offices. We export to all countries. Contact Tony Winter on 01-636 8210 or 01-631 4818 and if unavailable then leave a call-back message (clearly stating your telephone number and name) on the 24 hour answer phone, we call back anywhere in the world.

IMPORTANT!!! NO HARDWARE IS ANY VALUE WITHOUT THE SOFTWARE, AND OUR SOFTWARE IS UNEQUALLED. BUY A COMPLETE SYSTEM AND GET 10% OF THE HARDWARE COST IN FREE SOFTWARE.

OUR APPLE PRICES TURN OTHERS GREEN.

C/WP Computer prices are so low, we reckon they're the most competitive you will find for a standard factory-fresh Apple with a full 12-month warranty.

And we're not just clever at keeping prices down: C/WP are experts in CP/M and its software. If you already have a 48K Apple II with two disc drives it could cost you only £125 to make it a CP/M APPLE.

If you are starting from scratch, you can buy a complete CP/M APPLE for under £2,000.

Write or 'phone for our full CP/M hardware and software list.

If you're hungry for an Apple at these prices, contact C/WP Computers on 01-828 3127.

May-June Prentice-Hall computer books event

During May and June new and bestselling computer books published by Prentice-Hall and its associated imprints—Reston, Reward and Spectrum—will be on display in bookshops throughout the country.

Featuring—the book you've been waiting for . . .

BASIC Programming on the BBC Microcomputer

Neil Cryer and Pat Cryer

For beginners with no experience of computers, this comprehensive book has been written with particular reference to the BBC Microcomputer. It provides a step-by-step course on BASIC and teaches you how to write programs using the BBC's enhanced version of BASIC. Every program included has been tested on a production model of the BBC micro.

£5.95 paperback 208 pages 13-066407-3 March 29th

The choice is yours...

Xitan Systems, the South Coast's leading centre for microcomputer hardware and software, offer a choice of over twenty systems from seven major manufacturers.

apple Popular desktop computers for personal and small business use.

comart Communicator range of sophisticated British S100 business systems.

commodore VIC-20, the ideal introduction to computing.

Cromemco Computer range for professional use, with numerous options.

XITAN SYSTEMS

Xitan Systems Limited
23 Cumberland Place
Southampton SO1 2BB
Telephone 0703 38740
Telex 47388 CHACOM G.

NorthStar  The Advantage desktop computer with business graphics.

OSBORNE The briefcase-sized system that took America by storm: a complete business system in a compact, portable package.

SHARP The elegant MZ80B desktop computer, with a range of options.

XITAN The essential back-up for every system, Xitan offer unrivalled knowhow in commercial, industrial, educational and scientific microcomputer applications. Xitan's services include system development, hardware and software support, and fast and effective service in the field.

Make the most of your Sinclair ZX Computer...

Sinclair ZX software on cassette.

£3.⁹⁵ per cassette.

The unprecedented popularity of the ZX Series of Sinclair Personal Computers has generated a large volume of programs written by users.

Sinclair has undertaken to publish the most elegant of these on pre-recorded cassettes. Each program is carefully vetted for interest and quality, and then grouped with other programs to form a single-subject cassette.

Each cassette costs £3.95 (including VAT and p&p) and comes complete with full instructions.

Although primarily designed for the Sinclair ZX81, many of the cassettes are suitable for running on a Sinclair ZX80 – if fitted with a replacement 8K BASIC ROM.

Some of the more elaborate programs can be run only on a Sinclair ZX Personal Computer augmented by a 16K-byte add-on RAM pack.

This RAM pack is described below. And the description of each cassette makes it clear what hardware is required.

16K-BYTE RAM pack

The 16K-byte RAM pack provides 16-times more memory in one complete module. Compatible with the ZX81 and the ZX80, it can be used for program storage or as a database.

The RAM pack simply plugs into the existing expansion port on the rear of a Sinclair ZX Personal Computer.

Cassette 1 – Games

For ZX81 (and ZX80 with 8K BASIC ROM)

ORBIT – your space craft's mission is to pick up a very valuable cargo that's in orbit around a star.

SNIPER – you're surrounded by 40 of the enemy. How quickly can you spot and shoot them when they appear?

METEORS – your starship is cruising through space when you meet a meteor storm. How long can you dodge the deadly danger?

LIFE – J. H. Conway's 'Game of Life' has achieved tremendous popularity in the computing world. Study the life, death and evolution patterns of cells.

WOLFPACK – your naval destroyer is on a submarine hunt. The depth charges are armed, but must be fired with precision.

GOLF – what's your handicap? It's a tricky course but you control the strength of your shots.

Cassette 2 – Junior

For ZX81 with 16K RAM pack

CRASH – simple addition – with the added attraction of a car crash if you get it wrong.

MULTIPLY – long multiplication with five levels of difficulty. If the answer's wrong – the solution is explained.

TRAIN – multiplication tests against the computer. The winner's train reaches the station first.

FRACTIONS – fractions explained at three levels of difficulty. A ten-question test completes the program.

ADDSUB – addition and subtraction with three levels of difficulty. Again, wrong answers are followed by an explanation.

DIVISION – with five levels of difficulty. Mistakes are explained graphically, and a running score is displayed.

SPELLING – up to 500 words over five levels of difficulty. You can even change the words yourself.

Cassette 3 – Business and Household

For ZX81 (and ZX80 with 8K BASIC ROM) with 16K RAM pack

TELEPHONE – set up your own computerised telephone directory and address book. Changes, additions and deletions of up to 50 entries are easy.

NOTE PAD – a powerful, easy-to-run system for storing and retrieving everyday information. Use it as a diary, a catalogue, a reminder system, or a directory.

BANK ACCOUNT – a sophisticated financial recording system with comprehensive documentation. Use it at home to keep track of 'where the money goes,' and at work for expenses, departmental budgets, etc.

Cassette 4 – Games

For ZX81 (and ZX80 with 8K BASIC ROM) and 16K RAM pack

LUNAR LANDING – bring the lunar module down from orbit to a soft landing. You control attitude and orbital direction – but watch the fuel gauge! The screen displays your flight status – digitally and graphically.

TWENTYONE – a dice version of Blackjack.

COMBAT – you're on a suicide space mission. You have only 12

missiles but the aliens have unlimited strength. Can you take 12 of them with you?

SUBSTRIKE – on patrol, your frigate detects a pack of 10 enemy subs. Can you depth-charge them before they torpedoed you?

CODEBREAKER – the computer thinks of a 4-digit number which you have to guess in up to 10 tries. The logical approach is best!

MAYDAY – in answer to a distress call, you've narrowed down the search area to 343 cubic kilometers of deep space. Can you find the astronaut before his life-support system fails in 10 hours time?

Cassette 5 – Junior Education: 9-11-year-olds

For ZX81 (and ZX80 with 8K BASIC ROM)

MATHS – tests arithmetic with three levels of difficulty, and gives your score out of 10.

BALANCE – tests understanding of levers/fulcrum theory with a series of graphic examples.

VOLUMES – 'yes' or 'no' answers from the computer to a series of cube volume calculations.

AVERAGES – what's the average height of your class? The average shoe size of your family? The average pocket money of your friends? The computer plots a bar chart, and distinguishes MEAN from MEDIAN.

BASES – convert from decimal (base 10) to other bases of your choice in the range 2 to 9.

TEMP – Volumes, temperatures – and their combinations.

Cassette 6 – Family Quiz

For ZX81 (and ZX80 with 8K BASIC ROM) with 16K RAM pack.

Four different quizzes, each consisting of 10 questions suitable for the whole family. There's a target time for each quiz, and at the end you're told how long you took to answer the questions – and how many you got right. The quizzes cover a range of topics – including maths, English grammar, and general knowledge.

How to order

Simply use the order form below, and either enclose a cheque or give us the number of your Access, Barclaycard or Trustcard account. Please allow 28 days for delivery. 14-day money-back option.

SHARP 1500 COMPUTER SYSTEM FULL REVIEW IN THIS ISSUE!

Up to **11.5K user memory** (3.5K PC-1500 + 4K CE-151/8K CE-155)
maintained during power-off and battery change
16K Extended BASIC language for powerful programming (**PLUS CE-150**
8K Graphics BASIC)
Four Colour high resolution (500 x 200) printer/plotter with 9 type sizes and
4 print directions (CE-150)

Sales Chart (printout)

Equational Graph (printout)

TWO cassette control for bulk data & program storage with remote control (CE-150)

Full range of science and math functions (statistics with MICROL software)
Up to **thirty-six separate programs** immediately accessible

Twenty-six character LCD display doubles as **1092 point mini-graphic display** with BASIC program control

January Sales Attained (display)

256 frequency tone generator with BASIC repetition, frequency and duration control

Built-in month, date, hours, minutes and seconds **clock**, usable in BASIC programs

One and **two** dimensional arrays (numeric and text)

Full range of text manipulation functions (LEFT, RIGHT, LEN, VAL, MID, CHR, ASC etc)

Ergonomic QWERTY typewriter-style keyboard with separate numeric keypad 'Advanced' programming capabilities with **PEEK, POKE, CALL** etc

Sixty-way system expansion socket for optional add-ons (see below)

Three-way power option (with CE-150) — standard HP7 batteries for PC1500/EA-150 mains adaptor, CE-150 contains rechargeable batteries and is supplied with EZ-150 adaptor

350+ page User Manuals

Optional add-ons include: CE-150 printer/plotter/cassette adaptor, CE-151 4K memory module, CE-155 8K memory module, CE-153 140-key custom keyboard (Summer 82), RS232C communications interface (Autumn 82), custom cassette recorder (Autumn 82), custom system carry-case (Autumn 82). **Further system add-ons will be available first from TEMPUS.**

DIMENSIONS

PC-1500: 195Wx25.5Hx86Dmm (7.11/16x3.3/8") Wt 375g (0.83lb)

CE-150: 330Wx50Hx115Dmm (13x2x4inches) Wt 900g (1.98lb).

Full 12 MONTHS guarantee, with EQUIPMENT LOAN SERVICE during downtime.

***SAME DAY DESPATCH** of orders — Systems by **SECURICOR 24** hour service, (to attended premises only) or by first class registered post. **AT NO EXTRA COST.**

MICROL 1500 Software Series THE PORTABLE COMPUTER COMES OF AGE

Powerful, ready-to-run applications software on cassette, for business, science, engineering and the professions.

All 1500 Software Series programs feature:

- * 100% reliable performance for total dependability
- * User-friendly operating style
- * Comprehensive reference manuals, user tutorials and quick-check reference cards
- * Designed to the highest standards in conjunction with qualified consultants.

MICROL 1500 Software Series products available now and under development include:

1500 PROCOS — the most powerful, practical, yet easy-to-learn software package ever developed for a portable computer.

Using PROCOS, you will be able to create **powerful, reliable** programs in just minutes — even if you have never programmed a computer before.

Designed for all applications involving calculations, **PROCOS cuts program development time by as much as 80-90%**, whilst offering user features normally only found on 'Visicalc'-type systems, helping you answer 'what if' questions and analyse trends.

Fully menu-driven for easy operation, with over forty touch commands for **complete, flexible data management**. The detailed tutorial manual includes examples illustrating how **PROCOS can be used to create a powerful financial accounting package, a business management aid, and general purpose 'super-calculator'**, but the full range of applications is as wide as your imagination.

PROCOS is an **expandable** professional computing system.

The first expansion modules (available June) include:

GRAPHIX adds the easy-read clarity of graphic presentation to PROCOS. Data may be presented as displayed barcharts, printed pie and bar charts, with Autocolour options and 'note-printing' feature.

STATIX brings the benefits of statistical analysis to PROCOS. Designed for the non-technical user, STATIX helps you determine trends and predict future developments.

MICROL 1500 Software Series products require the following hardware:

PC-1500, CE-150 and compatible standard cassette recorder, CE-151/CE-155 memory modules (CE-155 recommended)

1500 PROCOS	£49.95	inc VAT & UK delivery
1500 GRAPHIX	£19.95	
1500 STATIX	£19.95	

To: **Tempus**, FREEPOST, 38 Burleigh St, Cambridge CB1 1BR.

WE PUT CP/M TO WORK ON SHARP

Micro Technology, the people who put CP/M on the Sharp MZ-80B, and on the all-new MZ-80A, have achieved the near impossible and produced CP/M on the PC 3201; plug our board into the back of your PC 3201 and you can run standard 64k CP/M and use the vast library of CP/M software that Micro Technology can supply.

Now look at Sharp equipment, with all machines offering CP/M and integration using CP/NET and MP/M, you can network together the economy of the MZ-80A, the speed and graphics capability of the MZ-80B and the superbly attractive business presentation of the PC 3201.

**SHARP
MZ80B** Highly flexible micro computer with 64k RAM, disks or tape; high resolution graphics and CP/M.

**SHARP
PC3201** And newly available from Micro Technology, a plug-in board that allows you to run your PC 3201 with standard 64k CP/M. All CP/M products on our list are now available, including the superb new Padmede/Micro Technology business packages, all making the PC 3201 an excellent business machine.

**SHARP
MZ80A** The newest Sharp machine, bristling with features, equally at home in a domestic or a business environment. Now with CP/M.

If you're interested in the hardware as well – then please call us.

Just check through our list of software

WORDSTAR Powerful word-processing package, made easy to use by full function key support on the MZ-80B. **£242**

MAILMERGE Add on to WORDSTAR, provides mail-shot and text inclusion. **£73**

SPELLSTAR Add on to WORDSTAR, for spelling checking. **£121**

DATASTAR Screen oriented form definition and data entry tool. **£171**

SUPERSORT I Powerful disk based sort package. Stand alone program and MICROSOFT compatible CALLING SEQUENCE RELOCATABLE ROUTINES. **£122**

SUPERSORT II As SUPERSORT I, but only the stand alone program. **£97**

WORDMASTER Superb screen based text editor, all functions driven by MZ-80B function keys. **£73**

CALCSTAR The new financial planning package from the MICROPRO stable. **£144**

EASYFILER Flexible data definition, data entry, data update and report generator. **£150**

GENISYS General insurance system for office admin and accounting of general insurance broker. **£1000**

EMIS Estate agent management information system. Designed by estate agents for estate agents. **£795**

COMAL-80 The revolutionary structured programming languages, easy to use as BASIC. Recommended for education and teaching environment. **£130**

BASIC-80 Accepted standard Microprocessor based BASIC interpreter. **£209**

BASIC COMPILER BASIC-80 compatible compiler, makes BASIC programs run many times faster. **£236**

FORTTRAN-80 ANSI standard FORTRAN, except for COMPLEX numbers. **£298**

COBOL-80 1974 ANSI standard COBOL, with large program chaining and screen DISPLAY/ACCEPT. **£448**

M/SORT Powerful sorting facility for use primarily with COBOL-80. **£75**

Mu-MATH & MuSIMP Symbolic math package, allows computation on to 611 arithmetic digits. Superb for scientific and engineering applications. **£149**

Mu-LISP & Mu-STAR Extended LISP 1.5. Includes screen based LISP environment editor. **£119**

EDIT-80 & FILCOM Line oriented random access text editor. Includes source and binary file compare program. **£71**

MACRO-80 Assembler with Z80 mnemonics. Includes linking loader, library manager and cross referencer. **£119**

CIS COBOL ANSI 74 standard COBOL to full level 1 standard. **£425**

FORMS-2 For use with CIS COBOL, provides superb screen handling capability for CIS COBOL programs. **£100**

PROSPERO PRO PASCAL Fastest Z80 PASCAL we know. **£190**

PL/1-80 ANSI standard subset G based PL/1 producing direct object code for fast execution. **£298**

BT-80 Record retrieval system or use with PL/1-80, to give data base management facilities. **£119**

MAC Upward compatible assembler from ASM, provides MACROs and Z80 assembly support. **£53**

ZSID Super symbolic debugger, with full Z80 mnemonic support. Works well with MACRO-80. **£59**

TEX Text for matter ideal for producing manuals and similar documents. Note this is not screen based. **£59**

DESPOOL Allows listing of files at same time as other processing. **£29**

CBASIC Commercial BASIC, used extensively for business packages. **£65**

CB80 Full compiler for CBASIC. **£298**

MINI MODEL Very powerful professional financial modelling package. **£399**

MAGSAM Indexed sequential access routines, for use with CBASIC. **£110**

BASKAM Basic keyed access routines for use with BASIC-80. **£95**

DATAFLOW Easy use data file entry tool. For reports, labels or MICROPRO MAILMERGE compatible files. **£99**

PADMEDE/MICRO TECHNOLOGY A full range of business software converted by us from the highly reliable PADMEDE originals to run under CP/M. **£249**

SALES LEDGER SYSTEM Fully integrated, secure, parameterisable with full report facilities. **£249**

PURCHASE LEDGER SYSTEM All the same flexibility as the sales ledger system. **£249**

SALES INVOICING SYSTEM Automatic product description access, audit trail, instantly updatable product file (even while creating an invoice). Integrates with sales ledger system if required. **£249**

NOMINAL LEDGER SYSTEM Integrates all the sales and purchase side of your business. Trial balances can be produced for incomplete records accounting. **£249**

STOCK CONTROL SYSTEM Full stock control system with minimum stock levels and re-order levels. Integration to sales invoicing system provided. **£249**

MICRO TECHNOLOGY MICROTTEXT Easy to learn and easy to use text processor with far more friendly user interface than WORDSTAR. If you wish to use it, then far more power is available to you, including calculator, column and row totalling and macro-text functions. **£270**

MICROMERGE Integrate and merge facility for use with MICROTTEXT. Use for mailshots and simple database retrieval and reporting. **£70**

EXPAND Library routines for use with MICROSOFT calling sequence products. Gives MZ-80B graphics, cassette and music handling. **£65**

Free with any MICROSOFT product purchased at the same time from us.

Please state for which machine /version of CP/M the product is intended.

CASH WITH ORDER for goods by return. Post & packing at £2 per item + VAT @£15%. All orders sent 1st class post.

NOW WE HAVE ADDED 6 TO 24 Mb WINCHESTER DISKS, MP/M AND NETWORKING ON SHARP AS WELL!

6 Mb Winchester hard disk – £1930
12 Mb Winchester hard disk – £2475
18 Mb Winchester hard disk – £3020
24 Mb Winchester hard disk – £3565
* Integral floppy back-up unit – £400
* Clock option
(improves MP/M performance) – £25
RS232C card for MZ-80A or MZ-80B
fully program controlled up to 19,200
baud, dual RS232 or EIA – £150

* Must be ordered with disk unit.

Totally flexible networks of any mix of up to 4 MZ-80As, MZ-80Bs and PC 3201s on an active network, communicating at speeds of up to 19,200 baud or miles apart.

MP/M – £350 CP/NET – £250

Dealer enquiries welcomed.

CP/M, MP/M & CP/NET are trade marks of Digital Research.

HARDWARE GUARANTEE

All advertised products are guaranteed one year from date of purchase against defects in materials and workmanship.

During the guarantee period, Metrotech will repair or replace, at no extra charge, components that prove defective - providing that the product is returned, shipping or postage prepaid, stating when bought and enclosing proof of purchase.

This guarantee does not apply if, in the opinion of the Company, the product has been damaged by accident, misuse or misapplication.

CONDITIONS OF BUSINESS.

We accept cheques or Access, Barclaycard, American Express and Diners Club Cards. All prices, specifications and terms are subject to change without notice at the discretion of the management. All offers subject to availability.

Prices correct at time of going to press. E. & O.E.

Hardware Post and packaging subject to confirmation.

New CP/M software at hard to beat prices

NEW WORDSTAR 3

WORDSTAR™ Version 3.xx has now been released. New features include: column move capabilities, horizontal scrolling – up to 240 columns and even clearer menus. Also released is MicroPro's own spelling checker – SPELLSTAR.

WORD-STAR 3.xx £195/£30
MAILMERGE 3.xx (optional) £55/£10
SPELLSTAR (optional) £105/£10

IN ADDITION METROTECH SUPPLIES A TRUE ENGLISH DICTIONARY, REPLACING U.S. WORDS WITH ENGLISH.

NEW * RECORDS MANAGEMENT

Ideal for office records including personnel, stock, clients and accounts. Features include:

- Comprehensive calculation
- Record selection on updates and reports
- Full sorting facilities
- WORDSTAR INTERFACE – for selective mailing.

COMPSOFT DMS £345/£25

NEW * MICROPLAN

If you have any problem that you would normally solve with a pen, paper and a calculator, then MicroPlan will help you. MicroPlan will perform most types of calculations working on rows and columns, as well as advanced financial analysis.

MICROPLAN £245/£20

NEW CALCSTAR

CalcStar is MicroPro's new electronic Spread sheet and financial modelling Program – a sophisticated, yet easy to use calculating and planning tool. CalcStar also links with WordStar, so you can easily include your final calculations within your report.

CALCSTAR £120/£30

POINTS TO REMEMBER

- All software is Ex-Stock except MDDBS and available on standard 8" disks or 5" disks for Vector MZ, Superbrain, Dynabyte and NEC PC 8000.
- Prices shown as Software with manual/Manual only.
- tml WORD-STAR is a trademark of Micropro.
- METROTECH are sole U.K. distributors for DYNABYTE micro-computer systems.

Software and Hardware at Super Discount Prices

* TOPTEN *

1. **SPACE DEFENCE** — (see below for details) £12
2. **FROGGER** — Try to cross the motorway without getting run over! £10
3. **SKI-RUN** — Super exciting game (see below for details) £5
4. **DUNE BUGGY** — How far can you travel in three minutes? With acceleration and control keys. Drive and buggy across the shores avoiding many hazards. Has 9 skill levels. £5
5. **CAR RACE** — Again an up-to-date arcade favourite. Drive around a figure of eight dodging the other lunatic drivers and hazards. Beware of head-on and cross-over collisions. Not for 'L' drivers or the faint-hearted. £10
6. **SUPER WORM** — An enhanced version of THE WORM with many options including disjointed and invisible tails. £5
7. **CHARSET-20** — Design your own graphic characters to use in your own programs. Contains full instructions for implementing a character set in RAM. £5
8. **CODE BREAKER** — A variation of the old favourite. Break the code of colours in as few moves as possible. Beats all other versions with colour and sound effects. £5
9. **COSMIC BATTLE** — Pilot a space ship through the Cosmos destroying enemy fighters with lasers and photons torpedoes whilst fending off their counter attacks with your shields. £5
10. **JUNGLE** — Hack your way through a jungle but beware Lions and Snakes are out to get you. Lure them into marshes and pits. 9 skill levels. £5

All these top selling games are run on Basic Machine and all prices are inclusive of VAT.

NEW VIC STOP PRESS SUPERMARKET

We have opened our VIC-SUPERMARKET in our spacious showrooms above our established CREAM COMPUTER SHOP in Central Harrow.

The Centre has 12 plus VIC's permanently on display with all the latest hardware and software from RABBIT and other VIC suppliers for you to peruse and choose at your leisure.

Trained staff will be able to offer you advice on software, hardware and all accessories.

TURBO-TAPE

(PET-RABBIT VICchip No.1)

£29

Turbocharge your cassette deck, well almost! If your budget will not run to a Floppy-disk unit just yet, why not buy the next best thing. Dramatically reduces loading and saving on cassette by 5 to 6 times. The programme was originally written for a client who wished to protect original programmes, an additional benefit. Can be turned off and on to load standard C.B.M. format tapes as normal.

Other powerful Toolkit commands and extra programming aid features incorporated together with easy function key control.

new

SKI-RUN

Our superselling game. This fast exciting game, has skill levels 1-9 with fantastic colour and sound and three super games incorporated into it, Slalom Downhill and Giant Slalom. Become an expert ski-ing down the dangerous slopes.

FROGGER

Variation of a famous pub game, Try to cross the motorway without getting run over. Full colour, Hi-Res, optional joy stick control.

£10

SPACE DEFENCE

Yes its here, our version of the all time popular exciting and fast arcade game. You have to be fast, accurate and alert to defend your men on the moons surface against alien craft. But watch out for the mutants and baiters who are always after you.

Memotech's New Memory System for the ZX81

It grows as you progress

Memopak 16K Memory Extension

- £39.95 incl.VAT

It is a fact that the ZX81 has revolutionised home computing, and coupled with the new Memopak 16K it gives you a massive 16K of Directly Addressable RAM, which is neither switched nor paged. With the addition of the Memopak 16K your ZX81's enlarged memory capacity will enable it to execute longer and more sophisticated programs, and to hold an extended database.

The 16K and 64K Memopaks come in attractive, custom-designed and engineered cases which fit snugly on to the back of the ZX81, giving firm, wobble-free connections. See below for ordering information.

Coming Soon...

A complete range of ZX81 plug-in peripherals
Memotech Hi-Res Graphics
Centronics Interface and Software Drivers
Memotech Digitising Tablet RS232 Interface

All these products are designed to fit 'piggy-back' fashion on to each other, and use the Sinclair power supply. WATCH THIS SPACE for further details. We regret we are as yet unable to accept orders or enquiries concerning these products – but we'll let you know as soon as they become available.

How to order your Memopak.

By Post: Fill in the coupon below and enclose your cheque/P.O./Access or Barclaycard number.
By Phone: Access/Barclaycard holders please ring Oxford (0865) 722102 (24-hour answering service).

Please make cheques payable to Memotech Limited
Please debit my Access/Barclaycard* account number

*Please delete whichever does not apply.

SIGNATURE _____ DATE _____

NAME _____ ADDRESS _____

Memopak 64K Memory Extension

-£79.00 incl.VAT

The 64K Memopak is a pack which extends the memory of the ZX81 by a further 56K, and together with the ZX81 gives a full 64K, which is neither switched nor paged, and is directly addressable. The unit is user transparent and accepts basic commands such as 10 DIM A(9000).

BREAKDOWN OF MEMORY AREAS

0–8K ... Sinclair ROM

8–16K ... This section of memory switches in or out in 4K blocks to leave space for memory mapping, holds its contents during cassette loads, allows communication between programmes, and can be used to run assembly language routines.

16–32K ... This area can be used for basic programmes and assembly language routines.

32–64K ... 32K of RAM memory for basic variables and large arrays.

With the Memopak 64K extension the ZX81 is transformed into a powerful computer, suitable for business, leisure and educational use, at a fraction of the cost of comparable systems.

Unique 3 month trade-in offer!

When your programming needs have outgrown the capacity provided by 16K RAM, and you find it necessary to further extend your ZX81's capacity, we will take back your 16K Memopak and allow a discount of £15.00 against your purchase of our 64K model.*

*We reserve the right to reject, for discounting purposes, units which have been either opened or damaged in any way.

the filing, typing and

Silicon Office is the latest microcomputer software program from the Bristol Software Factory.

Designed specifically for use with the Commodore PET 8096, it'll help you run your office with the minimum amount of effort and maximum efficiency.

Think of it like three normal software packages in one, each separate package totally interactive with the other.

For around £4,500, you can have the complete electronic office, the solution to practically all your business problems. The price includes Commodore hardware, a high quality daisy wheel printer and Silicon Office software.

Silicon Office is made up from a flexible information management system which lets you create and maintain an extensive filing arrangement. Allowing you to search quickly through your records, making cross references between files in order to gain the facts you require. A highly sophisticated word processing program allows you to generate letters, documents and reports. Letting secretaries get on with the more important tasks. And a fully comprehensive calculator means you can handle all the number crunching you're ever likely to do in a business situation.

Leaving the accounts department to concentrate on more profitable things.

But that's not all by any means.

Silicon Office also has a special programmability feature which means you or your dealer can expand and tailor the Silicon Office program to your business.

When Silicon Office is used in an everyday business situation, certain command sequences are inevitably repeated. By writing short, very simple programs which are entered into the computer's memory, Silicon Office can perform the necessary tasks, automatically.

And last, but by no means least is an optional communications facility.

It doesn't take much imagination to see the potential of Silicon Office in virtually any line of business.

So to get a better grasp, send away for our brochure. It'll only cost you a stamp. And it could save you a fortune. Or talk to your local Commodore dealer who has all the facts at his fingertips.

You'll soon see how you're much better off with Silicon Office. Than without.

 **commodore**

Prestel spreads its wings

The time has come to choose a good Prestel computer, or to suffer that 'left out' feeling. In a nutshell, things are starting to happen on Prestel — and the only way to find out what they are is to be plugged in.

A Prestel computer nowadays is one that can connect you to other people with Prestel computers — one of the things that it most conspicuously could not do, originally. More: these days it is getting cheaper to use a Prestel machine for sending messages like this, because the Prestel authorities have reduced the price of doing so.

And, on top of that, there are more and more machines around that can be connected to the Prestel network. Not just expensive TV sets with a funny little pocket calculator but real computer terminals, for rather less money.

Latest of the new machines is one from Tandata Marketing, using the most popular 'Viewdata adaptor' — a device

for turning an ordinary TV set into a Prestel terminal — the AlphaTantel. This new machine comes in a briefcase, at just over £500 including VAT.

The unusual thing about the briefcase Viewdata machine is that it doesn't plug into the telephone socket. Normal Prestel receivers do, but the fact of the matter is that most telephones still don't have sockets, and so normal Prestel receivers can't be plugged into any phone. Briefcase Viewdata can, because it can make the necessary Prestel tones audibly and sing them into an ordinary telephone receiver — and can pick up the sound of the returning notes.

'Prestel or private Viewdata users can therefore make use of the system wherever they can find an ordinary telephone and television — for example, in a hotel room,' notes Tandata.

The acoustic coupler is

Independent Computer Engineering can supply this Scottish-built hard disk system for Apple, Superbrain or any S100 bus micro. It provides up to 10 megabytes of storage, and has the advantage of being locally repairable, they say. They don't say it has the advantage of being cheap, however. Details on Ashford (07842) 47271.

built into the system. The machine otherwise has all the features of the AlphaTantel — it can be connected to a printer with the cheap Centronics interface, and it can store pages on a tape recorder.

To use the 'mailbox' facility on Prestel, you have to belong to a sort of club called a 'closed user group', with your own licensed storage inside the Prestel computer. Until recently, this was a bit of a joke: the cost of belonging was high and the number of closed user groups was restricted to 50 in the UK.

Prestel authorities have now stopped discouraging customers. The cost of setting up a private Prestel group used to be £2500 — it is now a tenth of that at £250. And Prestel can accept 32,000 groups instead of only 50.

Even more significantly, anybody with their own database of information (or group of connected computers) can link it up to Prestel. That is, anybody within easy reach of Croydon phone exchange.

Prestel has set up a 'Gateway' service to connect outside computers to its own storage and switching machines. Instead of dialling into the normal pages of information, you can dial into the gateway. And if the gateway is a computer with a whole new set of Prestel-type pages, somewhere else in the country, this is very useful — or at least it will be.

At the moment, however, it is only very useful to

'nearly one quarter of Britain's telephone users', as Prestel people refer to the people who can dial 01- numbers as a local call. All the rest have to make a trunk call (or STD call, if you like the acronym better).

One of the things that can now be dialled into is a newspaper about micros. It's called *Viewfax 258*, which has something of the appeal of a pirate radio station about it.

'Unlike other bulletin boards, *Viewfax 258* is available to the majority of UK telephone subscribers at local call rates, 24 hours a day, seven days a week,' announces the company.

'Another advantage of using Prestel is that information is sent at four times the speed of most bulletin board systems; furthermore, every retrieval computer can handle around 200 simultaneous users. There is even a computer in Boston which can be accessed throughout North America via Telenet,' they add.

The reference to speed has to do with the fact that Prestel transmits 120 (or so) characters per second, while most systems only manage 30 (or so).

This brings one naturally to the only real drawback of Prestel: you still can't transmit faster than seven (or so) characters per second. This may be about as fast as you could hope to type, but with a computer you tend to prepare your message first (while

Photography by John Mason

This thrilling example of the photographer's art is the PCW cover that never was. It should have graced this very issue but was displaced by the sudden arrival of Uncle Clive's latest blockbuster, to the eternal chagrin of DP who has fought for years to get a handhold on the cover. Flowers, letters of condolence or small gifts of alcoholic beverages should be sent to the usual editorial address.

the phone isn't working up a big charge) and then transmit it later as fast as possible.

The reason users are stuck with seven (or so) characters per second is not, however, so that you are forced to run up huge charges on your phone if ever you use the service. Naturally, this consideration doesn't actually bother the people at Telephone House, but it isn't why it happens.

No, the reason is that the modem which Prestel sets use was originally designed to receive data fast but to transmit slowly — because it would be cheap (they said at the time). And when they found that it could work fast in both directions, and still be cheap, they refused to allow people to do it. They refused because the service provided that way would be vastly superior to the antiquated, clumsy service provided by Telecom's Datel modems, which can't even tell if the phone line is working or disconnected.

And we can't have technology putting our valuable antiques onto the scrap-heap, can we?

Anyway, the daily micro magazine is subsidised by advertisers who pay £15 for a page on Viewfax, and it sounds interesting. I shall just have to get a Prestel set and try it — use Prestel mailbox 021-704 115 for information. Or call 021-705 0258.

For details of how to set up a closed user group of your own, contact Prestel HQ on 01-583 9811.

ZX chess

Turn your ZX81 into a nice chess-playing computer with excellent graphics, by getting a £45 ZXChess program plus QS Characters board. This offer from Artic Computing comes as a taster before its rather more important, though more esoteric, announcement of Forth for the Sinclair.

Forth is a programming language where you define what you want to do in terms

of instructions which you build up yourself. It may be hell for someone else to find out what you have actually done, but it is very fast as a method of actually doing it in the first place.

Forth from Artic (as in lorry, not as in North Pole) will cost £60 on a ROM. Details from Artic at 396 James Reckitt Avenue, Hull, North Humberside.

Video course

For a fee of £275, you can get into a course on computer-controlled video where you will be able to operate a video disk player by programming an Apple. The course is the first workshop by Roy Goodman's new company, Office Of The Future Ltd. Goodman originally was famous as the founder of Infotech.

The two-day course runs on 18-19 May and 17-18 June, and details are available from 108 Kew Road, Richmond, Surrey TW9 2PD.

Soft rent

On 1 July, the Software Rental Bank will begin a superb notion of renting software to people so that they can see if they like it before buying. If you buy, you get the rent paid deducted from the price.

The idea will terrify many suppliers of software, who are bound to shriek 'but they'll just copy it and keep it'.

It won't happen like that. Most people copy software either because they just can't afford to buy it, or because they don't know whether it's worth buying or not, so they borrow it first from a friend.

This scheme will let people try software out, legitimately. Do you think that The Last One, for instance, is all razzmatazz and nothing more? Find out if WordStar really is too complicated to use. Find out if you prefer Visicalc to the more costly

The closest thing to a real working Ethernet network is the Ungermann-Bass system Net One (available exclusively through Case and exclusively through Thame Systems, and exclusively through British Telecom) which now has this little white box. It is a Network Configuration Facility.

That, my children, is something on which you can develop extra software, using a Whitesmith C Compiler, to improve your network. It has a five-megabyte hard disk, a one-megabyte floppy disk and an intelligent controller with a general purpose bus interface (IEEE 488). Details from Thame on (084 421) 5471.

Micromodeller, or whether you need the extra features. All for the cost of your membership, plus the safeguard of a deposit.

Membership costs £30 for 'associate' status; £70 for 'full' membership, and £500 for 'corporate' membership.

Rental normally costs 20 percent of the list price of a program, down to a minimum of £8.00. Associates get one week's rental and have to pay a deposit of the full value of the program. Full members get two weeks' rental (up to £500 at any one time, they say — so presumably full members can't rent expensive software) while corporate members pay only 10 percent and get up to £1000 worth at any time.

It sounds a bit complex, but apart from that I can't see anything wrong with the scheme. Details from 58 North Street, Leighton Buzzard, Beds LU7 7EN or phone (0908) 53491.

16-bit TABS

Until something new evolves, traditional computerised methods of keeping track of accounts are necessary — and surprisingly few traditional accounting methods have been transferred from old computers to the new micros.

The TABS accounting system has been described as having all the traditional computer accounting virtues, with a few nice trends in working towards tomorrow's systems — and it is possibly this traditional stability that has led Terry Poole to transfer it all to two new machines, the IBM Personal Computer and the similar ACT Sirius 1.

The system 'covers a suite of 14 application program modules, which include sales, purchase and nominal ledgers, stock control, payroll, job

costing, word processing management accounting, and so on,' says TABS, announcing the availability of its software on these two machines.

There isn't a lot else to say: contact TABS on Andover (0264) 58933 for more details.

Would you credit it?

Don't use your Access card to buy a BBC Computer for a friend because Access will bounce the payment. Yes, it will, and it won't warn you either — and goodness only knows what happens to your place in the queue.

It turns out that Access credit card holders can order goods to be delivered only to their home addresses. As soon as you buy something for a friend, of course, Access will write to you and tell you they've bounced it, adding a terse note to the effect that they are 'sorry for the inconvenience'.

Inconvenience! You don't know the half of it, Access. The thing is that the BBC micro is supplied under the most honourable terms, whereby Acorn is not allowed to collect the money until it gets word from its mail order subcontractor that the product is in the warehouse, ready to ship.

The way the deliveries have been going, that can be five or six or more months after you placed the order. Your place in the long queue has finally come up . . . and what do you know? Access has bounced the payment. Access expects you to be grateful, because Access has saved you from being ripped off by somebody who knew your Access number. It's a pity you moved house in the meanwhile . . . At that point,

If you buy a Xerox 820 and you want a five-megabyte hard disk drive, Rair will sell you this one for around £2000, including adaptor and software to operate it. Details on 01-836 6921.

WHEN YOU HAVE 637 PROSPECTS TO REMEMBER YOU NEED OUR ELECTRONIC CARD-INDEXING AND RETRIEVAL SYSTEM

Many people know Henry VIII had six wives. But few are aware of his 637 girlfriends. Poor Henry! Is it any wonder he laid about them with an axe. Just imagine trying to remember all those first names, addresses, birthdays, pigeon hole numbers and personal details.

With CARDBOX, Caxton's new electronic card indexing system, keeping and retrieving information is simplicity itself. Not only could Henry have found his ladies but he could have kept tabs on all those barons, bishops and bowmen. (Rent demands would have gone on time, confiscations would have been orderly and executioners would have been selected to suit every occasion.)

And he wouldn't have had to understand a thing about computers. CARDBOX looks like your favourite card index on the screen. You draw the card yourself. You decide where you want lines. You make up your own headings. And you fill in the details.

At this point CARDBOX stops behaving

like a flat inflexible card. It becomes multi-dimensional electronic paper. You can change any information you want. You can retrieve portions of information. You can print out all or selected information from your cards.

You talk to CARDBOX in plain English. You search your records on key words or on selected criteria. CARDBOX acts like a sieve, sifting through the records reducing the number until it finds only those that meet your needs. You display records on your screen or print them out in a format of your own design. Label production for mailing is simple. You can also use CARDBOX with some of your favourite wordprocessing packages, eg Wordstar.

CARDBOX works on most popular CP/M machines including those with special screens, eg Osborne. Use the CARDBOX Tutorial to learn all about this simple, fast aid to better record management. Study the detailed Reference Manual to take full advantage of its sophisticated features.

See CARDBOX at your local computer dealer. Or we'll send it to you with a dealer list. Call or return the coupon to us.

CP/M, Wordstar and Osborne are registered trademarks of Digital Research, MicroPro and Osborne Computer Corporation respectively.

The really interesting thing about this picture of a Digico Prince micro being delivered to the Liberal Party at the National Liberal Club is the question: what is Lord Avebury doing there?

Lord Avebury used to kiss babies (or whatever you do to become Orpington's MP) under the name of Eric Lubbock, and he remains a prominent Liberal. The Liberal Party is going to use two Digico Prince micros — but Eric isn't in the picture because he represents the Liberal Party. That task falls to the Party's Secretary General, Hugh Jones (in the middle).

Digico's announcement mentions that the Liberals will use the micro for 'general accounting, subscriptions for the party's newspaper Liberal News, and for the large mailing lists of subscribers to fund raising appeals (at present 10,000 names and addresses)'. And it mentions the nice Digico sales director (with the beard), Steve Moyle.

I imagine it doesn't explain what Avebury is doing there, because the publicists at Digico felt that some of the glory of the announcement would be lost if they pointed out that he was also chairman of Digico.

Oh well, heck: at least it provided seven paragraphs of publicity to lead into the announcement that the Prince can now be bought for £6000 with a daisywheel printer and a big five-megabyte hard disk data storage device built in. Details on (04626) 78172.

you have the choice of starting a long explanation to Acorn and its mail-order group, and hoping they have records which show it all — or of going off and buying Uncle Clive's new Spectrum.

Oh, come on. Surely you're not going to quit now? After waiting so long?

Dr Micro

What is wrong with computers in medicine? Apparently quite a lot, and the British Medical Association (BMA) is out to give the computer people a good push in the right direction, by running a seminar on this subject in the beginning of June.

The seminar, 'What's Wrong With Computers In Medicine', will feature one talk on all the shortcomings, in the hope of encouraging

them to be put right. It will be given by Dr John Dawson, the BMA Under-Secretary, 'who will highlight ways of overcoming poor ergonomic design, and encourage doctors and manufacturers to understand how currently inadequate systems could be improved to exploit fully the potential of available computers.'

It looks like a high-power seminar, opened by that ubiquitous MP and Minister. Kenneth Baker (Information Technology chief in the Cabinet) and with a second minister, Kenneth Clark of the Health Department, speaking on the second day. The BMA is organising it jointly with the Institution of Electrical Engineers.

If you feel you need more guarantees of its likely importance, then I can tell you that other speakers in-

clude somebody specialising in aids for the disabled, somebody from the Health Department in charge of information handling, somebody from the Royal Free Hospital (Professor Neil McIntyre), and somebody from the Royal College of Surgeons (Professor James Payne).

The only snag: IBM is giving a presentation on its 'Patient Care System'. I'm sure that will be inspiring, but what about micros? A bit beneath our august medical dignity, are they? Not a mention of them in the whole announcement.

I expect if we ignore them, they might still go away.

Details from the BMA at Tavistock Square, London WC1, phone 01-387 4499.

Atom add

There are so many ways of improving the Acorn Atom, mostly by plugging in a ROM chip, that users normally have a terrible time deciding which chip to buy. You can't normally plug them all in.

Aha, you say — 'normally'. That means that something new has arrived doesn't it?

Yes, indeed: a Four Outlet ROM adaptor. You get it from CMT Computer Technology of 6 Turf Park Road, Royton, Oldham, Lancs OL2 6EP, for a mere £22. You can then plug in four different ROM chips — for example, a Word Pack text editor, a Prog Power Tool Box, an Acorn Data Base, and a fast cassette controller from CMT. The only snag is that you have to use a Poke command (a '?' in Atom Basic) to select which ROM you use.

Phones 'freed'

I foresee tears as a result of the Department of Industry's attempt to 'liberalise' the Telecom authority.

The idea is that you and I, should we be brave enough, can now compete with Telecom even if we use its own copper wire, by doing extra

clever things to any messages that get transmitted. For example, you can store messages and forward them later when the recipient is there. Or you can change the protocols, so that a message from an IBM computer will make sense to an ICL or Apple computer.

The trouble is that it isn't clear (to me) that you can provide a protocol conversion service. Inevitably, some of your users are going to have the same protocol (they may not know it) and your service is going to output exactly the same thing as it received.

But, according to the Department of Industry, these 'value added' services must first 'process in such a way that when delivered, the messages have been clearly altered as to format, protocol or content'.

And, of course, Telecom would never oppose a licence on such obviously *bona fide* grounds, because Telecom welcomes competition. Doesn't it? And anyway, the message will have been stored and forwarded.

Fortunately, there is an Advisory Panel which can be appealed to if you disagree. It can 'recommend action' to the Secretary of State.

But I still think it'll end in tears.

Run with Clive

Here's your own chance to beat Sinclair on Sunday 18 July. After all the excitement of Clive Sinclair's new machine, get ready for his new marathon. Or, more precisely, his new half-marathon.

The half-marathon is costing Sinclair £5000 as part of his sponsorship of the 1982 Cambridge Festival. But he's going a step further than merely sponsoring it — he's running in it, too.

The race starts near his Kings Parade offices, 'includes a riverside stretch along Chesterton Lane, the "Backs", and finishes in the Market

Costing around £200, this is a Centronics-interface version of the Star printer supplied by Stottron of Hastings. Details on (0424) 442160.

NEWSPRINT

Square at the Guildhall Steps', says the announcement. That's very near rival Acorn Computer's original office and where Acornsoft is now based.

Details from the organiser, Brian Allinson of the Amenities and Recreation Department, Cambridge City Council, which is at Kett House, Station Road, Cambridge CB1 2JX.

Moving in...

People describe Japanese machines in Japan as very cheap but lacking software. Over here, they still aren't even cheap — but with Mitsubishi's latest idea, maybe they are starting to get some software, because the thing comes complete with a robot.

The robot is the 'Move Master', a robot arm which can move all over the place, under control of a CP/M microcomputer.

Apart from having the CP/M software, the micro also has to have something called a 'semiCentronics interface' which is a little less than the normal parallel wires that control Centronics-type printers but can be connected to a normal Centronics 'outlet' on a micro. So, to make the robot work you need the half-Centronics software to send the right signals down the right half of the wires.

Cost of Move Master and control processor is \$5000. Mitsubishi hopes the thing will be used 'for training operators, as a teaching aid, or as a point of sale display' (a shop window gimmick, I suppose).

With a little luck, it will also prod lethargic UK micro builders into realising what they will be up against in a year or so, when Japanese machines do start spilling over into the West. But I doubt it: they will carry on making 'hand-crafted quality machines' which will go the way of the Norton motorbike and the Dodo.

Details of Move Master from the company's Tokyo offices at 2-3, Marunouchi

2-chome Chiyoda-ku, Tokyo 100, Japan — or wake up in the night and phone (218) 2173.

Auto office

An office automation conference, backed by the Institute of Directors and supposed to be 'part of Information Technology Year', is running from 15-17 June at the Barbican Centre in London. It is organised by the organisers of the *Which Computer?* Show, Clapp and Poliak Europe. That's all the details I have at press time; further information on 01-747 3131.

PET show

The PET Show, still a bit bigger and more important than any other specialist micro show in Britain, runs from 3 to 5 June at the Cunard Hotel, Hammersmith. Over 100 exhibitors will be there, and while the hardware will be mainly the same from one stand to another, there will be lots of different (and competing) add-ons, software, and other ideas to compare.

If for nothing else, get there to see Jim Butterfield, the world's greatest PET expert. I think he actually knows more about the PET than there is to know. And he will be meeting the worried, curious or otherwise fascinated, courtesy of Commodore. Details on Slough 79292

Apple Logo

Just because a language is easy to learn doesn't make it easy to write programs in that language — as a great many Basic programmers are starting to find out. Which accounts for the number of people who are getting enthusiastic about Logo, a teaching language which actually encourages people to write good programs, and to learn good programming habits.

Latest to get enthusiastic about Logo is Apple itself, which has announced an official Apple Logo. Hope-

EPISODE

The NEW compact 1.5MB
Standalone Computer

£1995 + VAT

EPISODE – A high performance standalone computer at a down to earth price. Capable of sharing data bases.

■ **FLEXIBLE – COMPACT – ADAPTABLE.** The Episode allows user choice of VDU's and printers, takes up the desk space of a legal document and under its CP/M operating system ensures availability of technical and business software for both technical and non-technical user.

■ **Word processing/mailling ■ Financial planning**
■ **Integrated accounts ■ Stock control**
■ **Payroll ■ Information management**

■ A wide range of languages and utilities is available under CP/M to the technical user. BASIC, FORTRAN, COBOL, PASCAL, etc.

■ Can be used with existing mainframe terminals.

Standard features

Z80A Processor, 64K RAM, Diagnostic PROM, Dual 5" double sided double tracked drives (1.5 MB total), Dual RS232c ports, Centronics parallel port, battery calendar clock.

NEWSPRINT

fully it is a good version because there are so many different people around, all offering their own versions, that it is going to be very difficult to know which one to recommend – but the Apple version is almost certain to become the standard. Just because Apple is behind it, probably.

Available from Apple dealers.

Single-handed WP

Our lovable Editor has a thing about a one-handed typing device called a Microwriter, which requires you to press five keys in many different combinations to create the whole printable typewriter character set.

He has learned to type with one hand and therefore wishes everyone to know that you've just missed the chance to see the thing at the Word Processing exhibition on 25-28 May. Oh, maybe you've just got time to see it if you run or the issue got printed early. It's at the Wembley Conference Centre in London.

The company was also planning to launch a new product just before the show but didn't tell us what it was (please see 'The Line Is Dead') in time for this report.

68k chips

Motorola's partner in the development of its giant 16-bit processor, the 68000, is semiconductor firm Mostek – which has now announced a few enormous chips of its own to add to the 68000's potential.

The company has published

details of four new chips in the 68000 family, including a 'single-chip computer' with a few extra functions included that would normally require extra chips and complicated interfaces to the central processor.

It isn't meant for computing work but for using as a controller chip inside some automatic machine. That chip won't be available for at least a year, however.

More significantly for us computing types, there is a serial input and output controller, which will make it simple to take the 16-bit parallel codes inside the central processor and queue them up into a serial stream of pulses for transmitting or receiving – in quite complex manners such as ordinary asynchronous communications; or IBM's favourite bisynch (binary synchronous) and even including IBM's complete SDLC (synchronous data link control) protocol. That is all on a chip due to be tried out by the end of this year, and possibly available to builders within 12 months.

There is also a multi-function peripheral chip, to provide 'the three most popular peripheral functions, of serial input and output, timers, and parallel input and output, into one device,' says Mostek. By input and output, Mostek doesn't just mean a string of serial information but complex tasks such as feeding data streams directly into specified parts of the computer's memory without having to interrupt the processor – direct memory access or DMA. That chip too will appear towards the end of this year and will be available in around 12 months in high volume (perhaps).

Finally, Mostek has decided to follow Intel, Digital

The little white box inset, looking like a one-ring electric cooker on its side, is actually a power supply and fan which can reduce the temperature inside your Apple from 47 deg C to 23 deg C, and can also power the machine, a printer (or hard disk) and the fan, while cutting out several of the electrical interruptions that can come down the mains and screw up your Apple. It costs £150 including VAT, and details are available from Avitek near Reading, on (049 162) 765.

NEWSPRINT

Should you ever notice that your office is always cold for the first five minutes or so that you are in it, look round for one of these little blind TV sets — because what it actually is, is a Sensatemp, which can tell if there's somebody in the room. If there isn't, it can tell the central computer which controls the building's heating and lighting, to save the electricity for the heating (or air conditioning) and lighting in that room. It costs £97. Details from Alternative Marketing Services in Sharpthorne, West Sussex, on (0342) 810771.

Equipment and Xerox by adopting the Ethernet idea for local networks of processors and other equipment.

By putting the whole electronics of Ethernet on one chip, the company will make it possible to have lots of 68000 processors all sharing printers, disks and other expensive items for only a couple of hundred pounds, rather than a few thousand extra. But this chip is really only in the early stages of a long design process: don't expect to see even one sample much before the end of 1983, says Mostek. It's a very big chip.

In the meantime, don't believe anybody who says he has a cheap Ethernet system. Details of the Mostek chip on 01-204 9322.

The line is dead

Deadlines are strange things. A deadline can be 'put back' sometimes, if it has first been 'put forward' to make this possible. A deadline can be 'stretched' if it is broad enough, by taking the four things that have to be done in a different order. A deadline can be rescheduled, sometimes, if you can see the new schedule coming.

The One Thing a Deadline Cannot Do is be revived. Once 'Newsprint' has been written and printed, it is dead and gone. The line is dead; long live next month's deadline.

In this issue are one or two items of some importance,

which actually happened in February. The people who made these things (for example, Prestel's new price for closed user groups) happen kept it all secret until they were ready. Then they sent us an announcement which got here just after we put the May issue to bed — so it got printed in the June issue.

For the sake of professional (!) publicists, let me point out that it takes a long time to prepare and print a paper as big as PCW.

This item, for instance, was written over the Easter weekend, finishing on Monday 12 April. Just because you did something in March and posted the announcement in the first week of April, don't expect to see it here, because it missed the deadline.

If you want to know why it missed the deadline, think of this: in any week, PCW gets between 200 and 300 serious press announcements. Just sorting out this month's 600-plus news possibilities into a rough priority order took me three full days' work.

During those three days, I don't open the post — I don't have time. At the end of those three days, I have to writelike-hell for the rest of the week, including the weekend.

At that stage, anybody who suggested that I start opening the extra 200-odd announcements that have come in since I started work, and sorted them into some priority, and wrote them up, would get his trousers kicked, even by phone if necessary.

If you want to tell me

OSBORNE 1

The portable business computer with a difference

£1250

+ VAT

INCLUDES SOFTWARE VALUE £800 +

Osborne 1 — The personal business computer for small businesses and busy executives on the move.

- Compact and mobile — The Osborne 1 simply packs into its own carrying case. Take it wherever your work takes you.
- Comes complete — Z80A 64K computer, dual 100KB disc drives, typewriter keyboard with numeric keypad and 5" screen.
- Capabilities include word processing, data processing and financial planning.
- CP/M operating system allows user choice from a wide range of existing written programs.
- Connects to a variety of printers.

Included in the amazing price of just £1250 is over £800 worth of FREE software:—

WORDSTAR for word processing.
MAILMERGE for name/address database.
SUPERCALC for financial planning.
MBASIC & CBASIC for programming.

The Printer People

MANNESMANN TALLY

120 & 140

The high speed machine with high quality features, utter reliability and reasonable price — and all the features you ever wanted including:- 80 cols. (120 version) or 132 cols. (140 version), 160 CPS, 10 character sets - 96 characters each, double width characters, four different pitches, (2 colour printing - option)

The small, quiet, robust, business printers, ideally matching today's requirements for —

QUALITY + SPEED + VERSATILITY AND PRICE

QUME

SPRINT 9 & 9/35 KSR

The Daisywheel Printing Terminal series that sets a new standard for print quality, reliability and serviceability. Unbeatable performance at a realistic price.

NEC

SPINWRITER Plus '83

Up to 55 CPS
Impeccable print quality
printers utilising the NEC print "thimble".

OKI

82A 83A

Small, light, quiet, dot matrix printer. 40, 80 or 132 columns, 6 or 8 lines per inch, 96 ASCII characters plus 64 graphics characters, Centronics int.

EPSON

MX80 RANGE

The unbelievable quality printer from the world's largest print head manufacturer. A whole stable of machines to suit a wide variety of applications: MX80, MX82, MX 80FT/1 & MX80 FT/New Type 2. MX100

NEC

8023A

100CPS Dot Matrix Printer —First in a new generation of machines embodying the quality and features you have come to expect from one of the worlds leading manufacturers.

BDT

ASF 160/560

BDT automatic sheet feeders automate the only thing left in word processing that needs automation. No word processing system is truly automatic if an operator is required to hand feed sheets into the printer, or resort to perforated continuous stock. This handling individual sheets can now be a thing of the past.

TEC

STARWRITER

Low cost, reliable, bidirectional daisy wheel printer—professional quality printout with Diablo or Qume print wheels. Suitable for most micros with RS232C or 8 bit parallel.

PRINCE

24MHz

12" Green Screen, the monitor with features normally found on screens costing far more. It has a sensitivity adjustment from 0.5V to 4.0V thus allowing ample drive capabilities even with the most meagre of video signals.

NORTHAMBER LIMITED

I think the Baroness, a well-known publicity consultant, deserves some kind of extra points for this valiant attempt to take a picture of software.

She did it on behalf of Alphatronic: the picture of the blonde lady is one showing a 'very popular German database program, Minigeni, now translated and adapted for this country by Dantedale Ltd'.

The picture of the dark-haired lady shows a telex preparation system (the black box punches telex paper tape), 'which significantly reduces the bottlenecks that occur at a company's telex machine during preparation and editing of telex messages.' Details of these Alphachronic (as it is affectionately known) systems from Triumph Adler, on 01-734 2907.

something, tell me before the deadline dies. Especially courses. This month, I threw away announcements of 17 different training courses, because they happened before PCW could be printed.

What really makes it fun is that, two weeks later, the Editor will get a letter from the outraged course organiser, complaining that 'Guy Kewney never seems interested in our courses.'

Moderate cheers

It is very useful to have computers in schools and providing 100 as prizes should give a lot of people who don't win a powerful incentive to go out and buy one. So two moderate cheers for the Department of Industry, which has awarded the prizes.

Why the restraint (you ask)? Easy: the prizes were Research Machines RML 380Z computers, which no school in my neck of the woods can afford to spread

thickly round the pupils. The machine may be lovely but one computer in a school is about as significant a step towards computer literacy as having a woman Prime Minister is a step to female equality — that is to say, almost irrelevant. And more than one 380Z is on its way to being expensive: a classroom full is out of the question.

All of which is not to say that the prizes are a bad idea — far from it. It's just not too hard to think of a better one, even if it does mean casting some slight doubt on the RML range's status as Official Educational Micro. But then, that might do Research Machines a bit of good in the long run (perhaps).

Blatant plug

An exciting plan to publish a book on computer and video games in time for this Xmas rush has just fallen through.

A pity: not only would the book have been valuable to the market and the readers, but the two authors (a lady called Elsbeth Joiner and myself) would have made some money out of it. But, apparently, the publishers wouldn't have.

Not to worry: we're going ahead anyway. The result of our efforts will be published — somehow — before the program-buying season in November. All we need is information.

Anybody with game products, please make sure I get details in plenty of time — send information to my own office at 38 Digby Crescent, London N4 2HR.

New Commodores

After sitting quietly letting the world speculate and shake its collective head in wonderment, Commodore has suddenly leapt in with a new range of computers, both up- and down-market from its existing machines.

Most spectacular is the 720, a smart new business machine which not only

looks radically different from anything else on the market but has some very exciting features. Like: 256k of RAM (a 128k model is on its way), 20k of ROM, an integral 80 x 25 display, a full qwerty keyboard with 10 programmable function keys, four cursor controls (at last!) and a numeric pad, twin built-in floppy disk drives (also at last), cassette, RS232, IEEE 488 and user ports and — most interesting of all — a slot for a second processor; 8088 and Z80 add-ons are also promised.

Slightly down-range is the 500 series, which looks quite similar except that there's no integral screen or disk drives. The unit plugs into a TV to give a 40 x 25 colour text display or 320 x 200 hi-res colour graphics, there's a music synthesiser with a 9-octave range and three voices, 20k of ROM and 64k RAM (expandable to 256k) and the unit also has a second processor slot.

Both machines come with Basic in ROM and, with the addition of a Z80, both will run CP/M software, with the main processor, a 6509 (a 6502 with memory paging) handling I/O.

Severely disabled people can do amazing things with computers, if they are trained to program them, but severely disabled people often have trouble raising the money needed to get trained.

So lots of marks to Olivetti for donating this P6060 (a sort of costly micro) to Queen Elizabeth's College in Leatherhead, Surrey. Until now, students have had to do their studies without a computer to transfer theory to practice, which is an absolute scandal and every micro supplier who hasn't responded to this sort of problem is not only unaware but thick — because training people on your own machine is very much a two-way benefit. It grows friendly users who are likely to do a lot to enhance the abilities of the machine.

The 5th Personal Computer World Show

By the middle of April we knew that this year's Show would break all records — for number of exhibitors, size of show and attendance. Over 1500 square metres of space are already allocated to the 70-odd companies who have so far returned their contracts. A full list of all the companies that are coming will appear in each issue of *PCW* from now until the preview issue itself comes out in the middle of August. Here's the first list.

If you're looking for business systems the big news is that Digital Equipment (DEC to its friends) has booked a massive 100-square-metre stand. When a big mini manufacturer starts up in the micro market a few sparks should fly. IBM machines will be on show on the Microcomputerland Stand — with a new add-on coming out every twenty minutes for IBM's Personal Computer in the States who knows what will filter through by September? And it's a little more than coincidence that Peachtree (the company IBM picked as official business software suppliers in the US) is also booked into the show. Other news is that the Newbrain (mooted two years ago and now finally being built by Grundy) will be there, as will the entire product range from Sharp, Commodore, Tandy and NEC.

Upstairs in the home and hobbyist section we know that if all goes well the colour Genie will be launched at the Show. Commodore, NEC and Acorn will be in both parts of the show this year, which will mean even more demonstration machines for visitors to get their hands on.

There will also be the usual profusion of add-ons, dongles and gizmos from people like Supersoft, Vero and Audio Computers. It is not beyond the bounds of possibility that this will be the first place to see BBC software in decent quantity and variety — from Acorn/Aunty and from independents like Bugbyte.

Our own features will include the World Microcomputer Chess Championship, Computertown, and almost certainly a chance to challenge micros to a very well known board game.

If you are one of the 14 people who haven't already got the *PCW* Show in their diary you should by now have realised the error of your ways. And, if you need more convincing, over the next couple of issues we will be giving details of cheap travel and hotel deals, reduced entry vouchers and more news about the features.

Time Data

Three new home machines have been announced: the VIC 10, VIC 30 and the long-rumoured Commodore 64.

The two VIC models feature similar basic specs (40 x 25 colour text or 320 x 200 graphics, ROM Basic, and sound), but the Basics differ in that the 10 has a plug-in ROM pack Basic which can be replaced with games or music cartridges while the 30 has an 8k Basic buried in 20k of ROM, which includes the operating system and character generator. They have different RAM sizes, too: 2k for the 10 and 16k for the 30.

The Commodore 64 has the same graphics and sound capabilities of the VICs but has a full 64k of RAM in addition to the 20k Basic and operating system in ROM and also has a second processor slot. In addition, it can be persuaded to run software written for other 40-column Commodore machines.

With the new machines, Commodore now has a very large product range. The 3000 series is dropped but the 4000 and 8000 series remain — for the time being. Although there's no official word from CBM at the moment, it rather looks as though the ageing remnants of the PET line will fade in the near future (ie, as soon as the existing stocks have been sold), to be replaced by the 500 and 700 series.

Prices: VIC 10: £100; VIC 20: £200; VIC 30: £250; 64: £400; 4000 series: £550-£1430; 510: £695; 8000 series: £895-£3500; 710 (like the 720 but without a screen): £995; and 720: £1595. Note that the VIC and 64 prices include VAT — the other prices don't.

Peter Rodwell.

Calling all clubs

Once again free stand space is being made available to computer clubs at this year's *PCW* Show (9-12 September at the Barbican in London).

Any clubs who want to get in on the scene should contact Dr David Annals at 142 Windermere Road, London SW16 5HE immediately!

Three new 16-bitters

Three 16-bit micros were launched in Europe in the last month, one of which looks as though it could ally with the Sirius 1 to give IBM a tough time when the Jolly Giant finally gets round to launching this side of the Atlantic (and the latest estimate for that is a September launch for end-of-year delivery).

Office equipment giant Olivetti finally launched its personal computer, the M20, at a lavish press conference near Turin.

Instead of first testing the water with a conventional 8-bit machine, Olivetti has produced a 16-bit micro with 128k of RAM and its very own operating system. Estimated selling price in the UK is around £2500.

The M20 is virtually unique in the micro world in being based around Zilog's Z8000 processor, a decision made back in the early days of 16-bit chips when the Z8000 was the only real product available and looked all set to win the race.

As well as the Z8000 and the 128k RAM, the M20 has as standard Centronics and RS232 interfaces and an 80x25 display (software switchable to 64x16) with 512x256 graphics, and twin 5¼in floppy drives holding a total of 286k (formatted) each.

Upgrades and expansions include memory expansion to 224k by three plug-in 32k cards, IEEE 488 and twin serial port boards, and very nice colour graphics.

Olivetti's operating system, called PCOS, is a single-task, single-user set-up which, from the documentation, appears rather similar

Commodore's smooth 720

in concept to CP/M but is more flexible and friendlier — it incorporates a 'help' command, for example — and includes password protection facilities for files. The Basic used is more-or-less standard Microsoft, with commands to handle the quite sophisticated display, which includes windows and full graphics control.

A set of diagnostic routines is contained in ROM and is automatically executed on power-up, with any malfunctions being reported on the screen or printer. A disk containing more sophisticated diagnostics is also available.

All this is, of course, useless without some good applications software. The deviation from the now almost-standard CP/M family means that the fast-growing pool of 16-bit software won't run on the M20. Recognising this, Olivetti has produced a number of its own packages, including a word processor called Oliword, a 'data entry, retrieval and update package' called Olientry and a spreadsheet packages called — no, not Olicalc but Multiplan. A number of utilities are also available, including a scientific subroutines library and a system self-instruction guide. A choice of three printers is available, one thermal and two dot matrix, and, of course, you can hook up one of those stylish Olivetti daisywheel units too.

Rather more up-market is the Fortune 32:16. As the name suggests, it's based on the Motorola 68000 chip, which looks like a 16-bit machine on the outside but has 32-bit internal architecture. For £3510 you get 128k internal RAM plus a single 800k floppy and a single-user operating system based on Unix but with a rather neat and considerably more user-friendly shell around it which sensibly keeps the user isolated from the nasties of Unix itself. A twin floppy unit costs £4209 while a machine with a single floppy and an integral hard disk costs £6145 (for a 5 Mbyte disk) or £6848 (10 Mbyte). Upgrade to a multi-user operating system (£348) and you can share the system with other users by adding work stations at £770 apiece.

Surprisingly (especially as the basic machine sells in the US for \$4995), no applications software is included in the price. So you'll pay £348 for what looked at the demo to be a rather nice word processing package, £208 for a spreadsheet and £418 for a database system called IDOL.

Another 68k-based micro launched recently also caters for more than one user, but does it with a network rather than splitting the CPU between users. The Corvus Concept is in fact a very upmarket workstation

designed to hook in to the Corvus Omninet local area networking system, giving communications with other machines and with printers and hard disks. 'Workstation' isn't really doing the machine justice, actually — it's a fully-blown Unix machine just bursting with really interesting features, the most immediately obvious of which is the rotating screen. Well 'rotating' isn't quite the word — it's a two-person job — but in essence, you use the machine with the screen in an upright position (see photo) to give a full A4 display (72 lines of 80 characters) for word processing; if you want to do accounts-type work, for which a very wide display is usually a great help, you simply lift the screen unit up, turn it on its side and put it back after flicking a switch on the back to tell the computer what you've done — the machine then reconfigures itself to the new screen format — 56 lines of 120 chars.

A close look at the photo will show that the Concept has no disk drives. As it's a network-oriented machine, you need to interface it to a Corvus disk drive — £2300 for 6 Mbytes on top of the 'under £4000' for the computer, making it rather expensive for a single-user set-up. Putting more computers onto the network is easy, though, and — impressively — you're not just confined to adding more Concepts; the Apple II can interface to Omninet to give a low-cost terminal where you don't need the full power of the M68000, and Chuck Peddle recently announced that the Sirius 1 will have an Omninet capability soon.

Software for the concept will include Pascal (ISO with full UCSD extensions), Fortran 77, the obligatory word processor and spreadsheet and a CP/M emulator to allow you to run Basic and Cobol.

And there's a very interesting hardware feature inside the Concept — a bus into which a large range of Apple II cards can be plugged, although you will have to re-write the ROM drivers on the cards. . .

Peter Rodwell

A Fortune at your fingertips

Olivetti's 16-bit contender

Corvus with full page screen.

by David Tebbutt

Still going strong

First of all my apologies to those who had to wait for a little while for a response to their letters. The fact is I trotted off on my annual pilgrimage to the West Coast Computer Faire and this knocked a fair sized hole in the month of March as far as ComputerTown was concerned.

Let's have a look at this month's mailbag. First of all, a real livewire by the name of Chris Woodford wrote from Burton-on-Trent with a copy of ComputerTown Burton's first newsletter. It made very interesting reading and, although CT Burton is not yet off the ground, I'm sure it will be soon. If you'd like to help Chris start up in Burton please write to him at 31 Hopley Road, Anslow, Burton-on-Trent, Staffordshire.

John Stafford has a lot to answer for: he kindly wrote an article about ComputerTown Worcester in the magazine *Assistant Librarian*. The result has been a deluge of enquiries from libraries all over the country. Well done John, and thanks.

John Bone of CT Gateshead is co-ordinating the ComputerTown stand at this year's PCW Show. If you'd like to pitch in for a few hours or more, then please contact John as soon as possible. His address is at the back of the magazine (CT centres). John has just sent me a 'shopping list' of machines he would like loaned for the duration of the show. If anyone would like to help out, will they once again contact John as soon as possible. Here is the shopping list: two BBC model Bs with disks, Paper Tiger printer and colour televisions; two BBC model As with TVs; two Atari 800s with disk drives, joysticks and colour TVs; two ZX81s with 16k, large keyboard, printer and flat TVs; two ZX82s(!); one 48k Apple with Softcard and printer; a telephone line and modem; and someone willing to telephone the show from a US network. Phew!! If you're willing to help out but you can't reach John, please leave appropriate messages for me with PCW unless, of course, you happen to know my own telephone numbers. Thanks in anticipation.

A phone call from Peter Kiff updated me on what's happening at CT Broadstairs. Peter and his merry men have been running a 10 week Basic course very successfully. It starts with a re-run of the BBC programme followed by 20 minutes' teaching and 40 minutes' practice. Homework is available for those who want it. At the moment the structure of the course is fairly flexible but, when the first one is complete and they've had a chance to reflect a little, Peter has promised to send me a note of the teaching sequence which they find works for them. I'll let you know when it's available. Incidentally, CT Broadstairs has received a

lot of support from local traders. Rediffusion has loaned a television and video recorder for the course, WH Smith in Ramsgate has lent ZX81s and cassettes — Computer Town acts as a useful testbed for the programs. Apparently, people are turning up on Friday night for ComputerTown then rushing into Smiths on Saturday to buy their own machines! Radio Rentals, too, are offering televisions and a local software house is seriously considering the loan of a computer. It sounds as if Peter and company have got a nice little community thing going there. If you want to join in, help or whatever, Peter's phone number is 0843 67368.

Here are the addresses of the serious looking enquiries this month: Steven Donoghue, Services Development Librarian, Central Library, George IV Bridge, Edinburgh EH1 1EG; Miss P Crabb, Children's Librarian, Warrington Library or 40 Lander Close, Old Hall, Great Sankey, Cheshire WA5 5PJ; Mrs Heather Arnold, 88a Pontway, Warminster, Wiltshire; J Hamilton, Whithorn Computer Group, c/o South Machars Community Education Centre, Whitehorn, Newton Stewart DG8 8PN; C W Franklin, Wiltshire County Council, Library & Museum Service, Bythesea Road, Trowbridge, Wiltshire BA14 8BS; John G Batch, Assistant Lending Librarian, Lowestoft, Central Library, Clapham Road, Lowestoft NR32 1DR; Colin Glover, 116 Whitecross, Abingdon, Oxon OX13 6BU; AJ Reese, 94 Coombe Lane, Bristol, BS9 2NP; Frank Richardson, 65 Norwich Road, Fakenham, Norfolk, N21 8BA; Stephen Robinson, Divisional Librarian, Gillingham, Kent; Philip Colner (or is it Colmer?), 43 Victoria Road, Fordingbridge, Hants SP4 1DD; Tricia Raper, 155 Grace Dieu Road, Thringstone, Leicestershire.

I'm sure that all the above are just

waiting to hear from like-minded souls who'd like to help them get a local 'Town going.

Other letters this month came from London (SW18 and W1), Bordon, Kenton, Holmfirth, St. Louis Grammar School (I didn't note the town), Leicester, Nottingham, Edinburgh, Lympe, Brighton, Paisley, Bootle, Lowestoft, Rotherham, Windlesham.

Finally, my thanks to all of you who wrote and expressed interest in ComputerTown. If you've got half a mind to start one then write for guidelines: appropriate details are in the box somewhere on this page. Thanks too to *Technology Week* magazine who kindly gave us a write-up. Keep those letters rolling in and, if you've a mind to, why not write articles about ComputerTown for your other favourite magazines and papers?

ComputerTown UK! is an ever-growing network of computer literacy centres, where members of the public are given free access to microcomputers, courtesy of those willing to volunteer their time and equipment. ComputerTowns might be found anywhere: in a church hall, a library or maybe in a school after hours. The emphasis is on making computing enjoyable and non-threatening and, because Computer Town is entirely non-commercial, overt axe-grinding of any sort is banned. Guidelines are available for those interested in setting up their own 'Towns: Write to CTUK!, 7 Collins Drive, Eastcote, Middlesex HA4 9EL and remember to enclose a large SAE (A4 would be fine) for your reply. Please don't try to telephone PCW for information because this project is entirely a spare-time activity.

ComputerTown Enfield was formed in April 1981 as a result of a meeting between Alan Waring, Dave Clark and Lesley Blundell, the Deputy Borough Librarian. With the help of Southgate Technical College Computer Club CT Enfield swiftly got off the ground. This ComputerTown has attracted a loyal following of some 30 people and it runs at both Palmers Green and Ridge Avenue libraries. A ZX81 has been permanently installed at Ridge Avenue for use by validated users outside normal CT hours. CT Enfield exists mainly for beginners so as people become skilled they are invited to help out with ComputerTown or to join the Southgate club. Here's a quick list of the people who make CT Enfield happen: Dave Clark, Lesley Blundell, Alan Willis, Dave Howell, David Sharp, Piers Bishop, Nigel Craig, Keith Lawrence, Ron Fellows, Brendan Grehan, Sheila Barford, Tony Terry, Anne Semple, Andy Scott, Alan Tootill, Terry Gerrish, Max Granger, Andrew Lack, Alan Gregory, Kev Pretorius, Ron Green, Derek Bailey and Alan Waring.

Dick Pountain burrows through the letters in our massive 'in-tray' and gets to grips with digital electronics.

READER'S WRITINGS

Over the last few months it has often fallen to my lot to select the readers' letters which are to be published in 'Communications' and the experience prompts me to offer a few observations gleaned therefrom. Some trends are visible which might shed a little light on the way that the microcomputing scene is developing.

Once upon a time (that is, a year or so ago), the letters PCW received fell into four main groups: people reporting tips and discoveries or requesting info from other readers; people making points of general interest about microcomputing, eg, about languages or operating systems; people complaining (usually with justification) about mistakes we had made in the mag or slanders about their product; and gossip and/or in-jokes from people in the trade. All of which is fine and healthy stuff and the clay from which letters pages are wrought.

In the intervening time two or three new categories have started to be seen, however.

First is the complaint about the trade. We could easily fill a special issue of PCW with complaints about the ZX81 RAM pack, the BBC waiting list and various manufacturers' service arrangements or lack thereof (don't worry, we're not going to!). The problem is that we can do very little to help such readers; we can't investigate each case individually, and it is a very dodgy business to make representations to a manufacturer or publicise the complaint without such investigation. We do of course document elsewhere in the magazine the progress on the larger scale bugs delays and foul-ups which beset the industry. But the other problem is that we see both sides of the story from where we're sitting. Without manufacturers there are no computers, hence no PCW, hence no PCW readers; what's more we have some idea of the immense complexities involved in getting a microcomputer to work at all, let alone into a carnivorously competitive market-place, and we have developed a rather worldweary acceptance of the inevitability of cock-up, catastrophe and crisis (usually followed eventually by triumph). It's a young industry, an immature industry in marketing terms, and also a highly exciting one. One day it may grow up so that you can get the same standard of service as when you buy a toaster. I doubt it myself — there'll always be some crazy who wants to push the technology further than it will stand and three more who want to buy it (he will have budgeted for two).

Never forget that the little box which you paid merely the price of a holiday for (the holiday you now need to get rid of the nervous tension) would once have cost £3,000,000,000 and filled 17 wardrobes, etc, etc.

The next category is altogether more tedious; the diatribes, vitriolic attacks and partisan defences of 'my machine' or 'my language' or whatever. I find it really hard to understand how anyone can get emotionally involved with a computer. To me they are still tools, albeit satisfyingly complex ones. I got interested in them in order to learn things and to do that one must always accept that what you're working with now is not the end of the road; it has imperfections and omissions (regardless of whether or not you can afford to rectify them right now) and that recognising and coping with limitations is as important to learning as bragging about strengths. One subject guaranteed to bring a crop of these letters is structured programming and any article (like Borge Christensen's recent ones) that suggests that Basic is in any way less than the perfect programming language. Within the next year or so I predict that Pascal, Comal, Forth or some such will become cheaply available for every popular micro; then, perhaps, it will be possible to give one of them a try before digging in to entrenched positions.

In general I don't think it's necessary or wise to invest ego in anything to do with computers; so many computer disputes are in the end reducible as much to personal style as to any real superiority of one device or system over another. Save partisanship for the soccer season.

The last new category is that of people who write to say that PCW is too difficult and can't we run more stuff for beginners. Apart from the fact that we do run the 'Newcomers' page every month, the point is that beginners don't stay beginners very long in this game and reading articles which go over the same basic ground continually becomes very boring after a while. When you first opened your Basic manual it probably seemed difficult; three months later it's hard to remember what the fuss was about. Now you want to stretch out a little. We can help you there; think of us as a nasty gym teacher or a red-faced sergeant-major or something keeping

you on your toes and egging you on to deeds of glory.

The moral of all this is that if you have a burning desire to see your name on PCW's letters page, your chances are good if you're saying something of general interest, relevance or importance to the mass of microcomputer users rather than making a narrower point, however justified.

But above all, keep the letters coming.

Digital Didactics

Digital hardware has never been my strong point; Rodwell wields the soldering iron around these offices. My last real involvement in hardware was when, at school in the embarrassingly early 60's, we built an analogue computer out of ex-RAF radar parts. It was, of course, the size of a wardrobe, like everything else in those days (the wardrobes were the size of a house) and could solve a seventh order differential equation while delivering a 9000-volt electric shock — I know because I received one. Anyway, to get to the point, we recently received the Superkit from Cambridge Learning, containing a beginner's course in digital electronics which I decided I was in need of and duly tried out.

The kit, which comes in a neat pocket-sized plastic wallet, consists of a small Eurobreadboard, seven ICs, a four-pole DIL switch and an assortment of discrete components: resistors, capacitors and LEDs. The manual is a 170-page document organised as a graded series of experiments with problems set at the end of each chapter (answers are given). The experiments are extremely well worked out, starting from the use of a single AND gate and ending up some evenings later with shift-registers and twisted-ring counters. The explanations and the system of notation for describing circuits are clear and concise and should not prove frightening to anyone who can wire a plug or change a fuse. Two entry points are provided, one for those totally new to electronics and one for those with experience of non-digital electronics. I found the whole business very rewarding, particularly proving De Morgans Theorems by experiment and finding out how a J-K flipflop works — which made me realise that until then I hadn't really understood what makes RAM remember.

The kit costs £20, which we figured to be good value since there is about £10 of hardware in it, before you consider the manual and the instructional expertise you're getting. Recommended for all budding Tom Wests.

Cambridge Learning is at Rivermill Lodge, St Ives, Huntingdon, Cambs. **END**

PCW welcomes correspondence from its readers but we must warn that it tends to be one way! Please be as brief as possible and add 'not for publication' if your letter is to be kept private. Please note that we are unable to give advice about the purchase of computers or other hardware/software — these questions must be addressed to Sheridan Williams (see 'Computer Answers' page). Address letters to: 'Communications', Personal Computer World, 14 Rathbone Place, London W1P 1DE.

Soft sell

Why oh why don't you include reviews of the vast number of programs that are available to the micro owner? You review some of the more sophisticated software and under Bookfare give us a round-up of the latest computer books, but in the area of much of the software advertised in your magazine, nothing.

I have bought a number of programs ranging in cost from £5 to £35 and each time have ordered them cold, unseen and untried, as the facilities did not exist to try them out. In most instances I have been satisfied with the product but there have been disappointments and, at a minimum cost of £5, a point of reference such as a software review would have been very useful.

When purchasing a book we not only have, very often, the benefit of a review but we can look at the book in the bookshop. A software review would help to bridge the gap that exists between what the vendor claims and how the software actually performs. The restriction of machine dependability will place a limitation on the number of reviews that can be undertaken but a panel of reviewers operating various machines could provide a very useful service to the micro user through the pages of your excellent magazine.

A R J Stevens, Orpington

We intend to start in-depth software reviews very soon (we already do Databases). Unfortunately the business of testing is even more time-consuming than hardware Benchtests which is why so few periodicals do them properly — Ed

Beebs' boobs

I believe Malcolm Peltu has missed some important points in his review of the NEC 30 Hour Basic book. I bought the book primarily for my computer-naïve wife, but have found a number of errors in the text. While I agree that the book is a reasonable introduction to Basic, I think the errors should be mentioned, especially those directly concerned with the BBC machine.

For example: throughout Unit 3, BBCers are told to omit the semi-colon in INPUT statements — they should, in fact, replace the semi-colon with a comma; some of the alternative PRINT statements for BBCers are incorrect; in Unit 9, IF

EOF #B=-1 is used as the BBC equivalent of IF EOF(1), when IF EOF #B works perfectly well.

There are other errors (even in the errata!) not directly concerning BBC Basic and, although anyone familiar with computers will spot them quite easily, some people will be awfully confused — I understand around 50,000 copies have been sold.

For a course that is being sold on the back of the BBC machine, the constant marginal notes for BBCers are a pain. A separate edition should have been produced — and perhaps your review should have been written by a BBC user (I don't charge much!).

David Budd, Manchester

Unfair to expatriate

I recently became rather excited about the BBC micro-computer, having heard a lot in its favour from fellow expatriates here in Stuttgart. And so I dutifully sent off a letter to Aspen House, Kettering requesting a price list for the BBC microsystem along with a query as to whether a system could be sent to me directly in Stuttgart. I was rather surprised at their response. When I opened their letter I found my original letter (very useful!) and a xeroxed reply-sheet obviously used to shake off the more troublesome customers. A small tick in the box against the line saying orders could not be accepted outside the UK was the only information. No price list or other information was sent. I must comment that such an unprofessional response was not expected and does not really enhance the image of British firms here on the continent.

However I would still like to buy a BBC micro, so can anyone tell me what the latest price of a BBC micro model B is and how I can order one from Stuttgart (W. Germany)?

R W Lewis, Ditzingen, Germany

Atomic radiation

I have discovered a useful, and rather unexpected, use for a radio. It may be used to discover whether a computer is processing, without interfering with its operation.

The radio needs simply to be tuned to the FM band (though LW will also work

well) and sat on, or near to the machine. Assorted noises will come through the radio loudspeaker, the volume and tone of noise depending on what the machine is doing — eg, if you press a few keys when the machine is inputting something, you will get a different tone for each key (on an Atom at any rate!).

Perhaps a more sensible use is as follows: On the Atom, the cassette operating system messages are decidedly unhelpful in telling one whether the machine is still loading (or saving) a program, or if it has 'crashed'. The only way to find out, without stopping the load, is to sit said radio on the Atom and listen to the squeaks and gibbers that issue forth. With a little practice, one becomes quite adept at identifying what the machine is doing, just by listening to the radio!

J R Chapman, Dulwich

Thanks for the tip Mr Chapman — I do hope you realise though that the micro industry is spending thousands to eradicate RF emissions! Let's hope the Home Office isn't reading this — Ed.

Apple not outdated

In your March issue Guy Kewney, in his 'Newsprint' compilation, is in many ways inaccurate and in several others at least unfair in what he says about the Apple system.

I would argue strongly that, far from being out-of-date design, this computer has kept abreast of current developments and has in some cases led them. Why does he think it is that there are so many manufacturers who still consider it well worth their while to mount new design and marketing exercises for Apple-compatible products and software if the future of the machine is as short as he thinks? The existing and potential user base for this most versatile of computers is still enormous. The 'competition' comes nowhere near in terms of availability of professional software in almost every major computer language; choice of professional printers, floppy and hard disk systems as well as most other kind of peripheral.

I would feel some sympathy for Guy when he says that the prospect of experimenting with other interfaces gets a bit frightening, if it were not for the excellent quality of the instruction books. The friendly way in which they

are written dispels any qualms one may have had. No other computer of any make or size, within my experience, has such helpful and complete manuals. In particular, the tutorial is second to none for the absolute tyro. Every Apple peripheral and interface card has the same standard of helpful instruction book. Many have photographs to assist with installation and they all take you through the relevant instructions for the product.

Does he not know that, in addition to the standard Apple 5¼-inch floppies, there have been several 8-inch floppies and several hard disk systems, including removable platter types for the Apple II, for over 2 years?

It would seem that he has not read his manuals (Tutorial p 52, also see index for editing), or he would know that on-screen editing is available on the Apple II with complete cursor control. Insertion, deletion (character and end of line), and program line copying are all provided in firmware. During program writing, the Apple Toolkit provides many useful programming aids. Since it is RAM-resident it need not occupy run-time memory when it is not needed. A ROM resident toolkit normally occupies valuable address space whether you want it or not.

One final word, the Apple is aimed mainly at the serious commercial user. This being so, it is the Apple dealer, not the user, who sets the equipment up and plugs together the particular configuration for that customer. This major class of user is therefore not involved in the 'nuts and bolts' of installation, nor should he be. This reliance on the Apple dealer is all part of the Apple system and is built into the pricing structure. The cut-price cowboys (and there are unfortunately quite a few in London) cannot provide professional standards of support without charging heavily for it. On the other hand, the properly organised Authorised Apple Dealer/Service Centre provides not only the full installation service, but very often at least a day or two's assistance with the familiarisation, operator training and help with the use of various programs. Such high standards of service are normally required by the non-technical commercial client and are to my knowledge only provided by the serious Apple dealer, not the cheap mail-order operator out for a fast buck.

I hope that the above will assist Guy in coming to terms with a machine which can outshine all others in this field. The longevity of the Apple II as a design concept has enabled it to gather all the accoutrements required of a business-oriented machine. It is worth noting that it is those aspects which have been developed and fine-tuned for this most unforgiving of markets, rather than the more trivial games facilities. It remains to be seen whether Apple can get it as right again with another machine.

Hugh S O'Neill, Selsey

Depreciate, skip on zero

The enclosed cutting from today's *Edinburgh Evening News* causes me to wonder how successful I'd be trying to sell my UK101 complete with numerous modes and add-ons. I can't help but feel that many advertisers in 'Transaction File' are very optimistic! I'd like to sell my machine with colour, sound, etc, but I think I'd be lucky to get a quarter of what I paid for it. (I ordered a BBC computer early in January.)

Dave Henniker, Edinburgh

GOING CHEAP—A COMPUTER WORTH £50,000

A Midlothian college are to get a £50,000 computer — for next to nothing.

Midlothian District Council, trying to dispose of a five-year-old ICL 2903 machine, found there was a lack of interest from the trade.

One offer was free removal, and another was to pay £1 for each disc cartridge.

Yesterday the council's finance committee declared that the computer, worth £50,000 when new, should go to Esk Valley College — on the above terms.

common; they are not perfect. When the price tag reaches £1000 and over they should be given less than four pages of review. A writer like A F T Winfield gives more of interest in just two pages, but you haven't even looked at his Hullforth.

Olaf Baaken, Norway

I shall be looking at Hullforth as soon as I can get hold of a Nascom. And incidentally PCW is a magazine for all microcomputer users, not only hobbyists, common or otherwise — DP.

Agora-phobia

MP Ian Lloyd's concern (Commons Report — *PCW* March 1982) with the imminence of 'electronic democracy' is both understandable and laudable. It would be an absolute disaster! The childish idea that a complicated modern society comprising individuals up to multi-nationals could be managed by millions taking time off from *Coronation Street* or their TV games to press a few buttons is as ludicrous as it is terrifying.

The concept rests upon the assumption of an 'informed community'. This assumption, no doubt expressing the aspirations of the 'informers', is biological rubbish. There has never been an informed community and there never will be. The human mind is like a computer in many respects. It will deal with all data fed to it according to its program. Unfortunately for the 'informers', every human mind has a different program. Information technology can disseminate information but it cannot ensure its absorption. Even if it could, TV-watching pollsters totally isolated from the realities under discussion at best would merely be ineffectual or at worst totally anarchistic.

Electronic AGORA is a juvenile nonsense born of

technological enthusiasm rather than political maturity. If it seems to be on its way in the US, we should be warned rather than enthused. Political acumen, except on the part of career politicians, has never been very high over there. But this apart, the whole idea is theoretically indefensible as a democratic mechanism.

The populist view, 'All the people, every issue, every time', is philosophically unsound. Populist democracy, or any other sort, only makes political sense if the communication traffic is in both directions. That is, when all who have power to vote also have power to participate in the debate. In the present, and foreseeable future state of the art this electronic Tower of Babel is just not on. That being the case, government by electronic referenda, far from being the extension of democracy its proponents claim, would be a move towards totalitarianism with real power resting with those with access to the media. Shades of the EEC debate and 1984!

Information dissemination is not the same as information provision. Information arbitrarily directed at people as envisaged in 'electronic democracy' suffers an altogether different fate to the information consciously sought from such as Prestel, Ceefax and Viewdata. Electronics cannot overcome psychology. Viewers unconsciously regretting missing *Crossroads* offer decidedly less receptivity than conscious applicants to an information service.

And this is the crux of the matter. Democracy, electronic or otherwise, can only be effectively run by those who wish to participate in its running. If this means, in practice, too few people involved or that too many partisan views get expressed, this is a fact of life that has to be faced. The fundamental

realities of political parties, trade unions, pressure groups, vested interests and the like will not go away. Neither can they be circumvented by introducing a spurious wider suffrage of relatively disinterested button-pushers. These latter could swamp the political activists and probably would. But what would these traditional elements do? Give up the struggle in the face of an electronic smothering of their hopes and aspirations? Not likely! They would go further underground than they are already and carry on the fight.

Thus more fights, squabbles and eruptions of discontent. More grist to media sensationalism and more and more 'inexplicable' events for our electronic pollsters to pronounce upon. And deeper and deeper into the mire of unresolved conflicts would we sink. No, let us have interactive cable television by all means. All ways in which views may be expressed should be encouraged. But let us treat it as a discussion medium because it can never effectively be more, not as a form of government.

E. A. Hawkins, Ipswich

Hey doobrie

This word was in common usage in the Middle East over 30 years ago, I know, I was there. It may be Arabic.

Don't ever be conned into printing zoobrie or similar sounding word which is Arabic!

For an old man of 55 I find *PCW* very helpful and read it cover to cover. The ZX81 tips are interesting but the programs seem a long time coming.

Ray Mullard, Guildford

Thanks for your doobrie, Ray, this whatdoyoucallit is now closed — Ed.

Norse Nascom

I have a complaint. Why haven't you presented the promised test report on Hisoft Pascal-3 for Nascom (now also for MZ-80K)? You said (was it last November?) that you had asked for a tape and the manual. Now, if a rather comprehensive report appears next month I shall forgive you, otherwise not!

Generally you should watch your own ads and give new British firm- and software more and better attention.

Your magazine grows fatter every month, but I wish you would be slightly less trendy and keep more to the practical side of personal computing. That is what the common hobbyist has to do. All these shining new computers have just one thing in

DON'T TOUCH THAT COMPUTER!

1 Year Subscription (U.K. only)	£11.50	(We will send you two free issues at the end of your subscription before reminding you to renew. You get 14 issues for the price of 12 issues if you subscribe now!)
2 Year Subscription (U.K. only)	£19.50	(You receive 24 issues, saving yourself £3.50 off the full current subscription price. Plus you protect yourself against future increases in cover prices and postal rates which will probably amount to a saving of £5.00 over the period.)
3 Year Subscription (U.K. only)	£29.50	(You receive 36 issues, saving yourself £5.00 off the full current subscription price. Plus you protect yourself against future increases in cover prices and postal rates which will probably amount to a saving of £7.00 over the period.)

You can pay for your subscription to PCW by cheque, postal order or by using Barclaycard (Visa)/American Express or Access. And you don't even need a stamp for your envelope. Use the coupon below or the subscriptions card bound into the magazine.

Why do more people read PCW than any other microcomputing magazine in Europe? Subscribe today!!

Accounting Business Systems

TABS

**The UK's largest
selling accounting
business software
already on the
latest generation
16 bit micro...**

ACT SIRIUS 1

At last! A 16 bit micro computer to put the UK's largest selling accounting business software on.

TABS highly successful modular accounting business software is already running on the first new generation micro-ACT SIRIUS I.

Together, TABS proven software and this 16 bit personal computer combine to give the end user a much

faster and more powerful system never before available at the micro end of the computer market.

We think you'll find it an unbeatable combination.

If you'd like a demonstration in London we'll be at the National Microprocessor and Electronics Centre, within a few minutes walk from Tower Hill tube station, every Thursday

10.00a.m. to 5.00p.m., or visit our resources centre in Andover.

Why not send for our 32 page booklet which outlines the capabilities of each module, our comprehensive training facilities, video training tapes, installation and hot line support services.

Financial Flow in the TABS Accounting System

NOT CALCULATOR CORNER

SHARP PC1500

By Dick Pountain

It has been quite fascinating to watch at close quarters the battle for supremacy in the hand-held computer market over the last two years. Sharp got in the first blow with the PC1211, which was the first hand-held with Basic; Casio retaliated with the 702p which is faster and has more memory. Meanwhile, Hewlett-Packard strapped on quadruple memory and an interface loop to its established HP-41C calculator. Now Sharp has come back with a blockbuster, the PC1500. Though it is clearly related to the 1211, it's an all-new machine which builds on the good features of the old but is very much more powerful. And it features a truly remarkable four-colour plotter/printer which has no rival at present.

Hardware

The PC1500 computer unit is enclosed in an alloy-faced ABS case of considerably larger size than the 1211 (195x86x25.5mm), which reflects the use of four AA size batteries to power the expanded memory instead of the normal silver oxide or lithium 'button' cells. These give around 50 hours of use; a 6V mains unit is available for desk use. Opening up the case reveals a two-board computer with 14 ICs including the processor, a full 8-bit CMOS unit of Sharp's own manufacture, 16k of ROM and 3.5K of on-board RAM. A compartment on the back of the case next to the batteries has an edge connector for an expansion RAM module (4k on the test machine; 8k is due this month). All of the RAM is, of course, non-volatile CMOS memory.

The keyboard is of qwerty layout; similar to the 1211's but with rather larger keys which greatly improves its ease of use. The most noticeable difference is the row of six function keys under the display, of which more later. Upper and lower case letters are obtainable either by the SHIFT or by a key called SML (for small) which toggles a caps-lock. The display is a 26-character LCD job with annunciators for operation and angular mode and BUSY to show a program is running.

Calculations are performed to 10 figures (dynamic range of $10^{\pm 99}$) plus a two-digit exponent when in scientific notation. The speed of calculation is very greatly improved by the 8-bit processor; the 1500 ran my calculator Benchmark (see 'Calc Corner' Jan 82) in 13 seconds, which beats the previous best Casio 702 (20 secs) quite comfortably. I also ran the PCW Benchmarks out of interest; to put things in perspective, even this is an order of magnitude slower than a typical 2MHz, 6502-based machine.

The 1500 has, like the 1211, four modes of operation, but the ergonomics have been considerably improved. The MODE key toggles between RUN and PROgram mode. The DEF mode now has its own key and the top keyboard

row has Basic reserved words permanently assigned; 18 of the other keys are available to have user programs assigned. The RESERVE mode now operates on the six function keys under the display and allows 18 commands (including carriage returns) to be assigned to them and used in RUN or PRO mode. This is achieved by a key ϕ which selects one of the three definition sets flagged as I, II and III in the display. Each command may be labelled with a string, and the RCL key displays the six labels over their respective keys. Reserve assignments are stored in 198 bytes of protected memory just below the Basic program area and can be saved to tape. The arrangement works very well, unlike that on the 1211 which was too fiddly to bother with. The editor is

the same as the 1211's with full four-way movement through the program and insertion and deletion.

Basic

The interpreter on the 1500 is a full implementation of a Microsoft-style Basic and includes PC1211 Basic as a subset, together with 62 extra instructions. In particular, a full set of string functions is provided, including CHR\$, and ASC, STR\$ and VAL. Variable handling is orthodox, unlike that of the 1211 which configured the memory as an array. Names can be of any length, though only the first two characters are significant, and two-dimensional arrays are permitted. Strings are limited by default to 16 characters but may be

NOT CALCULATOR CORNER

DIMensioned to up to 80. A nice touch is that variables with names A-Z are stored in a separate protected area which is not cleared by RUN, thus allowing values to be accumulated between runs. This area can also be used as an array called ∂ or $\partial\$$.

number] to incorporate data into programs.

A real time clock-calendar is built in which displays in the rather unwieldy [monthdayhour.minutessecond] format when summoned by TIME. Together with the built-in beeper (programmable

words and ASCII for the rest). A command called STATUS returns the number of bytes remaining (STATUS 0) and used (STATUS 1) as well as the address of the top of program and the bottom of variables (2 and 3). Basic begins at 16582, immediately above the reserve area, and variables are stored from 22528 down.

The basic interpreter/monitor sits between 49152 and the top at 65536. By CALLing into the right location in the latter area you can dump the contents in character-encoded form but until Sharp issues both the processor instruction set and a monitor listing nothing very useful can be done in this way.

To summarise, this Basic is far superior to that on any previous handheld computer and even to that on some home computers. The only things I can find to bitch about (one has one's credibility to consider...) are the absence of DELETE and RENUMBER and the unwieldy format of the DMS conversion routine which uses a single packed decimal number instead of having proper 01 11 separators. It would also be nice to see some built in statistics routines on a machine of this type, but that is perhaps stretching a ROM too far.

Printer & Cassette Interface

The CE-150 is one of those bits of machinery that must elicit a cry of admiration from anyone who has any respect for human ingenuity.

The unit combines a cassette interface to control two recorders with a miniature four-colour plotter and comes with a neat travelling case which has room for extra paper rolls, leads, pens and a micro cassette recorder. It is powered by built-in rechargeable batteries which provide juice for 1½ hours of continuous printing and require 15 hours' charging from the mains unit. The unit is usable under mains power at all times. When mounted, the PC1500 takes its power from the CE-150, thus saving its own internal batteries.

The plotter is a marvel of miniature engineering. A rotating drum like a gatling-gun contains four inch-long felt tip pens in black, red, green and blue; the required colour being swung into the firing position on request. Removing and loading the pens is quite easy for those with average motor control; it is recommended that they be removed and capped to avoid drying up when not in use.

The device is a true plotter in that it draws continuous lines, not dots; and the paper is moved in both directions. The set of plotting commands provided would shame machines at ten times its price. In text mode it acts as a printer, using the PC1500 character set with a choice of print sizes from 1.2 to 10.8 mm cap height selected by the CSIZE command. ROTATE [0-3] determines the orientation of the printed text according to the points of the compass; it can be vertical or even upside-down. COLOR [0-3] selects the colour printed. LCURSOR positions the pen on the 58mm wide paper in one

RND n generates a random number between 1 and its argument n and is repeatable unless initialised by RANDOM. In addition to PAUSE for output, there is a programmable WAIT [nnnnn] which holds a display for nnnnn units of 1/60th of a second. The PRINT USING has facilities to provide asterisk fill, commas, signs and the inclusion of characters in numeric formats. ON ERROR GOTO is provided for error trapping and TRON/TROFF for debugging. Another welcome 'big' Basic feature is the inclusion of READ... DATA... RESTORE [line

for pitch, volume and duration), this can be used as an alarm or to date-stamp printouts.

LOCK/UNLOCK is a clever feature which allows the programmer to lock the machine in its current operating mode; this stops a ham-fisted user accidentally corrupting programs or otherwise wreaking havoc.

Proper file handling is enabled by PRINT# and INPUT#, which allows multiple field records; CHAIN and MERGE can be used to segment and overlay programs from tape.

As if all this 'real computer' stuff was not enough, there is even a facility for dot graphics! The display is treated as a 7x156 dot matrix and the GCURSOR statement selects any column of 7 dots; the GPRINT statement then allows these dots to be set or unset by specifying a decimal or hex number whose binary representation is the required pattern. GCURSOR can take a string of arguments to define a whole shape in a single statement. POINT reads a column-value from the display.

No, your eyes are not deceiving you, I said hex. Not only does the 1500 allow hex (prefixed by an &) to be used in any expression but it has PEEK, POKE and CALL as well! You will look in vain for any reference to these in the manual (a Sharp spokesman tells me that a new manual, which covers machine code operation, will follow in time) but they work. With the help of PEEK I was able to uncover some of the labyrinthine twists of the 1500's memory map (also not in the manual) and to dump Basic programs and hence discover the system of tokens used for storage (two-byte codes beginning with 240 or 241 decimal are used for key-

All this stuff going around about Information Technology year makes one wonder where it is all likely to lead. What exactly does the future hold in the brave new world that we are constructing — or appear to be constructing (I sometimes get the feeling that it is in fact constructing us)?

The question is an interesting and important one, for, while there seems to be overall agreement that we need to exploit Information Technology, there seems less clarity about what bits of the stuff are, or may be, needed, and exactly why they may be needed. These are important aspects because there is the considerable danger of a variety of boats being missed, either because the technology has been adopted far too keenly for its own sake, or has been adopted not at all because people have been frightened off.

Such topics very often form the subject for debate at lunches or dinners populated by the cognoscenti of the computer and 'Information Technology' industry. The arguments are usually pretty erudite, and fully consider the subtleties that are inevitably involved.

For the average person in the street, however, such debates might just as well be in Swahili. It is an observable fact that among the non-computer-oriented populations of the world, the concepts and applications of computers are very poorly understood. Not only that, they remain poorly understood, no matter how much verbiage those 'in the know' try to lay on them. It is only when something specific happens to one individual — often an inconsequential event of no particular value to others — then suddenly that individual makes the transition from 'non-understander' to the state of enlightenment. It's all rather like Zen Buddhism.

Information Technology is now suffering from this encumbrance. IT (if you'll pardon the word) is important for a wide range of strategic, productive and life-enhancing reasons that are too complex to fully enter into here. But any coherent use of it will come from its natural adoption by users, rather than its imposition by a necessarily small body of planners, no matter how 'correct' they may be. To be effective as an integrated part of our future, Information Technology should have the natural feel, the 'oneness', of a place like Castle Coombe, not the sterile 'correctness' of a high-rise building estate.

But to get to the former, as wide a cross-section of the population as possible has to participate in the design and implementation of the Information Technology infrastructure, and if they don't understand the subject that becomes very difficult. Hence, of course, Information Technology Year, 1982.

This aims to publicise and support Information Technology in a wide range of applications and areas. In some it has already done well, especially where there is an existing and definable user interest — for example in business-oriented applications.

It has also been involved in pushing the subject in other areas where the acceptance has been somewhat slower, but where its long term impact is liable to be far more significant. One such area is the use of IT in the home.

It is now necessary that, for a short paragraph, I come clean. I have had some involvement with this myself,

Banks Statement. IS IT WORTH IT?

Martin Banks questions the relevance of Information Technology Year.

having done some work on the showing of 'IT in the Home' at the Ideal Home Exhibition. This was a project to try and demonstrate some of the ways Information Technology may change the way we live. It was designed to promote interest, and maybe pose some questions, for only through lodging questions in people's minds firmly enough that they wish to seek an answer will there come any understanding of what IT is all about.

I would not dare attempt to assess the success of the project, certainly objectively, for as one of the team involved in its development I am, for better or worse, too close to be objective. There are some aspects which bear some consideration, however, even from a subjective viewpoint.

The main ones are those already stated: getting people sufficiently knowledgeable to contribute to the design of the IT system, and what actual products they are likely to come up with.

The application of IT in the home is a nebulous area at the best of times, where only one or two specific applications come readily to mind. At the Ideal Home, where the IT project was given extensive bed and board in the show homes of Barratt Developments, these areas were satellite communications, the office in the home, and energy management. Even then, it was only the Office in the Home concept — in this case based around a brand new ICL Personal Computer (nee Rair Black Box) coupled to a Prestel interface developed jointly by Johnson Microcomputers and B&B Computers — where the issues were fairly clearcut.

The technology does and will allow more people to work either part-time or full-time at home. The demo at the Ideal Home simply showed how.

But even satellite communications, a subject which at first sight is fairly understandable, has some extensive grey areas, both in terms of telecommunications and telephones, and broadcasting. The same can be said for energy management, where the enhancements that are now possible to the simple control systems of today often require great gobs of lateral thinking for their implications to be fully appreciated.

And appreciation is the problem. There is an ancient law (or if there isn't there should be) that says that people will not accept a new technology any faster than they can see a good reason for having it. Once people see the reason, then they usually become very adept at thinking up entirely new uses for the

technology, whatever it is.

To achieve this, however, poses considerable problems for, though publicity helps, it also hinders many people. It just creates an awareness of something 'out there' that they do not, and firmly believe they cannot, understand. In the long term the solution would appear to be the provision of ways in which people

can see IT in action and make use of it themselves. In days of yore there must have been considerable doubt about the railway or electric light until their uses were appreciated. Our trouble, in terms of some of the obvious strategic requirements of exploiting IT, is that we do not have the time to wait for that appreciation to grow. Unfortunately, there seems no way in which the process can be speeded up.

As that appreciation eventually grows, however, the home will become a goldmine of potential applications of IT-oriented products — from the banal to the truly ingenious. There is so much scope for the lateral thinker in this area, for that classic phrase 'we have the technology' is to all intents and purposes now true. This means that at last the technology actually becomes secondary to the application, that the end makes use of the most appropriate means rather than the means dictating what end is achievable.

For the Ideal Home Exhibition we tried to produce such an application. Whether we succeed is arguable, but the end result created some interest if no-

thing else. That result was the 'Talking House', a system whereby the home owner would be able to interrogate the home using a telephone.

One thing this exercise demonstrated above all else is that, despite the propaganda, things can be achieved very quickly in the UK. The idea was simple enough (a classic 'back of a fag packet' design). Build a computer system that would respond with speech to the sensed input from a telephone keypad. In that way, the house could be interrogated about itself. A typical Q and A would be, for example, about the current temperature. 'The temperature is one-eight degrees', the house might say. To change that, key in the numbers — a simple and direct 'communication'.

From that simple concept to the finished article on the stand at the show took just under three weeks. A Comart Communicator became the basis of the system, which was connected, with some burned midnight oil and the odd oath by Ross Electronics and Millenium (the engineering team), to a Texas Instruments Superspeaker speech synthesis board. All that was missing to make

it a real product rather than a demonstration was the interfacing to such items as the central heating controller.

In the end, the most interesting aspect of the exercise was to observe the reactions of the public, especially after the media (and in particular the radio) latched on to the obvious gimmick aspects.

Some just thought it silly (and maybe they were right). Some thought it sounded extremely odd for 'a tape recorder' and failed to comprehend the idea of speech synthesis. Some could see how it could be used — extended even — but then they tended to come from the electronics industry so understood anyway. Some just came to listen because it had been on the radio. Some, like a blind lady who came especially to hear it, could obviously visualise much greater scope for its application in the home.

This was just one potential product for the home. It created interest and in some cases real appreciation not only of its specific details but also of what it represented conceptually. It is highly unlikely that it will ever become a real product. It is to be hoped however that the appreciation does become real. **END**

Peter Rodwell takes the lid off Sharp's latest model, the replacement for the popular but ageing MZ-80K.

Considering their track record in the car, camera and domestic electronics markets, the Japanese have been remarkably slow to flood us with their microcomputers. Way back in '79, the first Japanese micro company to sell in the UK, Sharp, launched its MZ-80K with not so much a bang as a murmur: the machine was aimed at the Commodore PET market and offered a fairly similar concept in that it was an all-in-one unit combining screen, keyboard, cassette player and electronics in a single box.

Although other Japanese manufacturers have since launched in the UK, and the long-expected invasion now appears to be gearing up, Sharp's early entry has stood it in good stead and it now has a commanding lead over other Japanese companies.

Yet Sharp appears not to have learned much from its American rivals: the '80K was launched with virtually no software to support it (apart from its cassette Basic) and no add-ons at all at a time when the PET and TRS-80 had built up respectable user, software and add-on bases. Its Basic had to be loaded from cassette when other machines had it in ROM for instant use on power-up and it had a bizarre keyboard, only marginally better than the original PET keyboard which Commodore dropped fairly quickly in favour of a proper unit.

While Sharp built up its model range with the PC-3201 and the MZ-80B, both aimed primarily at the business market, and added an interesting pocket computer programmable in Basic, not a great deal was done with the '80K apart from the introduction of a printer and disk drives — the 'funny' keyboard was kept and Sharp did not introduce any other programming languages, which would have made the cassette-based Basic a reasonably logical idea.

Now, though, after three years and 10,000 models sold in the UK (about 100,000 worldwide) — and with pre-death price cutting giving the machine a sudden sales surge in the last six months — Sharp has killed off the K and replaced it with the MZ-80A. (And before you ask, no, I can't figure out the logic of starting with 'K', progressing to 'B' and then bringing out an 'A' either.)

By the time you read this, there should be no more 'Ks on sale anywhere — certainly Sharp had sold out by early April — and you'll have missed your chance to pick up a 48k home computer for £350 or so. For the MZ-80A you'll pay more — £549 including VAT, for the basic unit — and naturally one of my main objects with this Benchtest was to discover whether you ought to be kicking yourself for not grabbing an '80K when you could.

Hardware

Physically, the MZ-80A looks quite different to the '80K: yes, it has the same basic layout, with the screen taking up the left part of the box and a cassette

deck on its right side, but the cabinet is more pleasantly styled, although it's in plastic instead of the '80K's metal construction.

The MZ-80K's odd keyboard, on which it was impossible for any ordinary person to touch-type, has gone and is replaced by a proper typewriter quality unit with a very professional feel to it; there's also a conventional numeric pad to the right of the main keyboard.

The K's black and white screen has been replaced with a slightly smaller (21cm) green model, but this has the same 40 characters on 25 lines display as the 'K; earlier rumours that the 'A would have the same display as the MZ-80B (ie, proper 80x24 text and good graphics) can now be ignored, which is a pity. The 'A's graphics are those of the 'K — what the manual describes as 'pseudo-graphics', which means a chunky 80x50; rather poor by today's micro standards.

As with the MZ-80K, access to the machine's interior is gained by undoing a couple of screws and hinging back the whole upper half of the casing — there's even a 'bonnet prop' inside to keep it open, too. Sensibly, the 'A's display tube and video electronics have been mounted on their own sub-frame connected to the lower half of the case (on the 'K these hinged upwards with the lid), although the cassette deck is still mounted in the lid. As one has grown to expect, the interior is a model of Japanese neatness and thoroughness, with no flapping wires or exposed mains connectors.

One large PCB houses all the computing electronics. At the machine's heart is a 2 MHz Z80, as in the 'K, a surprise since an easy and obvious upgrade would have been to uprate the processor to at least 4 MHz. At the front left-hand side of the board is a block of 16k dynamic RAM chips forming the 48k of user RAM — there are no empty sockets for a further 16k to expand to the processor's full 64k capacity but a glance at the memory map shows why — a 4k block is taken up by the monitor ROM and another 2k is used for the video display. Next to the monitor ROM chip is an empty ROM socket intriguingly labelled 'user'; this is undocumented in the manual and is presumably for your own monitor ROM or Toolkit or whatever, although how this would be activated remains a mystery — it can only be a matter of months before we read how in 'TJ's Workshop'!

Nearly all of the important chips, including the CPU and the RAM chips, are socketed, by the way. This is usually a good sign as it makes servicing easier but Sharp has built up a formidable reputation for reliability so unless you're very unlucky you won't need this particular feature.

The '80A has a sound generator, with a loudspeaker mounted pointing downwards under the numeric keypad. All other I/O connections are brought out

at the rear of the main board and to interface peripherals, such as a printer or disk drives, an expansion unit is required; this bolts onto the back and houses up to four plug-in interface cards, a neater arrangement than the separate expansion unit of the '80K.

Also at the back are the on/off switch, a reset button, the display brightness control and the sound volume control; on the '80K, this last was inconveniently sited *inside* the cabinet!

Cassette Basic

At power-on, the system enters the ROM-based monitor. This provides only minimal facilities — loading Basic or a machine-code program from cassette, booting an operating system and/or language from disk, jumping to an address in memory and executing the program there and toggling on or off a beeper which sounds whenever a key is pressed.

The monitor also handles I/O for the screen, keyboard, music system and tape, and recognises a limited group of control codes which roll the display up or down (the screen acts as a 1 kbyte 'window' in the 2 kbytes video memory), generate a '<—>' sign used as a delimiter under Sharp's FDOS, toggle between reverse and normal video, and alter certain system parameters to enable the '80A to run '80K Basic programs — more on this later. Additionally, there's the facility to change the way the shift key works; normally this functions in the *opposite* sense to a normal typewriter in that the unshifted keys provide upper case characters and lower case is obtained by shifting; this makes Basic programming easier. Hitting CTRL-A reverses this, putting keyboard into normal typewriter action.

The basic MZ-80A comes with Sharp's SA-5510 Basic on cassette; this takes just over 1½ minutes to load, although while you're sitting waiting for it to happen it feels like much longer. As far as I could make out, this Basic is functionally the same as the MZ-80K's Basic and is virtually to Microsoft standard. Its few oddities centre around machine-specific items such as the sound generator, for which there are MUSIC and TEMPO commands and extensions to some commands to send stuff to the printer or cassette: LIST, for example, LISTs on the screen while LIST/P lists to the printer; similarly with PRINT and PRINT/P, while PRINT/T prints to tape.

The cassette handling is very easy. Programs can be loaded simply by positioning the tape at the correct spot, using the tape counter, and typing 'LOAD', upon which the system prompts you to press the play key on the cassette unit. As soon as the system finds a program it tells you so, displays its name and gives a message to say when LOADING has started. Once the program is loaded, the computer switches off the tape drive. If you don't know the

MZ-80A

BENCHTEST
PERSONAL COMPUTER

position of the program you want, you can instead specify the file name with 'LOAD "Program"', and the system reads through the tape until it finds it. LOADING can be aborted at any time with the break key. It's just as easy to SAVE a program and there's also a VERIFY command which allows you to check that the SAVE has been successful. Data can be written to and read from tape under program control using PRINT/T and INPUT/T.

If you want to feel at home in the world of computers, you'll want the best home computer in the world.

We live in the age of computers.

Coming to terms with them and enjoying them is part of coming to terms with the twentieth century.

A few years ago, a computer would have filled a fair-sized room. Now microtechnology has allowed Commodore to produce a home computer, the VIC 20, that's no bigger than a typewriter yet performs miracles.

FOR BUSINESS. OR PLEASURE.

VIC can keep your diary up to date. Teach you mathematics. Play an enormous range of video games. Even play a piece of music to soothe your worried brow.

In fact, you and VIC can do almost anything better. Keeping records of family finances, sorting out and working out household accounts, being one step ahead of the bank manager or helping your own business be more businesslike.

VIC'S THE BEST. BY FAR.

Contrary to popular belief, computers are really rather friendly. VIC is particularly easy to understand. It's what the computer people call 'user friendly'. The typewriter-type keyboard is easy to use. It even tells you about mistakes you might make.

If you're technically minded, here's a reminder. VIC has a 5k memory expandable to 27½k. (That means you can put in a great deal of information.)

But what makes the VIC the best home computer by far are features that are just not available in most other home computers. Features like colour, computer graphics and sound.

PLUG IN AND YOU'RE OFF.

VIC plugs in to any television set, colour or black and white. (We even fit a 13 amp

plug, so you can play with VIC right away.)

You don't have to learn a special language. VIC speaks English, just like you. With the help of our handbook, you will begin to feel at home to the world of computers in no time at all.

COMPUTER SUPERMARKET'S GUARANTEE.

Buy through Computer Supermarket and you get exactly what's promised. We guarantee you that.

Every machine is thoroughly tested before it's despatched. And every machine is guaranteed for twelve months on parts and labour. (Not that you'll need it, of course.)

In the unlikely event that you don't want to keep your VIC, just return it, in its original packaging, within 30 days and your money will be completely refunded - in addition to your statutory rights.

FREE PROGRAMS.

Apart from the more practical things like accounting, and the more pleasurable

things like video games, you can put VIC to literally hundreds of uses.

There are pre-recorded programs on many different subjects. You can develop your own programs and store them by using ordinary cassette tape.

The special Commodore cassette deck is on offer at only £39.50. If you buy VIC and the deck together we'll send you a 6 program pack to start you off that's absolutely free.

YOUR FUTURE WITH VIC.

It's a big step into the future. Understanding the future.

Having fun in the future. Even saving money in the future.

Every member of the family, especially the young, will feel at home with VIC right away. So

send in the coupon. We're sure you'll find the best home computer in the world will make the

world of difference to you and your family.

Computer Supermarket Ltd., Douglas House, Queen's Square, Corby, Northants. Tel: (05363) 61587/8. Reg. No. 2646589. Prestel No. 400400.

Computer Supermarket Ltd., Douglas House, Queen's Square, Corby, Northants.
Please accept my order for _____ VIC 20's at £199.99 each inclusive of packing, carriage and insurance.
Please send me _____ Cassette Decks at £39.50 incl. Free 6 program cassette if VIC 20 and Cassette Deck ordered together.
I enclose Cheque/P.O. for _____
* Please debit my Access/Barclaycard/American Express/Diners Card. Account no. _____
Please allow twenty-one days for delivery. *Credit Card orders can be telephoned to (05363) 61587/8.

A Commodore Appointed VIC Dealer. Please make remittances payable to Computer Supermarket Readers Account.

THE GALAXY 1 COMPUTER

The cost effective solution to your computer needs for only

£1,450*

The Galaxy 1 desk top computer system can be used in education, small business applications, word processing, stock control and a host of other environments. Our choice of CP/M as the operating system means that our customers can select a suitable application package from the widest possible range.

However, unlike our competitors, we supply not only the hardware but all the essential system software needed to start using the Galaxy 1 as soon as it is installed. We have adopted COMAL-80 as our standard language. This structured basic is rapidly gaining widespread acceptance and popularity especially in the education market, offering much greater flexibility and ease of use than existing Basics. We also supply a very powerful Z80 assembler/editor called GEM ZAP with GEM PEN, a compact but very powerful word processing package. The system software suite is completed with GEM DEBUG, a useful machine code program de-bugging utility.

Modular design means reliability and ease of maintenance. Unlike many other manufacturers Gemini offer a full one year warranty (except Disc heads which are guaranteed for 3 months). Our distributors carry a full range of replacement boards thereby facilitating a quick, efficient and cost effective back up customer service.

Features include:

- Twin Z80 Processors
- 64K Dynamic RAM
- 800 K Disc Based Storage
- 80x25 Screen Format
- Dual Printer Interfaces
- Modular Design
- CP/M 2.2 Operating system
- COMAL-80 - Structured Basic
- Z80 Editor/Assembler
- Text Editor & Formatter
- Program De-Bugging Utility

Gemini Microcomputers

Oakfield Corner, Sycamore Road, Amersham, Bucks HP6 5EQ.

Above left: Japanese neatness inside. Above right: graphics symbols on front edges of keys. Below: controls and I/O ports at rear.

Long variable names are allowed — the manual doesn't specify an upper limit on their length — but only the first two characters are significant. Apart from Basic reserved words, one other variable name is reserved for system use, `TI$`, which references the internal clock: `TI$="123000"` sets the clock to 12 h 30 m 00 sec and the clock runs until power-off or reset. You can convert the MZ-80A into a very expensive digital clock by setting `TI$` and then running a small Basic program to print the time on the screen. Like the '80K, the MZ-80A has a set of 136 graphics characters available from the keyboard. A graphics key toggles the keyboard between alphanumerics and graphics modes and the cursor changes to reflect the mode chosen. Sharp has reduced the clutter of the '80K's keyboard by placing the shifted and unshifted graphics symbols on the front edges of the keys and this works reasonably well, although I did find myself peering around for the symbols I wanted as they're printed in an only slightly darker shade of beige than the colour of the keys themselves.

The graphics characters (plus cursor movement, home and screen clear) are incorporated in `PRINT` statements simply by entering "`PRINT`", hitting the graphics key, typing the required symbols and then getting back into alpha mode for the closing '"' at the end of the statement. As well as lines, hatchings and curves, the graphics symbols include little faces, a spaceship and electronics symbols. The MZ-80PG printer, an Epson in a smarter case, prints all the graphics symbols as well as the alphanumerics.

Pressing the reset button at the back of the case puts you back to the monitor. At first sight this seems a pretty disastrous move, implying that you have to re-load Basic — particularly frustrating if you had been debugging a program which you hadn't yet saved to cassette. However, as mentioned earlier, the monitor has a jump instruction; typing '`J1250`' warm-starts the Basic and you'll find your program still intact. The Basic can be cold-started by typing '`J1200`', but of course this wipes out your program.

Because the MZ-80A's hardware is virtually identical to that of the '80K, the machines are almost completely software compatible too. I say almost, because, although the Basics are virtually the same, there are minor differences: `POKEs` to the screen are the most irksome — the '80A's screen address is different and the `POKEs` need to be altered accordingly. I tried `LOADing` an MZ-80K tape to see what happened: it `LOADed` OK and I could even `LIST` it but it wouldn't run. The reason is that internally, the Basics are different — specifically, they use different 'tokens' (the internal representation of Basic reserved words) so that `PRINT` in the '80K program came out as '=' when `LISTed` on the 'A. This can be overcome with a translation tape, which turns 'K software into 'A software, or you can buy a copy of the MZ-80K's Basic and use this with your 'K programs on the 'A.

Disk Basic

The MZ-80A can be expanded with a single or twin 5¼in floppy disk, using the same units as the MZ-80B, which

hold 280 kbytes per disk.

Adding the disk drives turns the MZ-80A into a medium-cost, lower-end business machine and Sharp's disk Basic reflects this — it incorporates all the features of cassette Basic with additional facilities to operate the disks, including random access file handling. Interesting features here include `LOCK` and `UNLOCK` commands which protect specified files against writing, deletion and renaming. There's a `CHAIN` command to allow one program to call another and pass values to it through variables, and comprehensive error trapping which includes not only `ON ERROR GOTO`... but facilities for trapping both the error number and the line number on which the error occurred.

Facilities exist for `LOADing` and `SAVEing` from and to tape from disk Basic as well as reading and writing tape files; this is handy not only for transferring cassette Basic programs and files but also for making security copies if, like me, you have a vague unease about the reliability of floppy disks and therefore have backup paranoia in a big way. It is even possible to transfer the cassette Basic to disk.

I ran our standard Benchmarks on both cassette and disk Basics and recorded identical timings for both.

Documentation

The basic MZ-80K comes with a 225-page A4 manual which assumes you know nothing about Basic and proceeds to teach you, with plentiful demonstration programs and examples throughout. It also assumes you have a Japanese sense of humour — the text is for the most part well translated, clear and concise, but it is liberally sprinkled with all sorts of unusual cartoons, including one showing decidedly slant-eyed rabbits and foxes.

As far as I can remember, large sections of the manual are in fact identical to the MZ-80K's. Extra information has been added, however: there's a full source-code listing of the monitor, together with detailed notes on all its routines, and a long section on machine-code programming which positively encourages you to get to grips with the Z80 on its own ground. Unusually, Sharp also includes full circuit diagrams of the machine so the soldering-iron freaks will have equal ease in finding their way about the system.

You also get a box of tapes with the MZ-80A. Apart from the Basic tape, the set comprises a Basic tutorial, games, 'home finance' and 'education'. All, with the exception of a Space Invaders game, are in Basic and all seemed reasonable without being particularly exciting. One or two of the games were somewhat bizarre and the geography program on the education tape had a distinct leaning towards asking the capitals of obscure countries (can you name the capital of Togo?). But, generally speaking, all should prove entertaining and useful to the novice home owner, at whom they're clearly aimed, and examining the listings could prove instructive.

Documentation for the disk Basic is rather slimmer as it deals only with the features which aren't found in cassette Basic. The explanations are altogether more business-like and serious, with no cartoons, and there's a very long listing of a stock control program with detailed explanations (including flowcharts) to show how it works. Time didn't allow me to 'play' with this but it seemed a fairly good implementation and, as Sharp hopes to sell the disk-based system as a low-cost business machine, it will probably prove both useful and instructive to small businessmen who have the time, inclination and determination to write their own programs.

The printer and disk drives each have their own manuals, which simply cover all a user needs to know about the operation and care of these peripherals. The printer manual is a damn sight better than the manual which came with my (standard) Epson and even includes an assembler source code listing for driving the printer from a machine-code program.

Expansion

As I've already stated, there's nothing you can do to expand the system's RAM — 48k is what you get and 48k is what you'll have to live with.

With the expansion unit fitted, you can add a printer and disk drives by slotting in the appropriate interface cards. Sharp sells a single disk drive unit, but this is a relatively expensive way to go — the extra cost of the twin unit is low enough to make the single unit appeal only to the very hard-up and, in any case, juggling floppies with a single drive can be a most annoying process. Neither printer or disk drives match the MZ-80A's styling — both are painted silver and the twin disk unit is in fact the same as that used on the MZ-80B; the printer, while similar to the '80B's, is slightly different, I'm told.

On the software side, Pascal is promised and CP/M will probably be with us by the time you read this; this latter will give users access to a much

wider software base, provided they can find somebody who supplies CP/M software on Sharp format disks: my colleague Dick Pountain certainly has very great difficulty in obtaining software for his MZ80B. Given the high degree of software compatibility, it's likely that many software houses will quickly translate their MZ-80K software — applications as well as languages — to the '80A, so the '80A buyer will be in a much better position than the early MZ-80K owners, who really were on their own to start with.

Conclusions

I must state now that I was in some ways disappointed with the MZ-80A. I had expected a considerable upgrade from the '80K — goodness knows Sharp has certainly had enough time to do this — but what we have is, in essence, just a 're-skinned' machine with improvements which, although undoubtedly in the right direction, are really the sort of things which should have been done 18 months or so back as a half-way stage to bringing out a model with a much higher spec. We're now at the stage where it's possible to mass-produce a 64k, twin-disk CP/M micro with a good display and medium-resolution graphics for an end-user price of around £1000, including a useful selection of software, which means that machines such as the MZ-80A, sitting pricewise at the top of the home range and the bottom of the business range, should offer not only the full 64k of RAM but good quality graphics and colour too, at least as an option.

My feelings are that, provided you could have lived with its nasty keyboard, then yes, you should be kicking yourself for not buying one of the last MZ-80Ks — price is important in the UK and the MZ-80A, at its present price, does not offer particularly good value for money. In six months' time, though, the price will almost certainly have fallen.

With machines such as the BBC Computer and the new Sinclair appearing,

offering good graphics, colour, sound, etc, for much less money, it's difficult to see the MZ-80A appealing to many home/hobby computerists. At the lower end of the business market, a twin-disk system could appeal to the cost-conscious buyer; the 40-column screen is a decided limitation in some applications, particularly word processing, but would be sufficient for most general business use, as a demonstration stock control program shows.

Through this Benchtest I repeatedly found myself saying, 'If only . . .': If only Sharp had given it the graphics from the MZ-80B (and this should be possible while retaining MZ-80K compatibility); if only the screen had 80-column capacity; if only there was a colour option; if only the processor had been upgraded to 4 MHz . . . any one — and preferably all — of these would have made me a great deal more enthusiastic about the machine. As it is, I'm left wondering what Sharp's development people have been doing all this time . . .

System Software:	4k ROM-based monitor
Languages:	Basic (cassette & disk)

Matchstick Basic

Computing Using Basic — An Interactive Approach by Tonia Cope (Ellis H Horwood/John Wiley & Sons, £15.00 hardback, £5.90 paperback)

Matchstick men and women provide a humorous and useful guiding hand through *Computing Using Basic — An Interactive Approach* by Tonia Cope. There are many introductions to Basic; this is a good one, which is lifted out of the ordinary by Charles Beesley's matchstick people.

They are useful little creatures because they make comments that a teacher might make in prompting a student or answering a question. The drawings are liberally sprinkled through the text, which also provides a lively flavour to the whole concoction. The matchstick tutors overcome a common problem in language books, where chunks of coding following text can be a forbidding prospect for a reader. The drawings provide a helping hand.

Programs in the book were developed and tested on a Research Machine S380Z, using BASICSG Version 5.0. An appendix compares command formats for this Basic with ANSI Minimal Basic and other Basics (which says in places 'check your manual'). Like all books on Basic, the problem with dialectics tends to make it more appropriate for readers with access to the Basic used in the examples. Cope's clarity of writing and the attractive presentation of the material, however, makes this book of value to a wider audience than RML users, provided the reader has guidance on the variations of the Basic dialectic theme.

There are two sections in the book. The first describes the Basic language and the second looks at some applications. The language description follows a functional course, starting

with general introductory material. The functions covered follow the sequence: arrays and FOR loops; strings and things; printing; reading data; program control; functions and subroutines; graphics; filing; editing and miscellaneous commands. The applications looked at include random numbers; sorting; simulation and modelling; statistics; computer aided design; and controlling a mass spectrometer. Although matrices are not a part of the RML Basic used by Cope, an appendix on matrices is provided, using examples run on a Computer Technology Mod One mini.

All in all, this is a practical and attractive introduction which reflects the fact that Cope developed it after testing an earlier version by over 1000 people, from schoolchildren and students to businessmen and university professors. It is particularly recommended for classroom teaching where there is access to an RML 380Z.

Complex comms

Network Systems by Roshan Lal Sharma, Paulo J T de Sousa and Asok D Ingle (Van Nostrand Reinhold, £25.45)

The spread of computing is inexorably linked with the development of the new telecommunications networks. Whether it is a local area network of micros or national and international networks involving satellites, optical fibres and

microwaves, computers are being hooked together.

Understanding the concept of networks is easy but the details of networking and the jargon surrounding it is a whole technology of its own. If you want or need more than just a superficial knowledge of these nets, then *Network Systems* by three senior technologists from Rockwell International provides a good round-up of the main factors.

There are three sections dealing with modelling, analysis and design. The first section on modelling will probably be of most interest to someone wanting to find out more about networking without having to actually get involved in detailed analysis and design. In this context, 'modelling' is concerned with the structure of the network, how traffic flows within it and how to evaluate system performance. There are seven chapters in this section.

The first chapter provides a brief introduction to the concept of networks. The next discusses the various network topologies that have been used. A topology is the way in which various nodes in the network are interlinked — for example, as a ring or as a hierarchical organisation.

The next four chapters examine the concepts of traffic flow and network control; transmission and signalling; modelling, analysis and design; and system performance. The last chapter of the section provides a detailed look at some existing networks, including the gigantic 'Ma Bell' national telephone network in the US; computer services like the US Department of Defence Arpanet and the commercial Telenet and Tymnet services; and local networks like Ethernet.

The sections on network analysis and design are much more suitable for practitioners and get involved in a considerable amount of detail.

This book is not an easy read, although it is written clearly. It is a useful reference work and an aid in educational courses.

Taking a global view

The World Challenge by Jean Jacques Servan-Schreiber (William Collins, £9.95)

The World Challenge is a book to reckon with. It influenced French President Mitterand to establish centres for developing computer technology to meet human and social as well as commercial objectives. Its aim is nothing less than to show how Information Technology can transform world politics and economics. And the publicity hype is even greater than for *The Soul Of A New Machine* (reviewed above).

'Jean Jacques Servan-Schreiber has written the most important book of this decade,' says the publisher's puff. 'He confronts the most important crisis of our generation, analysing its roots and offering a challenging blueprint for our survival. . . ' proclaims the cover.

Whereas Tracy Kidder set out with modest aims which were subsequently overblown by the publicity machine, Servan-Schreiber started with an ambitious concept. For his global perspective and his writing style (at least in the English translation) he deserves unstinting praise. But he fails to fulfil the promise of his own ambition.

The oil crisis and the microelec-

tronics revolution are the twin pillars of Servan-Schreiber's argument that a fairer distribution of resources can take place between developed countries and the Third World.

Recent events have thrown into doubt his analysis of how the OPEC oil-producing countries will be able to use their power and wealth to force the West to make a massive transfer of technological knowhow, equipment and services to the Third World. The fall in the price of oil and OPEC's loss of prestige — even if it is only temporary — undermine the certainty of future events which Servan-Schreiber assumes. He writes as if OPEC's stranglehold on oil is invincible and does not even hint at the sudden turnaround this year.

Nevertheless, there is much to be learned from his analysis of why and how the Arabs first seized control of oil and now want to use oil as a bargaining counter to achieve wider ambitions.

Servan-Schreiber is a journalist and politician and he writes about politics like a journalist. Most of *The World Challenge* is written in compelling narrative form, like a romantic adventure novel of intrigue, power play, international diplomacy and the 'making of great events before your very eyes'.

He starts with a meeting of Arab oil ministers in Taif, Saudi Arabia, in 1980. Taif is near Mecca and is the place where Prophet Mohammed gathered a small group of followers which lead the advance of Islam. It was in Taif in 1980 that a report was prepared which Servan-Schreiber says marks a turning point in world affairs.

The Taif Report, he says, 'aims for a new alliance between the Arabs and the Third World against their traditional exploiters, the industrialised West. It is conceived as a warning, a challenge and finally a demand for a massive transfer of technology from the United States, Europe and Japan to the poor and needy. It is not just another wishful plea — for it is backed up by the most powerful of all new weapons: oil.'

The first 100 pages of this 300-page book are concerned with describing the events that led to Taif in terms of the Arabs' increasing control of oil prices and the shocks to the Western industrialised systems of sudden oil price rises.

He also looks at other developments in Third World countries, at the Suez crisis, the traumatic events following independence of the Belgian Congo in 1960 and attempts by the Third World to get a bigger share of world economic and industrial activity.

The spotlight is then turned on Japan. He graphically describes the Japanese attack on Pearl Harbour and the dropping of atomic bombs on Hiroshima and Nagasaki; key events of the Second World War which resulted in Japanese humiliation.

From the ruins of war, Japan rapidly grew from a poor Third World country to one of the leading industrial powers. Much of Japan's industrial success has been built on high technology developments, and Servan-Schreiber shows how Japan is now opening its technological knowhow to the Third World, while the West carries on regardless. I found this section particularly illuminating. Although he glosses over problems in Japanese society, Servan-Schreiber provides a sympathetic insight into the Japanese collective and individual psyche. He provides interesting — and rarely reported — background on recent Japanese moves to share its technological and industrial knowhow with other countries. Led by men like Toshiwa Doki, president of the Japanese Federation of industrialists, and backed by the government and a number of research reports, Japan is planning a new strategy. 'The Japanese industrial giants can no longer concentrate simply on expanding overseas and conquering foreign markets. They must become more closely integrated with the world,' explains Servan-Schreiber. In particular, Japan has started training programmes in countries like Singapore, Hong Kong, Korea and China.

The weakest part of *The World Challenge* is Servan-Schreiber's superficial and uncritical approach to the technology. He makes sweeping statements like 'Computerised systems will be capable of performing all nonhuman tasks on a planetary scale, and thus permitting, in fact demanding, the creative fulfilment of what is and always will be peculiar to man.'

He dismisses all fears that computerisation may cause unemployment: 'The larger the number of microprocessors, the greater the need for vast human contribution,' he comments. All doubts are cast to the wind: 'Computerisation is inevitable, irreversible and desirable. That is the only way for a society, a factory or a bank to survive.'

For a book that is supposed to be concerned about human and social values and the quality of life throughout the world, such an uncritical approach to the impact of information technology is disappointing, to say the least. There are enough books extolling the marvels of the technology. With the breadth of vision he displays elsewhere in the book, Servan-Schreiber should have been more concerned about the impact that the technology might make

on the nature of the societies around the world.

Nevertheless, *The World Challenge* is an important book because it provides perspective on the well-known theme of the microelectronics revolution. It places the chip in an international perspective and shows how oil and chips may make a potent mix.

Juice extraction

Computing Performance Evaluation — Tools and techniques for effective analysis (Van Nostrand Reinhold, £21.20)

Despite the falling price of computing, users must be concerned about squeezing as much juice as possible out of their investment. Over the years, a wide range of aids to determine exactly how a computer is performing have been developed. Once the data is available on performance, it becomes possible to determine a plan of how to tune the computing engine to get more mileage out of the system.

These tools and techniques, however, do not come free. Software and hardware tools and techniques that can best be exploited by skilled performance specialists can cost a lot of money. This probably places many of the tools and techniques discussed by Michael F. Morris and Paul F. Roth in *Computer Performance Evaluation* beyond the scope of most micro users.

Their book, however, is a practical introduction to a subject that should be of interest to anyone seriously involved in computing. It is written primarily for data processing managers of largish mini/mainframe installations. But small systems have a habit of growing into bigger ones and today's ZX81 freak might be tomorrow's top computer whizzkid.

Performance evaluation is a subject that can be easily shrouded in equations. Morris and Roth avoid this danger admirably, except in a couple of places where mathematics is inevitable. All examples are based on actual experiences.

They provide introductory material

to all the main methods of performance evaluation starting with the collection of basic 'accounting data' on how the system has operated, through software monitors and program optimisers to hardware monitor benchmarking, simulation and modelling.

In addition, this book supplies guidelines on how to manage evaluation projects, the type of staff to be used and exactly where and when particular techniques are most useful. It could well be valuable to students of computer sciences as an introduction to and overview of this important subject.

The magnificent 32-bit

The Soul of a New Machine by Tracy Kidder (Allen Lane £7.50)

'The First Great Classic of the Computer Age.' That's how the publisher immodestly advertises Tracy Kidder's *The Soul of a New Machine*, a fast-moving and valuable description of the human effort that went into making Data General's 32-bit mini.

Kidder's book may be a best seller (its unexpected success in the States provided the resources which fuelled a razzmatazz launch in the UK). It may be an excellent piece of fly-on-the-wall journalism. It may even be a brilliant attempt to explain computer engineering in lay language — but to call it a 'classic' is to devalue the word. A literary classic should be multi-dimensional. It should be subtle. It should explore hidden depths beneath the superficial skin.

Kidder is too busy reporting events in a way that rams home his own thesis to explore more than one dimension. His thesis is that computer engineering can be equated with the craftsmanship and achievement of architects and builders of cathedrals and bridges, furniture and steam engines.

He reports on Data General's Eagle team, lead by Tom West. (Eagle was

Data General's belated response to mini giant DEC's 32-bit VAX system.) The one dimension he describes brilliantly is the way in which West's team were motivated to complete their work. What he fails to do is to examine fully the context in which the Eagle team were working and those aspects which contradict his thesis. He also became too committed to West himself to explain fully the problems which his management style created.

These criticisms may seem unfair in view of Kidder's original aim. He is a journalist, who was given a unique opportunity to sit in through the design of a new computer. As a piece of journalistic reporting, *The Soul of a New Machine* cannot be faulted. Kidder is particularly impressive in the way he explains the technological jargon sufficiently to enable a non-computing expert to understand the essence of the creative design and exhausting bug searching. Having cracked the jargon problem decisively, he reveals the kernel of Eagle's development effort with the skill of a thriller writer. He turns it into a something like a *Magnificent Seven* or *Dirty Dozen*. Tom West is the leader who gathered the gang together.

The book starts with a chapter about West on a yacht in stormy seas entitled (surprise, surprise!) 'A Good Man In A Storm'. It sketches in the corporate background in which the Eagle project was initiated. Basically, Data General had made a cock-up in the 32-bit mini market, had rival teams working on similar projects and ended up by trying to make a 32-bit version of its old Eclipse range, although other more appealing designs had been worked on.

West then gets the gang together. Those working on the hardware were called the Hardy Boys and, with equal obviousness, those doing the microcode were called the Microkids. The book then follows the roller-coaster ups and downs that led, 18 months later, to the emergence of Eagle in its marketing garb, called the Eclipse MV/8000.

In addition to describing the work, Kidder provides sharp characterisations of some of the key figures, like West's right-hand man, Carl Alsing. At first sight, writes Kidder, Alsing looked like a 'typical engineer' who 'wears a white undershirt and a plastic pouch (known to some as "nerd pack") in his breast pocket, in order to keep his pens from soiling his clothes. An electronic calculator — used to be a slide rule — hangs like a ring of janitor's keys from his belt.'

Then, in a typical passage which combines sharp observation with a quick dip into a psychological nerd pack, Kidder says that Alsing is different from that first impression. 'About his hands, the way he folds them in his lap or puts them together under his chin, there is something delicate. . . I thought that I could see in him the lonely childhood behind him — he would have been the last boy picked in every school yard game, the one who threw out a ball like a girl. But Alsing is gregarious,' observes Kidder. Most of the Eagle team have a characteristic psychological nerd pack provided by Kidder — a liking for finding out how things work, some private hobbies and

pursuits, a desire to work on interesting projects and a frustration at the commercial and management constraints which they feel generally hamper their creative work.

Taken at its face value, Kidder's book is a success. It captures the atmosphere of the team's work and gets over the excitement of computing to a lay audience. Yet, because of its commercial success, much more is being claimed for it. That is why I think criticism should extend into the areas which Kidder failed to cover adequately.

Firstly, there is the problem of why West and his team were forced to work on a project which arose almost as an afterthought following failures of other attempts to catch up with DEC's VAX.

Data General was formed in 1968 by three engineers from DEC, including Edson de Castro, now the President. Like many other similar ventures in the States (such as Apple), the entrepreneurial spirit worked well in a small team. But as it grew, the entrepreneurs found it difficult to keep the same spirit going.

As Kidder explains, de Castro runs the company with charisma but a great deal of inconsistency. For such a good journalist, Kidder surprisingly fails to investigate how much of the problems hit by Data General at the time of Eagle (late 1970s) were caused by de Castro. He tends to explain it all away by saying that perhaps de Castro deliberately created rivalries between different teams and failed to give Eagle adequate resources as a deliberate ploy to get the best out of West and his team, in a shoot-out with their backs to the wall. Something more incisive would have been more illuminating on the nature of the computer industry.

The second main criticism is that he mentions but fails to develop a central issue when discussing computer engineering as a craft. At one point West says that the excitement of being an engineer is that it 'provides some notion of control that you can derive in a world full of confusion'. He also says he always wanted to build something 'larger than' himself. Kidder relates these feelings to those of architects who created cathedrals.

But cathedrals were built to last. Before Eagle was started it was out of date because VAX was already established in the market. Even if they had begun in sufficient time, there is an in-built knowledge that any particular computer is likely to become redundant soon.

At one point in the Eagle project, West comments, 'We're way beyond what any one person can do. It's too complex.' And in a private moment, he confesses that 'computers are irrelevant', because they are replaced by new models so quickly.

Kidder is really describing a dying breed, rather than the career of the future as some critics have claimed. As computer design becomes more complex, more automated and more quickly replaced, the craft engineer will be replaced by cogs in a design machine. It is this contradiction at the core of the process described by Kidder — the creative motivation of the engineer

GOTO 187

The RP1600

FLOWWRITER™

A Daisywheel Printer that thinks it's a computer !

The RICOH FLOWWRITER is the most intelligent Daisy Wheel printer on the world market. Equipped with an internal micro computer and a large memory it will intelligently handle all printing and word processing operations; hence relieving the host computer for simultaneous use.

The Flowriter is fully compatible with software written for any intelligent printer and is plug compatible with all popular hardware.

Standard Features

- Prints up to 60 characters in 1 second.
- Compatible with QUME SPRINT, DIABLO and NEC Spinwriter standard and enhanced word processing commands including graphics.
- Proportional spacing tables programmed internally.
- Automatic margin justification even with proportional spacing.
- 8K buffer under full program control.
- Auto bidirectional printing.
- Optimised auto logic seeking in both vertical and horizontal directions.
- Graphics capability down to 1/120".
- Three interfaces included internally: Centronics -IEEE 488 - RS232C.
- Detached keyboard option.
- External program mode, allows use of many more printwheels.
- Selectable international languages.

.....and ITS CHEAP!!

APTEC APPROPRIATE TECHNOLOGY LIMITED

2-4 Canfield Place London NW6 3BT Tel: 01 625 5575/5134 Telex 264538 SSE G

The RP1600 FLOWWRITER is only supplied by APTEC and their authorised dealers, backed by national and international service networks. The FLOWWRITER is designed and manufactured by APTEC UK.

OSBORNE 1

Dual floppy disk drives. Two 5¼" floppy disk drives provide 100,000 characters each of data storage, or about 60 pages of typed, doublespaced text.

Diskette storage. The floppy diskettes can be removed, providing infinite permanent information storage. Two compartments provide storage for up to 25 diskettes.

RS-232C Interface. Enables the OSBORNE 1 to connect with serial printers, or other devices using this popular industry-standard interface.

IEEE 488 Interface. Connects the OSBORNE 1 to the standard instrumentation bus, for data communication with test instruments.

Osborne 1.
It doesn't need a room of its own.
Or even a desk of its own.
With its optional battery pack, in fact, it doesn't need mains electricity for up to two hours.
It's – as you can see – portable.
Weighing under 24lb in its weatherproof case, it can be carried in one hand. Or in your car. Or tucked under an airline seat.
But its performance is equal to, often better than, small business computers several times as big and twice as expensive.
The Osborne 1 will achieve in seconds commercial, engineering, or scientific calculations which, without a computer, would take days.
And store a whole library of data for instant retrieval and use any time.

Connected to a printer, it will operate as a word processor and produce letters, documents, reports – anything you want word- (and figure-) perfect.

And carry out financial planning, too, using an electronic spreadsheet, providing fast, accurate cash flow forecasts and instant answers to those important 'what if' questions.

You can see an Osborne 1 – and try it out – at any of the dealers listed below.

And then happily walk away with it.

For £1,250* the only personal business computer

*excluding VAT.

See the Osborne 1 at any of these authorised dealers:

OSBORNE 1

TM

Internal electronics. Z80A™ CPU, 64K bytes RAM memory (60K available to the programmer, 4K used to run the screen.) System software is held in ROM in a separate address space.

Screen. Clear, 5", 24-row screen displays a 52-character window on a 128-character line with automatic horizontal scrolling.

Monitor Interface. Connects the OSBORNE 1 to any monitor screen.

Keyboard. A standard typewriter keyboard plus numeric, adding-machine keypad for fast entry, and cursor control keys for easy cursor movement.

Case. The plastic case snaps together to form a weatherproof, 24-pound package that fits underneath the standard airline seat.

Standard software

Five outstanding software packages, with a retail value of over £800 are included:

- CP/M® Operating System
- WORDSTAR® with MAIL MERGE®
- SUPERCALC™ ● MBASIC®
- CBASIC®

Optional extras

- Modem cable for use with acoustic couplers for telephone transmission of data
- Battery pack
- Double density disk drives with 200K bytes of storage per drive

Trademarks: SUPERCALC: Sorcim Corporation; Z80A: Zilog Corporation.
Registered Trademarks: OSBORNE 1: Osborne Computer Corporation; CP/M Digital Research; WORDSTAR, MAILMERGE: MicroPro International; MBASIC: Microsoft; CBASIC: Compiler Systems, Inc.

7th West Coast Computer Faire

Several British companies took stands at the Faire. Manning one of them was David Tebbutt, who presents this exhibitor's eye view.

Something like 40,000 souls risked the spring sunshine and the possibility of an earthquake to attend this year's West Coast Faire in San Francisco.

Compared to previous shows, there was less of a revolutionary air about the event — it reflected more of an evolution from what had gone before. Fortune systems weighed in with its 32-bit machine, Osborne clones appeared and four British companies bagged themselves stands (or 'booths' as the Americans call them). The IBM machine has spawned a whole sub-industry of magazines, hardware add-ons and software products since the last show when the IBM Personal Computer was only a very faint rumour.

In previous years I have visited the show as a reporter and have managed to visit every square inch, as well as getting to one or two conference sessions. This year my viewpoint has been that of an exhibitor tethered to his stand about 80 percent of the time. Of course, outside show hours there was the usual round of 'receptions' (ie, booze-ups) and visits to local companies. From this I offer my impressions. I leave it to my colleagues, Guy Kewney and Chris Horseman, to fill in the details.

Let's start off with the British contingent — The Last One, Supersoft, Microfocus and Caxton. The TLO booth was full of posters containing quotes from its extensive press coverage. In the corner of the booth was a large screen projector which wasn't working when I passed by. I assume it was demonstrating The Last One in operation. The booth was organised and manned by the American end of the TLO Organisation, Krown Enterprises.

Supersoft from Eastcote was there, too, showing off its excellent, low cost high resolution graphics board for the Commodore PET. It was also showing its Microscript word processor, again for the PET.

MicroFocus was there again this year with its well entrenched CIS Cobol, FORMS-2 and the Animator, which displays lines of Cobol code as they are being executed.

Finally my own company, Caxton, attended with its first two products, Optimiser and Cardbox. Optimiser is an easy to use planning aid which uses linear programming techniques, while Cardbox looks like an enormous electronic card index filing system.

As well as the four booths, two Brits also gave forth at the conference. David Ferris chaired a session on packaged

Crowds queue to see the Faire

Otrona's neat portable

Durango's desk-top micro

software, while Metrotech's Graham Hawker gave a session on Prestel. Incidentally, Metrotech can supply a very nice line in private viewdata networks. Contact Graham on Uxbridge 58111.

Just after Graham finished his talk he was approached by an American woman who described herself as a 'microcomputer consultant'. She asked Graham who in the UK might be prepared to pay her fare to come over to give a talk. Graham hummed and hahed and in the end he had to confess he couldn't help. Out of curiosity Graham asked her how deeply into CP/M she was. 'What's CP/M?' was the reply!

For me the star of the show (apart from Caxton, of course) was the Otrona Attache. It occupies less than a cubic foot of space and into this manages to pack two high capacity (380k each) disk drives, a full 80-column screen with graphics and all the necessary workings to make it go. The machine is pretty as a picture and would look good on anyone's desk. It comes with some software packages included in the price — CP/M, Wordstar Plus, Basic-80, Valet and Charton. Valet allows you to inter-

rupt whatever you're doing while you perform another task. Charton is a plotting package which takes advantage of the 320 x 240 point display. The reason it won't wipe the floor with Osborne is because the price is more than twice that of the Osborne 1. Further details can be obtained from the Otrona Corporation at 4755 Walnut Street, Boulder, Colorado 80311; tel (303) 444 8100.

Somebody whispered that an Osborne clone was lurking down by the concession area. Further investigation uncovered the Kaycomp II, which looked remarkably similar to the Osborne prototype shown at last year's Faire. Unlike the Osborne, this machine boasts a 9in 80-column screen and vertically mounted disk drives. It is on sale at exactly the same price as the Osborne, and includes CP/M, a word processor, a high level language (Basic, presumably), a spreadsheet program and a mathematical program. All these descriptions are fairly vague in the supplied literature. Further details are available from meter manufacturers Non Linear Systems Inc, 533 Stevens

O FOR AN OSBORNE!

THE INCREDIBLE
OSBORNE I - A BEST BUY
FROM O COMPUTERS.

LOOK WHAT YOU GET FOR £1,250+VAT

THE HARDWARE

- * 4MHz Z80A Processor, 64K RAM
- * 2 floppy disc drives (90K)
- * 5 inch 52 column 24 line monitor
- * Professional keyboard plus numeric keypad
- * RS232C serial interface
- * IEEE 488 interface
- * Modem connection for communications
- * Plugs for external monitor or battery

THE SOFTWARE

- * CP/M Operating System and utilities
- * M BASIC interpreter for program-writing
- * C BASIC quasi compiled language with compiler & interpreter
- * WORDSTAR the best microcomputer word processing program
- * MAILMERGE for combining data files with word processed text
- * SUPERCALC an electronic spreadsheet for financial planning

Avenue, Solana Beach, CA 92075; tel (714) 755 1134.

Durango had some nice looking desktop machines on show. The most amazing thing about them was the quality of the dot matrix printer which could produce a wide range of fonts. With a bit of luck, PCW will have reproduced a sample somewhere in this report.

Adam Osborne was much in evidence at the show. He no longer makes awards, he collects them. *Infoworld* presented him with the world's first 'Floppy' award for the Osborne 1. The reasoning behind the name was if other professions can have Oscars and Grammys, why shouldn't we have Floppies? Why not indeed?

Adam took advantage of the show to pre-announce a couple of upcoming Osborne add-ons. An intelligent double-density disk drive option will be available at the end of April. As well as doubling the Osborne disk capacity, it will also be able to handle a number of other formats including the Xerox 820. The option will cost around \$185 in the US and will take a dealer about half an hour to install. The battery option will be available from mid-May. This will give up to an hour of power, sounding an alarm five minutes before the power runs out. This 'Portable Power' unit can be used when running off the mains or a car battery to give continuous power in the event of an interruption of the main supply. A charger is supplied with the unit and it takes something like 16 hours to recharge the batteries inside. Portable Power comes in a leather case and costs \$390 in the US.

The IBM machine has spawned a host of add-ons, magazines and software. The only surprising thing about this is the speed with which it has been done. There is a rumour, very faint and very distant, that IBM will launch in the UK at the end of the year. It is a rumour, I hasten to add.

An outfit called Xedex has come up with a Z-80 based peripheral card which allows IBM's Personal Computer to run normal CP/M programs. When not being used for this, it acts as an extra 64k of RAM. With the lovely name of Baby Blue CPU Plus, the card plugs directly into one of the PC's expansion slots. The software which drives Baby Blue is supplied on disk. It allows you to read several different format 5¼in soft sector disks and to write the CP/M program files in PC DOS disk format. While doing this, Baby Blue tricks a header into the program so that whenever it is loaded it wakes up Baby Blue's own Z80 processor, pops a small translator into BB's memory then transfers the CP/M program to BB. The program is then executed by BB for I/O calls which are passed back via the translator to PC DOS. When the program terminates, BB goes back to sleep and appears to be just another common or garden 64k RAM board.

BB costs \$600, unless you'd like Wordstar and MailMerge too, in which case it'll cost you \$980.

Further information can be obtained from Xedex Corporation, 645 Madison Avenue, New York, NY 10022; tel (212) 247 1400.

I mentioned Fortune Systems' 32-bitter. It's built around the Motorola MC 68000 and comes with between 128k and 1Mb of RAM plus 4-16k of

ROM. It can drive up to four 5¼in floppy disk drives (800k each, formatted) and up to four hard disks, either 5¼in or 8in.

Bell Labs' UNIX system is what makes this thing tick, so not surprisingly, you'll find it allows multi-user, multi-function operation. Plus, it offers a wide range of communications options.

The main languages offered are Basic, Cobol, Fortran, Pascal and C. The 32:16 allows local networking through the Ethernet system.

I could go on and tell you about the hi res (640x480) colour graphics or the business software available, but I won't. If you're interested, write to Fortune Systems Corporation, 150 Industrial Road, San Carlos, California 94070; tel (415) 595 8444.

Another hardware development which caught my eye was the 'modem on a chip'. Perhaps the rumours I have been hearing of a one-dollar built-in modem will come true. I suspect the dollar is the cost per unit in bulk manufacture rather than a retail figure.

Someone told me there is an 8088 add-on for the Apple which sounds mighty interesting. Graham Hawker also told me about a product which is a dealer's dream. It is called Teach/M and it is a software package which answers all the user's questions about CP/M.

The day following the Faire I found myself at the Machine Intelligence Corporation. This is a company set up a few years ago by some people from Stanford Research Institute. While I was there I was shown some interesting vision systems connected to robots which enabled them to 'see' silhouettes of objects and handle them appropriately. A new subsidiary of MIC, Symantek, is about to be created specifically to implement artificial intelligence applications on microcomputers. If the Editor will let me, I shall write an article about their work later on this year. For the moment the details of this work are a secret.

While 'Tebbo' was selling hard, newshound Guy Kewney was sniffing out new products.

All right, all you clever swots who know what software publishing is: answer this one. What is the largest software publishing organisation in the micro business?

Those who know their onions will start with a list of people such as Quality Software, Visicorp, Online Systems, Broderbund, and so on — all people who get programs submitted from ordinary users, and who then sell copies and pay the author a royalty.

Those who really know their onions will say that Visicorp, the company which used to be called Personal Software until its product Visicalc got more famous than the company itself since it turns over upwards of \$20 million a year, is the largest.

At the Faire, I made the interesting discovery that Apple itself now claims to have around \$40 million worth of software publishing business this year.

Certainly, on a subsequent visit to Cupertino, I found the offices absolutely crawling with outsiders who were claiming to be freelance programmers, and who were working in the Apple offices on their own products, turning them into Apple products.

It would, said one of these programmers in his laconic Californian drawl, be a much more impressive figure if one didn't have to contrast it with the number of programs that it could publish, actually owns rights to publish, but hasn't yet quite managed to organise.

The only bigger collection of freelance programmers than the bunch inside the Apple buildings', he said, 'is the bunch who used to be in, but who have stormed out in a rage because Apple can't organise their products onto the market — they don't even seem to know they've got them.'

A lot of people have been very sceptical (except they were Americans, so

they were skeptical) about the latest offspring of CP/M — something called 'concurrent' CP/M-86. This annoys me, because I thought it was the star of the Faire.

What it is to the user is the answer to all his prayers, if it works. It allows you to run several programs at once.

For example, you are typing away at your word processor and you find that you have to include a quotation for a customer. He has ordered 235 units at \$4.50 each, plus 345 units at \$2.99 each, plus two dozen at 14 Dmarks, half of each to be discounted at 24 percent and the rest to be discounted at 15 percent which makes them free of tax. . . in short, you need a calculator.

It just happens that your computer, if it were running Basic rather than your

word processor, could let you calculate all these things instantly. If you were running your invoicing program, you could not only use it to calculate all these numbers, but could create an invoice, and store it as a file.

At this point, the phone goes. It's the *Daily Snoot*, wanting to know turnover in Afghanistan this year compared with before the Russians moved in. You know the figures are somewhere in your CMS files, or maybe they were in dBase II. If only you could be sure — a DIR command would tell you what the filename was, but your wretched system won't do DIR while running the word processor... Under concurrent operating

and it has amply vindicated those sceptics who forecast that it would never work properly (they said nothing that sophisticated would ever work on an eight-bit Z80 or 8085 type micro). It had burned fingers — not just the users' but also Digital Research's fingers, in trying to improve it and make it work.

One day, maybe it will. In the meantime, however, people are nervous about anything that has the smell of MP/M about it. So naturally, they are wary of concurrent CP/M-86.

As I see it, the problems that bedevilled MP/M don't apply to this new system. Mainly, because although it may have four or five or whatever different programs 'running' at one time, they are in fact not running, but waiting. There is no chance that one program will try to read a record which another program is actively updating, because they can't work together — they take it in turns.

I hope I'm right! If I am, it will be a tremendous boon for the IBM Personal Computer — IBM was due to announce its availability as this piece went to press — and the Sirius One, where Chuck Peddle's company is negotiating to get the system from Digital Research.

On another stand a weird collection of rods was being waved around, pointing at an apple. Not an

more for hard disk drives in Britain, it comes as a bit of a shock to walk past something called 'Davong Systems' and see a hard disk for the IBM Personal Computer, costing \$2,000.

That was the price for the disk system installed in one of the holes where you normally find a floppy, with an interface, a controller, and software to let the system boot up from MSDOS, the new IBM operating system from Microsoft.

'We placed a \$2 million order with Tandon, the disk maker,' explained the company boss. It turns out that the price frightens even the Americans, but not because they think it's impossible — just that they think all hard disk prices will be down to that level soon. Tandon, Seagate and Shugart are fighting the price down, in the hope of encouraging a big market, it seems.

Davong says it is happy to supply to the UK, and is looking for a distributor. Details: 1061 Terra Bella Avenue, Mountain View, CA 94043 or phone (415) 965 7130.

If you were looking for help in choosing the best way of organising vast amounts of data on a micro, you would have done well to stay away from the most obvious source of help at the Faire — the seminar session on database.

All the big ones were there — dBase II, now best-seller outside the Apple world, MDBS, Access 80 (a new one, but impressive to experts), Selector V, Condor, and FM-80.

One by one, each product was 'described' by a senior executive from the company which either sold it or produced it. And, one by one, the audience either fought off sleep long enough to get out of the room, or yielded and went into a dull doze.

My conclusion at the end of the session was that none of the people who were speaking had the faintest idea of what their rivals could or couldn't do. They made little attempt to compare and contrast the abilities of their own database manager with others — instead, they recited a list of 'features'.

The trouble with a list of features is that it conveys nothing about whether the features are useful or not. Is a system with the ability to use five files better or worse than one with one file of infinity size and no restriction on record length? Why?

At the end, I came to the following tentative conclusions:

1. GBS from Quality Software is not available yet.
2. MDBS from Micro Data Base Systems is very powerful, but should be restricted only to programmers of considerable skill. The company says so, and I don't think they say so just to impress customers.
3. Access 80 may be very powerful at storing, and recalling, data you put into it. On the other hand, it may not be suitable for what you have in mind, and the literature, or the program itself, will never tell you anything to help you make up your mind.
4. dBase II is market leader. Some people like it.
5. If Condor is a good product, somebody ought to tell the people who sell it.
6. FMS-80 isn't a database manager, though it may well do more for you than a database manager can.

GOTO Page 185

Fortune's micro (above) and a general view of the Faire (below)

systems, you can run all these programs at once. Under concurrent CP/M-86, you press control and a number, and you get a fresh screen. On that screen, you can load and run a program. On the next empty screen, you load and run a third. You create your invoice, then switch back to Basic to check the arithmetic. It's okay, so you switch instantly back to the word processor, and call up the new invoice file. You read the figures right out of the invoice file, and merge the invoice and the standard 'pay in 30 days' letter.

The reason people haven't been jumping up and down enthusiastically is simple enough: concurrent CP/M-86 is based, mainly, on a program which is called MP/M.

That is a multi-user version of CP/M,

Apple, but an apple — green, crunchable, nourishing-looking.

The man behind it was pointing the end of his rods at the apple, and pressing buttons on his computer — and eventually it dawned on me that he was producing a three-dimensional picture of the fruit.

Each point where his apparatus touched the skin was connected to the nearest ones until a 'wire cage' around the surface was built up.

This magic trick, by Penguin Software, works for anything you can put on the plotter table. Mark Pelczarski, president, assured me he'd be delighted to have a UK distributor: contact him in Illinois at 830 Fourth Avenue, Geneva, Ill 60134.

When people are asking \$2,000 and

SINCLAIR ZX SPECTRUM

*Once again Sinclair offers value for money with a vengeance — colour, sound and graphics for £125!
David Tebbutt reports.*

Well, he's done it again, hasn't he? Uncle Clive has gone and shown the world how to produce a decent colour personal computer at the sort of price only he can conceive. Two versions of the Spectrum are available — 16k and 48k at £125 and £175 respectively, including VAT. If you want to upgrade your 16k machine to 48k later on, it will cost you £60. At the moment, the machines are available only by mail order. The Spectrum (ZX Spectrum to be precise) offers colour, high resolution graphics and sound and, at the price, it has just got to be the best value for money around.

Like most computers at this level, the Spectrum plugs into the domestic television and uses a normal cassette recorder. The ZX printer can be attached and, with a little modification, ZX81 programs will run happily on the Spectrum. A £50 miniature disk drive (the ZX Microdrive), communications facilities and an RS232 interface will be announced later on.

Hardware

The Spectrum measures just 233x144x30mm and weighs in at 520 grams excluding the separate power supply and cables. It looks extremely elegant and, unlike its predecessors, it has keys that actually press down.

You'll not be surprised to learn that there are hardly any components inside the machine: 14 chips, a UHF modulator, a piezo-electric 'speaker' and an assortment of capacitors, resistors, diodes, crystals and a coil make up the complement. I swear that some of my crystal sets had more in them. All this is mounted on a single board and, looking underneath this production prototype, I notice that there's not a single patch. The only odd thing about it is that there's a big blob of green plastiline stuck around the coil. The coil on the review machine does whistle a bit but I understand that production machines come with suitably lacquered coils to eliminate this problem.

A hefty edge connector at the back brings out just about every signal you could wish to have. This is used for printers, communications and disk drive connections. Inside there are two spare sockets which accommodate each end

of the 32k memory expansion board. This is a great improvement on the ZX81 memory expansion which tended to drop off the back of the machine at the least provocation. Talking of sockets (well I was, just now), every chip except the ULA is socketed. The reason the ULA isn't is because it gets darned hot — putting it on the PCB allows the heat to dissipate better.

The keyboard comprises a one-piece grey rubber moulding mounted over a pressure-sensitive membrane. The keys poke up through holes in a black metal plate and I must confess the feel is more that of a calculator than a typewriter. Most keytops have three symbols on them and, in addition, most of them have another two associated inscriptions printed on the metal surround. If you're anything like me you'll find yourself reading the whole keyboard each time you want to find a function. You do get used to it after a while: in my case it took a couple of days. I found that red symbols on grey keytops are quite difficult to read and, thinking my eyesight might be going, I showed the machine to a number of friends, all of whom had the same difficulty. I showed it to my 11-year-old and he thought it was just fine, though.

A power supply is included in the price, so there's not a lot of point risking one of your own and blowing the Spectrum up. The two cassette leads terminate in 3.5mm jack plugs so be sure that they work with your recorder before you embark on any major programs. It took me four or five tries before I found the right volume setting on my tape recorder. Once this was found, though, program loading presented no problems.

I tried the Spectrum on three televisions and the results matched the quality of the sets used. The display comprises 24 lines of 32 characters with the bottom two lines reserved for messages and entries. The display can also be regarded as 176 x 256 resolution for graphics work. High resolution graphics work is best done in two colours as you will see in the Firmware section of this review. The screen, border and individual characters can each take on one of eight colours and, in addition to this, characters can be bright or flashing. Other screen attributes

like inverse and overprinting relate to the whole screen. More on these later.

The single channel BEEP facility is about what you'd expect from a piezo-electric speaker. It does sound slightly better amplified from the cassette port but it's still pretty awful. A couple of octaves around middle C aren't bad; but the other eight are best used for sound effects. At the high end they warble and at the low end they grate — BEEP is a refreshingly honest description.

Really, there's not a lot more to say about the hardware. It is a very professional job; looks smart, works well and manages to squeeze 191 legends on to just 40 keys!

Firmware

Here's a new section for PCW Benchtests. All the software on the review machine was in the ROM chip which also contained the character set. This time Sinclair has gone for a basic ASCII set (upper and lower case) with the addition of both built-in and user-defined graphics characters. Outside of the range SPACE to QUOTES (32 to 126), many of the codes have special values relating to Spectrum keys and functions. For example, you'll find a copyright symbol key. (Now why didn't anyone else think of that?) You can define up to 21 characters of your own.

Two screen tables are maintained in memory — one for the displayed characters themselves and the other for the attributes which describe how they're to be displayed. These attributes can be tested from within a Basic program. The character colour is referred to as INK while the background colour is called PAPER. Isn't that sensible? Each character can have its own value for INK, PAPER, FLASHING, BRIGHTNESS, INVERSE and OVER. The last two should be explained: INVERSE simply means that the dots which form the character are printed in the PAPER colour while the PAPER is printed in the INK colour. OVER is special: it allows you to merge a new character with the one already at the screen position. The rules are that two INKs or two PAPERS print PAPER otherwise it prints INK. This means that you have a neat way of removing the last thing

Sinclair ZX81 Personal Computer the heart of a system that grows with you.

1980 saw a genuine breakthrough – the Sinclair ZX80, world's first complete personal computer for under £100. Not surprisingly, over 50,000 were sold.

In March 1981, the Sinclair lead increased dramatically. For just £69.95 the Sinclair ZX81 offers even more advanced facilities at an even lower price. Initially, even we were surprised by the demand – over 50,000 in the first 3 months!

Today, the Sinclair ZX81 is the heart of a computer system. You can add 16-times more memory with the ZX RAM pack. The ZX Printer offers an unbeatable combination of performance and price. And the ZX Software library is growing every day.

Lower price: higher capability

With the ZX81, it's still very simple to teach yourself computing, but the ZX81 packs even greater working capability than the ZX80.

It uses the same micro-processor, but incorporates a new, more powerful 8K BASIC ROM – the 'trained intelligence' of the computer. This chip works in decimals, handles logs and trig, allows you to plot graphs, and builds up animated displays.

And the ZX81 incorporates other operation refinements – the facility to load and save named programs on cassette, for example, and to drive the new ZX Printer.

New BASIC manual

Every ZX81 comes with a comprehensive, specially-written manual – a complete course in BASIC programming, from first principles to complex programs.

Kit: £49.⁹⁵

Higher specification, lower price – how's it done?

Quite simply, by design. The ZX80 reduced the chips in a working computer from 40 or so, to 21. The ZX81 reduces the 21 to 4!

The secret lies in a totally new master chip. Designed by Sinclair and custom-built in Britain, this unique chip replaces 18 chips from the ZX80!

New, improved specification

- Z80A micro-processor – new faster version of the famous Z80 chip, widely recognised as the best ever made.
- Unique 'one-touch' key word entry: the ZX81 eliminates a great deal of tiresome typing. Key words (RUN, LIST, PRINT, etc.) have their own single-key entry.
- Unique syntax-check and report codes identify programming errors immediately.
- Full range of mathematical and scientific functions accurate to eight decimal places.
- Graph-drawing and animated-display facilities.
- Multi-dimensional string and numerical arrays.
- Up to 26 FOR/NEXT loops.
- Randomise function – useful for games as well as serious applications.
- Cassette LOAD and SAVE with named programs.
- 1K-byte RAM expandable to 16K bytes with Sinclair RAM pack.
- Able to drive the new Sinclair printer.
- Advanced 4-chip design: micro-processor, ROM, RAM, plus master chip – unique, custom-built chip replacing 18 ZX80 chips.

Built: £69.⁹⁵

Kit or built – it's up to you!

You'll be surprised how easy the ZX81 kit is to build: just four chips to assemble (plus, of course the other discrete components) – a few hours' work with a fine-tipped soldering iron. And you may already have a suitable mains adaptor – 700 mA at 9 V DC nominal unregulated (supplied with built version).

Kit and built versions come complete with all leads to connect to your TV (colour or black and white) and cassette recorder.

iter-

Available now- the ZX Printer for only £59.⁹⁵

Designed exclusively for use with the ZX81 (and ZX80 with 8K BASIC ROM), the printer offers full alpha-numerics and highly sophisticated graphics.

A special feature is COPY, which prints out exactly what is on the whole TV screen without the need for further instructions.

At last you can have a hard copy of your program listings – particularly useful when writing or editing programs.

And of course you can print out your results for permanent records or sending to a friend.

Printing speed is 50 characters per second, with 32 characters per line and 9 lines per vertical inch.

The ZX Printer connects to the rear of your computer – using a stackable connector so you can plug in a RAM pack as well. A roll of paper (65 ft long x 4 in wide) is supplied, along with full instructions.

16K-byte RAM pack for massive add-on memory.

Designed as a complete module to fit your Sinclair ZX80 or ZX81, the RAM pack simply plugs into the existing expansion port at the rear of the computer to multiply your data/program storage by 16!

Use it for long and complex programs or as a personal database. Yet it costs as little as half the price of competitive additional memory.

With the RAM pack, you can also run some of the more sophisticated ZX Software – the Business & Household management systems for example.

How to order your ZX81

BY PHONE – Access, Barclaycard or Trustcard holders can call

01-200 0200 for personal attention 24 hours a day, every day.

BY FREEPOST – use the no-stamp-needed coupon below. You can pay

by cheque, postal order, Access, Barclaycard or Trustcard.

EITHER WAY – please allow up to 28 days for delivery. And there's a 14-day money-back option. We want you to be satisfied beyond doubt – and we have no doubt that you will be.

To: Sinclair Research, FREEPOST, Camberley, Surrey, GU15 3BR.

North Star's ADVANTAGE is easy to see.

The best value in microcomputing.

The North Star ADVANTAGE is the perfect low cost micro-computer for business or personal use. With 720Kb of floppy disk storage, or an optional 5Mb Winchester disk, the North Star ADVANTAGE offers the most memory in its price/performance class. And it comes with advanced business graphics software at no extra cost. You can look everywhere, but you won't find a better micro-computer for the money.

High performance computing and high performance software.

The North Star ADVANTAGE system offers high speed computing based on the Zilog Z80A® microprocessor, the most accepted 8-bit microprocessor in the world, plus an Intel 8035 auxiliary processor. 64Kb of RAM main memory delivers fast program execution, with an additional 20Kb of RAM for the graphic display. North Star provides graphics software com-

patible with CP/M® and HDOS operating systems and application packages, and most standard languages. There are thousands of CP/M compatible software programs available throughout the world. Or you can choose any of the North Star applica-

packages available for word processing, financial analysis, accounting and data base management.

Graphic displays for every need.

The free North Star ADVANTAGE BUSIGRAPH™ package makes it possible to generate line, bar, pie, and 3-dimensional charts, plus complex 3-dimensional forms. Reports can be transformed into impressive hard copy graphic displays in a matter of seconds.

Build a network of ADVANTAGES.

One North Star ADVANTAGE computer can be linked to other North Star ADVANTAGES by twisted pair cable using North Star's new network inter-

face and software package. This allows you to have a low cost network of individual systems sharing the more expensive peripherals.

This can be the first step toward fully automating an entire office or department.

Convenient design and service.

The North Star ADVANTAGE is a fully integrated micro-computer in an attractive, integrated enclosure. It provides high reliability and excellent operator comfort, plus straightforward servicing. For more information about the North Star ADVANTAGE, contact...

SINCLAIR ZX SPECTRUM

printed and restoring what was there before it.

By now you have probably realised why it is best to stick to two colours when doing graphics work. Since the colour of the INK and PAPER relates to a whole character position, then each time a new colour graphics point is set, all other set points within the boundary of that character are set to the new colour. This makes for a very curious effect to say the least.

Mathematical accuracy is to 9½ decimal digits and a fairly full range of mathematical functions is accessible from the keyboard. While on the subject of keyboards, this one has a built-in software 'click', an upper-case lock key and automatically repeating keys. Like the ZX80 and ZX81 before it, the Spectrum makes great use of single stroke keyword entries. In fact, I think every standard function and command is obtainable in this way. You'll even find things like \geq and \leq occupying their own pieces of grey rubber.

Basic

The Spectrum comes with a very useful version of Basic. It will be quite familiar to anyone who is used to the Microsoft types of Basic and a doddle to learn for those new to the language.

Rather than go through all the features and functions of the language, I have summarised them in a separate box. Here, I'll just comment on the unusual and interesting aspects of this particular implementation. Unlike some Basics, it is a teeny bit strict about things like using LET before assigning a value to a variable name or putting GOTO after a THEN. My view is that this is all jolly good discipline and it is more than compensated for by the fact that Spectrum pops in all those spaces which make programs so much easier to read. Of course, once you've found your way round the keyboard, the single stroke keyword entry is a joy. (I've got a feeling I said that in my last two ZX reviews.)

SAVEing and LOADING cassette tapes gives plenty of scope on this machine. You can save a program normally, you can save it so that execution starts automatically when it is reloaded, you can save arrays, you can save particular chunks of memory and if you want to keep a pretty picture you've created then you can use the SCREEN\$ option to save that too. All saved programs can be verified after saving. The screen save can't be verified because the display is changed during the verify program and it would not then match that held on tape. The LOAD command can, of course, handle any tape created by SAVE. The MERGE command allows you to merge a program on tape with one already in memory. Program lines which are duplicated are overwritten while all others are suitably interleaved.

The graphics facilities are great fun. You can draw straight lines, curves and circles on the 176x256 pixel (PIcture ELeMent, or dot) window. Position 0,0

What about the '81?

It was no secret that 'Uncle' Clive was going to launch a knockout micro — he's put a bomb under the industry twice already, producing machines which brought computing power within everybody's reach at prices which drastically undercut the competition.

A slightly upmarket (by Sinclair standards) machine offering colour and sound and reasonable graphics at a price far, far below that of any equivalent machine was a logical step to take, especially in view of Sinclair's obvious annoyance at being left out of the BBC deal.

What is interesting, though, is that the Spectrum does not replace the ZX81, as the 81 did the 80 — it's an addition to the range and the ZX81 will continue in production. In fact, production of the 81 is to be increased to a target of 150,000 a month by the end of the year.

'The ZX81 will continue to be ideal for the person who wants the lowest possible entry cost into computing,' says Sinclair. And to prove the point, he's knocked £20 off the price of the 16k RAM pack.

At the moment Spectrum is available only by mail order and is only on sale in the UK — there are no plans yet to market it through retail outlets, as is done with the ZX81 through W H Smith, and export versions are not planned until the end of the year, with the USA being the first (and largest) market to get the new machine.

Peter Rodwell

is at the bottom left-hand corner of the screen. You can define up to 21 graphics characters of your own which is a superb feature if you're into writing your own Space Invader or Pack-Man games. I had a lot of fun drawing and animating little people on the screen. The nice thing is that you can do all this sort of thing without leaving Basic. A BIN (binary) notation has been introduced which allows you to define numbers as a series of 0s and 1s — just the ticket for designing funny characters. Each character comprises eight lines of eight points, so a succession of eight BIN numbers is all you need to define such a character. Another use for user-defined graphics is to squeeze some extra colours out of the machine. If you lay out the 64 pixels like a chess board and choose suitable INK and PAPER colours then you can get some interesting effects. Most of them will be awful but persevere — some will be good.

You won't be surprised to learn that line drawing and circle plotting are achieved using the DRAW and CIRCLE commands. A PLOT command allows you to plot single points. POINT enables you to find out whether a parti-

cular pixel is set. You always DRAW from where Spectrum thinks you are on the screen. For example, a command DRAW 10,10,pi would draw a semi-circle ending up 10 places to the right and 10 above the current position. A fraction of pi would provide a different arc while zero, or no third argument (DRAW 10, 10) would draw a straight line. The curve can be drawn on either side of the centre line by making the third argument a positive or negative number.

The CIRCLE command uses three arguments: x-axis, y-axis and radius. Remember, the OVER command can be used to erase something already drawn. I used this feature in conjunction with DRAW, PLOT and CIRCLE to create cartoon effects. OVER is also useful for embedding text in a drawing. When set on, the text merges with the existing lines in the drawing. When set off it prints the full 8x8 character, completely replacing anything already displayed at that position. Incidentally, SCREEN\$ can be used to return details of the contents of a character position. Used in conjunction with the PRINT AT command, this could be a good way of

SINCLAIR ZX SPECTRUM

making your program find a suitable place to print a sort of 'label' on a drawing. The AT allows you to define the row and column at which printing should start.

A few instructions I particularly noticed as I went through the manual were READ, DATA, RESTORE and VAL\$. READ and DATA are old friends although I can't remember them being on previous ZX machines. Using the DATA command you can provide lists of information at the beginning of a program. Each READ instruction takes the next word from this list. RESTORE can be used to set the DATA pointer to any DATA statement. VAL\$ baffles me — it strips the outside quotes from string expressions and returns the string value of the result. Perhaps some kind reader would care to suggest a worthwhile application for this feature.

Now let's have a look at our honestly named friend, BEEP. There's not a lot to tell, really, except that you can control both pitch and duration. Notes below middle C are represented by negative numbers, those above by positive. Twelve numbers make an octave. (If you look at a piano keyboard you'll find that there are seven white notes and five black notes per octave.) Middle C is zero. The duration is expressed in seconds or fractions of a second. As I mentioned earlier, the sound isn't brilliant but it has the saving grace of being fairly quiet (ComputerTowns please note). You can pick this sound up from the cassette ports if you so wish. I'd say these facilities are more likely to be used for sound effects than composing symphonies.

That's really all I have to say about the Basic. It is a very good implementation for a machine of this size. A PAINT instruction would have been nice to fill in graphics shapes, but I think it would look a bit weird in multi-colour mode with the colours changing at each character boundary. A routine to do this should be simple enough. I think the screen resolution is quite adequate for most personal users of the machine. In fact you can churn out some quite stunning effects using DRAW, PLOT, CIRCLE and the user-defined characters.

Before moving on to documentation, here's a list of the disk commands just to whet your appetite: CAT, CLOSE, DELETE, ERASE, FORMAT, MOVE, OPEN. CAT is probably short for Catalogue which lists the files on a disk. MOVE probably copies a file from one place to another. The others are self-explanatory.

Documentation

Two manuals come with the Spectrum — a thin but useful introduction for the complete novice and a thicker one which explains things in depth. A lot of effort has been put into this latter manual. It is professionally presented and easy to read. Unfortunately, I was given a photocopy of the final proofs and it contained no index and no table

of contents. I read the whole manual a couple of times before starting the review and I found it a real problem to find things that I knew were there somewhere. I must admit that the style wasn't to my liking; it's a little verbose and the individual chapters seem to lack structure. I also found the inevitable errors which might cause a beginner problems — things like a minus sign being printed instead of equals, for example. The manual certainly seems to cover everything, so if a table of contents and a comprehensive index are added you'll probably find it adequate. It's certainly an improvement on many manuals on the market.

Potential use

This is the first machine that I've reviewed since the Atari two summers ago that I would actually buy — in fact I will have probably ordered one by the time you read this. I would use it for fun, for fooling around with graphics and for programming in Z80 code. I would treat it as a hobby machine, a way of relaxing. My children have already become very interested in the graphics capability and I see this as a way of giving them a real understanding of mathematics. A Logo system on this at the right price would go down an absolute treat — if anyone out there thinks of doing it, I'd love to review it. Of course, there are those who want to learn to write programs. Once again, this is an excellent machine to cut your teeth on. I think that schools and homes have got to be the prime targets for Spectrum at the moment.

Later on when the disk drives appear, this may change. At a predicted £50 for a 100k drive, a lot of people who will have written the Spectrum off as a hobby machine will have to think again. Add to that a £20 combined RS232 and communications facility, and you could be talking about some very interesting and fairly sophisticated networks. At that stage, it becomes a very real prospect for schools looking for a fairly grown-up system, but one which can involve as many pupils as possible. At Sinclair's prices could we possibly be heading for the 'one on every desk' scenario painted by so many futurologists?

Until those disks arrive there is no great office potential for the Spectrum. Once they're on stream then it's probably just a question of appropriate software. Information management and Visicalc-type applications would seem to be the most likely and, because of the price of the television, they will probably be used with portable black and white machines. No doubt the dedicated will take their Spectrums (or is it Spectri?) home to plug into the colour TV. Most people will probably wait until Sinclair announces a flat screen colour television. The network

idea could then be useful in offices for things like telephone directories, noticeboards and memos.

Prices (inc VAT)

16k Spectrum	£125
48k Spectrum	£175
32k Memory	£60
Microdrive disk	(estimated) £50
RS232 + Comms	(estimated) £20
ZX Printer	£59.95

Conclusions

Well, for the benefit of those who only read the first and last paragraphs of these reviews here are my conclusions: Clive Sinclair has produced a very good 16k personal computer which offers colour, high resolution graphics and limited sound for just £125. That represents very good value for money provided that this is the sort of machine you want. It is ideal for people who want to learn about computing and have a lot of fun while they're doing it. Given the right sort of graphics-based educational software, it can bring people very pleasurable ways of learning subjects such as mathematics and geography. Once the games programs start to appear, a lot of people will use it just for that, although it does seem a bit of a waste.

Later on, the provision of disk drives and communications facilities will make it an even more serious contender for the school markets and it will begin to creep into businesses. When the flat screen television appears then I suspect that the business interest will rise because the price will be far more appropriate. Bulletin boards, memos, telephone directories, spreadsheet calculation and information management seem to be the most likely applications.

The 'proper' keyboard is a distinct improvement on its predecessors, but it still doesn't achieve — or try to achieve — the quality of an IBM. All the old regular Sinclair features are included — the single keyword entry and the automatic syntax checking as you enter each command, for example.

My verdict? The best value for money you can find today! **END**

I would like to thank John Mathieson of Sinclair Research for so patiently answering my questions.

SCREENPLAY

This month Dick Olney reviews

games for Commodore's VIC-20

Hardware

The VIC-20 is part of Commodore's marketing strategy of gearing its products to more specific markets and attempting to exorcise the spectre of the PET (CBM is, it seems, upset that this rather endearing brand name has become so integral to its 'corporate image'). It is very much a home machine, offering colour graphics and sound through a domestic TV (see Benchtest in September '81 PCW). To keep the price as low as possible, however, the basic machine carries only 3k of user RAM. This means that for most of the cassette-based games (ie, those not supplied by Commodore), you'll

need a 3k RAM expansion and even then the complexity and presentation (though not necessarily quality) of these programs is rather inhibited by the lack of space.

The configuration I used would cost £165 for the CPU unit, with an extra £40 for the cassette and £26 for the 3k RAM (ex VAT), making a total of £231 — though the same set-up with 16k RAM (as offered by most machines in this range) would cost you £270. Some of the games use a joystick costing £7.50 and the Pinball uses a pair of paddles.

The operating system on the VIC is refreshingly friendly, giving clear messages as to what it is doing when

loading in from cassette, which makes the machine very easy to use. Overall I have only two complaints regarding the hardware. Firstly, the lead going to the television could be a bit longer, though of course it would be easy to extend it yourself. The second criticism is rather more important and regards the ROM packs on which nearly all the Commodore games are supplied. The edge connector on these is very exposed and quite difficult to guide into the socket on the back of the CPU unit. This makes them highly susceptible to damage, particularly if they are to be handled by impatient children.

Game: Alien
Supplier: Commodore
Price: £19.95

Another descendent from the arcades, this game takes its general principles from a machine called 'Space Panic'

which I have always felt was rather understated. You are being hunted by aliens in a maze and the only way to destroy them is to dig a hole, wait until one falls in and then bury him. Space Panic showed a vertical section with several floors and the creatures would actually drop through the holes but in Alien you are given an aerial view and thus there is only one level. The enemy are quite fast but very dumb so they won't necessarily find you — but if your time runs out all hell breaks loose with hordes of super-fast aliens appearing from nowhere.

Movement can be controlled by either the keyboard or the joystick. Digging and filling, however, are initiated only through the keyboard (the 'A' and 'D' keys) so if you use the joystick you will find you need three

hands to operate the game properly (can this mean that Commodore plans to bring out an add-on limb interface?). I overcame the problem by grasping the joystick between my knees and I'm sure there are other possibilities! Despite a good response time and reasonable graphics Alien is not nearly as good as its predecessor but it still has a certain unique quality that makes it attractive.

Game: Canyon Fighter
Supplier: The VIC Centre
Price: £5.95

Another program loaded in two parts with the first setting up the graphics. This one seems to be widely based on the arcade game Scramble (last month's Arcade Ace). There is a slightly

different version on each side of the cassette, one using the joysticks and the other the keyboard. You guide a spaceship through a jagged (and in some places very narrow) ravine. The game has a vertical orientation so in fact you just move the ship left and right as it moves downwards at a steady rate. Your aim is to avoid crashing into the walls or asteroids and, if possible, to destroy enemy ships and fuel bases. As in Scramble, you have limited energy which is replenished only when you hit a fuel base. At the end of the game (when you are destroyed) your score and the amount of remaining energy are displayed. It is one player only with nine skill levels.

Unfortunately there are a number of design faults in this game which ruin what might otherwise be a lot of fun. Fairly frequently the game starts, only to be immediately terminated as your

ship materialises right next to the wall. Considering the rather poor control you have, the game gets far too difficult at higher skill levels and there is occasionally an impenetrable line of asteroids blocking your path. The only sound is when you fire or crash and the graphics are less than inspired. Having said all this I should hastily add that the game is fairly addictive — it just needs a bit of polishing up.

SCREENPLAY

Game: 3D Maze
Supplier: Hi-Tech
Price: £8.63

The name of this game is perhaps slightly misleading. One might be led to think that your task was to find your way around a three-dimensional maze but in fact — from a playing point of view — the maze in question quite definitely has a mere two dimensions. The 3D refers to the line perspective representations of the walls and entrances displayed while you are inside it. You can look at an overall map at any time, so the trick is to find a position compatible with the short range view you are given of the corridor. Movement and mapping are controlled by either the joystick or the keyboard. This must have been an interesting

graphics project but as a mind teaser it has severe limitations. I'm afraid the distributor's proud proclamation that 3D Maze provides 'hours of endless frustration' is highly exaggerated (though I'm not sure how inviting that sounds anyway!).

Value for money: **

Addictive quality: **

Game: Rat Race
Supplier: Commodore
Price: £19.95

gate a mouse through a maze; it is running from a group of deadly rats while attempting to eat 10 pieces of cheese. It is in most respects identical to an arcade game (whose name escapes me) which is based on racing cars and flags. In the latter there is an extra hazard of oil slicks, here replaced by stationary black cats. You are given a short-range view of the maze and also a small-scale plan showing just the relative positions of rats, cheese and your mouse. Your only defence against the rats is to lay a 'star screen' in their path which temporarily confuses them. This, however, uses up your time units and so must be used sparingly. The score value of the cheeses increments as you eat them and one of them doubles the value of any subsequent meals.

After completing a couple of runs you play one frame against the clock in which the rats remain stationary; after this the number of rats increases. You lose a life (you are given three) each time a rat catches you, you run out of time or if you run into a black cat. I used to thoroughly enjoy playing the original version of this game and Rat Race is no less attractive. It should particularly appeal to those afflicted with the recently isolated disease 'Puckman fever', now apparently reaching epidemic proportions in the USA.

Using either the joystick or the keyboard, your task in this game is to navi-

Game: Ski Run
Supplier: Rabbit Software
Price: £10

the program in two parts, and Ski Run is one of the many games which use this technique. The first part displays the playing instructions and sets up the graphics, while the second actually runs the game, of which there are three variations. It basically involves guiding a cleverly depicted skier down a mountain, avoiding snowdrifts, trees and flags. In Slalom and Giant Slalom, the idea is to ski between evenly spaced pairs of marker flags (in Giant Slalom the flags are more widely spaced) while downhill involves following a narrow fenced track. A skill level of one to nine determines the quantity and complexity of the hazards. The skier moves quite fast at a steady speed and you move it left or right using the 'A' and 'D' keys (there is one joystick option). If you manage

to complete the course, you are given a time for the run.

The graphics, though hardly complex, are remarkably effective — especially the sideways movement of the skier — as is the steady whooshing sound. Although Ski Run may not be particularly sophisticated, it is well designed and executed and is certainly worth looking at.

Game: Blitz (cassette)
Supplier: Commodore
Price: £4.99

There are a number of versions of this game around for various machines. The basic principles are extremely simple. The program builds a city (looking rather like New York) with 18 skyscrapers of various sizes (it changes in each game) and you use the space bar to bomb it from an airplane travelling across the top of the screen. The latter is gradually getting lower so you must destroy the buildings before you crash into the side of one. You can only have one bomb at a time on the screen and they drop quite slowly so you must be extremely selective about your targets. This game is much more difficult than one might think and demands

quite a high degree of skill. The presentation, graphics and sound effects are all impeccable and the give-away price makes Blitz a must for all VIC owners.

ingenious ...but lonely!

Buying your first Genie I microcomputer is just the start of a long and enthralling adventure, for it won't be long before you will want to expand your system with some of the wide range of peripherals which make up the complete Genie System.

Firstly there is the **Expansion Box,**

which immediately expands your Genie's capacity to 32K RAM, and up to 48K RAM if required. It can be connected to 4 disk drives, a printer, RS232 interface or S100 cards.

Then there is the

Printer,

a compact unit with 80 column, 5 x 7 matrix print-out, which connects to your Genie through the Expander, or via the Parallel Printer Interface.

The **Disk Drive**

gives you greater storage capacity and full random access file handling, with the option of double-density through a special adapter. New Dual Disk Drive now available!

Finally, there is Genie's very own

12" Monitor,

a must if you want to let the rest of the family watch their T.V. in peace!

Available in B & W or green tube.

The supreme advantage of the Genie I system is its compatibility with the TRS 80, which means that literally 1000's of pre-recorded programs are already available, just waiting to be plugged into your Genie!

The recent improvements in the Genie system, including Extended Basic, sound unit and machine language monitor, make it the ideal system for the committed hobbyist, and an excellent and easy-to-use educational tool.

SPECIAL TECHNICAL GENIE

HOT - LINE ON 0629 4995

for all your technical advice and service back-up on any aspect of the Genie system direct from the experts!

Please send me FREE, 16 page colour brochure on the Genie Computer System. I enclose 25p postage.

First things first. Small business computer hardware or software - which comes first? At Peachtree we know that software has to come first.

It's all a very confusing business at the moment. The microcomputer is growing up, making computer power accessible to thousands of smaller businesses and to departments of larger organisations who couldn't justify it before. The trouble is, you are forced to choose a computer first (the hardware, like the tape recorder) and then find the programs (the software, like the music) to make it do what you want.

Peachtree has changed all that. There is no question now which comes first. It must be the software.

For the first time ever, the small computer user (like the large computer user) has the option of choosing a coherent, complete and comprehensive set of *business software products*, all from the same company, all designed to work together.

Peachtree Financial Management

Tools Nominal Ledger and Budgeting, Financial

Forecasting, Purchase Ledger, Sales Ledger, Inventory Management.

Peachtree Business Management Tools

Tools Sales Order Processing, Payroll Accounting, Name and Address Management.

Peachtree Office Management Tools

Tools Word Processing, Automatic Spelling Dictionary, Communications to other computers.

Until now either you, the user, or your computer supplier have had to cobble together a collection of products from different sources to meet some or all of these requirements.

Now - for the first time - your computer supplier can offer you the full set, (or the parts you need to start with) plus all the service you need, from one source.

This means that your software systems are easier to install and you get a quicker return on the investment you make in your computer.

It means that the systems all work

together, enabling you to get more out of your computer.

Because Peachtree software works on so many different types of computers it also means you're more likely to be able to take your application systems with you as you expand your use of computers in the future. You will be able to protect your investment in computer systems as you grow.

Until now microcomputer software has been a jungle. Now MSA, the world's largest company specialising entirely in business computer software products for large computers (nearly £40 million worldwide sales in 1981), has joined forces with PEACHTREE SOFTWARE, the world leader in these products for microcomputers.

Together we make an unbeatable combination. As a public company, MSA has the resources to *guarantee* you and your computer supplier support, both now and in the future. Peachtree software is supplied by computer manufacturers themselves, on a whole range of small computers - including the new IBM personal computer.

Now you can go and buy your computer. Ask for

Peachtree business software products in the confidence that you will receive skilled and professional advice in their use from your computer supplier, backed up by Peachtree

We work through local computer service companies because they are close to your office and your needs.

So, first things first: Send us the coupon or your business card or letterhead. We'll send you the name of your nearest supplier, along with a detailed description of Peachtree business software products and a full explanation of the importance of software. Or telephone Miss Susan Jane at Maidenhead (0628) 71011. Peachtree Software International, MSA House, 99 King Street, Maidenhead, Berkshire SL6 1YF.

First things first.

I'd like to know more about PEACHTREE business software products.

AN MSA COMPANY

Game: Invader Fall
Supplier: Hi-Tech Ltd
Price: £8.63

Based on Space Invaders, this is a simple, one-player game which

uses a joystick or the keyboard to move a traditional firing platform around the bottom of the screen. Instead of the usual marching formation, the invaders appear randomly at the top of the screen and move directly downwards. As might be expected, you are destroyed if any of them reach the bottom. The invaders themselves do not fire any missiles at you, although the occasional flying saucer makes up for this with highly accurate and rapid artillery.

One of the best features of this game is the series of bright colours which the invaders take on during their descent (the screen background is white). As with many of the VIC cassette-based games, the program is kept down to size by excluding common features of

presentation such as a running score or players' initials; you simply play the game and are told your score and how many shots you fired at the end of it. Despite this, Invader Fall combines traditional Space Invader playing concepts with its own unique qualities and a very reasonable price to create a fast moving and addictive game which is well worth the money.

Value for money: *****
Use of graphics: *****
Addictive quality: *****
Response Speed: *****

Game: Adventure Island, Pirate Cove, Mission Impossible, The Count, Voodoo Castle
Supplier: Commodore
Price: £19.95 each

This set of Scott Adams Adventure games is due out soon on Commodore's own ROM packs. The ones I was sent had apparently only just arrived in this country and were each held on a pair of

EPROMs (TI264s in fact) poking from the standard packaging. I can't claim to have fully completed any of them but I did have a good look at them all. Their format is completely standard with no concessions to the VIC's graphics capabilities except coloured text. All of them are imaginative and complex and should certainly provide hours of entertainment even for the most cunning adventurer. The price is a little high,

unfortunately, considering the single completion redundancy of such games; but if you can afford it, you'll not be disappointed.

Value for money: *****
Presentation: *****
Complexity: *****

Conclusion

Except for the memory restrictions I mentioned at the beginning, the Commodore VIC-20 has all the makings of a superb games-orientated home computer and this has been reflected in its popularity. The general quality of

the games is quite high and I was particularly impressed by the way some of the cassette software overcomes the lack of space. Commodore seems to be developing a very good selection of ROM packs, which is greatly enhanced by the introduction of the Adventure games. The graphics could be better,

but used properly they yield some good results. The price of this machine makes the VIC not only a strong contender in the home market but also a viable alternative to a non-programmable games console.

ARCADE ACE

Having so far concentrated on well-established classics the game I have chosen this month is rather more recent, although it already has a good following. It is called Frogger and is definitely in the Puckman rather than the Space Invaders genre. You control a small green frog using a joystick to move and a button to jump. It has to cross a road followed by a river in order to reach its home on the other side of the screen. The road is crowded with vehicles of various types which speed up as you work through the frames and must be negotiated using the joystick. Since the frog is unable to swim the river due to a stream of logs (and the odd crocodile), he must jump from log to log, taking care not to be swept away. As you progress other creatures appear presen-

ting further hazards.

I can't claim to be an expert at this, though the small boy who was playing when we took the photograph most certainly is. The graphics on Frogger are extremely good, however, with all sorts of nice touches which make it an interesting spectator sport. Timing is the essence of this game, which requires quick and careful planning if you're to avoid getting squashed. It may not be as hectic as a space battle but it demands just as much concentration. The concept behind Frogger is pretty sick in a harmless sort of way but the game itself is amusing and challenging.

END

FRAMES OF REFERENCE

A DP MANAGER'S GUIDE TO MICROS

By Alan Wood of Digitus Ltd.

It is easier to determine what microcomputers are not good for than it is to describe the numerous applications for which they are suited. Micros are not good for handling vast files of data, for handling many users simultaneously, or for handling huge number-crunching tasks. The practical hardware limits of today's micros are: 1 megabyte of RAM, 100 megabytes of disk store, eight users on a multi-user system or about 24 single users on a network.

The software limitations of micros are more significant than the hardware limits. The development of a multi-user or network operating system is not a trivial task; such software takes many years of talented design and programming to produce and many more years before it is largely debugged. Some of the offerings in the micro market are simply not credible, although there are excellent examples of software, eg, the Unix implementations and Xionics Xibus/Xinet. The software available on micros is lacking when it comes to organising and getting rapid access to data in large files. There are few languages and operating systems with even ISAM facilities and there are fewer database management systems.

It is important to get the limitations of microcomputers in perspective before you consider their application and place in your company. It is also helpful to start with a working definition of the operational differences between computers:

A mainframe is a computer which requires an operational department to run it.

A mini is a computer which requires an operations manager to look after it.

A micro is a computer which is operated by its user.

Microcomputers offer a number of benefits compared to their computing antecedents: rapid delivery... from one to four weeks; low entry cost... £6000 for a complete single user system that could grow to a 24-user network; fast implementation... complete small systems installed three months from order and no system installed in longer than six months; package abundance... low cost implementation and maintenance; physical size... micros pack more and more power into desktop units — yesterday's mini literally fits into today's desk.

The disadvantages of microcomputers in the hands of users can be described as:

1. Publicity greater than performance... microcomputers do not equal mainframe computers; the cost of a system does not equal the cost of the hardware — personal computers are good as super-calculators but not as file processors.

2. Users are not disciplined enough to have own computers... floppy disks get lost/disorganised, data backup is not taken regularly if at all, hardware is abused with dust, coffee and crumbs.

3. Hardware and software limitations not understood... a little knowledge leads to doing dangerous things, DP departments adopt a 'not invented here' attitude and refuse to get involved/help until the user is humbled by mistakes.

PART 6: PUTTING YOUR MICRO TO WORK

4. Surreptitious microcomputing... micros sneaked in by users, little, no or fallacious justification, self-indulgence in doing interesting things in computing (previously the prerogative of DP people only!).

Applications

In addition to familiar data processing tasks, the cost of micros justifies new applications which were previously uneconomic, impractical, or low on the priority list. Data processing departments have seriously underestimated the role of micros, associating them with game playing and trivial tasks. Microcomputers are extensively displacing and supplementing timesharing services with significant cost savings; they are replacing tasks previously undertaken on minis, much as minis usurped the position of the low-end mainframes; and they are pushing computing facilities further up and down organisation hierarchies... the first computer on the director's desk is often a micro.

The computer manufacturers of the '50s and '60s found an eager market in the commercial and industrial companies whose operation and expansion was inhibited by manual systems. The first systems they installed were a computer replication of what was there already. Then the systems became more

sophisticated, reflecting new services companies could offer, such as credit card facilities and airline reservations. The increasing complexity of those systems led in turn to bigger computers. At the same time, the individual manager's job grew in complexity to a point where computers were needed to aid decisions. The data needed for those decisions is not easily abstracted from traditional data processing systems in the format the manager needs. Consequently, the microcomputer manufacturers have found an eager market among professionals in large companies hungry for computer assistance. The microcomputer is excellent at handling the top layer of management information. It can be applied to taking a lateral view of data in a hierarchical data processing system. It can be applied to calculating and assembling data in a digestible form. In the hands of an intelligent user it functions as a brain-extender to help reduce costs, make better returns on investments, sharpen negotiations and provide 'considered' responses more quickly.

Personal and company systems

It is important to distinguish between the personal and the company system, between personal data and company data. Personal data can be defined as 'unique to an individual'; company data is 'integral to the company'. An engineer working on a project will have data unique to him on which calculations need to be performed. Similarly, scientists, managers, accountants and executives have unique data requirements. The needs of this group can be partially satisfied by a personal system which has some of the following characteristics: uses unique data; is applied as a super-calculator or electronic file index; encourages computer literacy; supplements/replaces time-sharing service; prepares for future electronic office; uses programs and packages which do not require central support.

One danger associated with personal systems is that managers will spend more time learning programming and playing with computers than managing. In practice, what is tending to happen is they put in extra hours in the evening and weekends and also encourage junior office personnel to become computer literate. A more significant danger is the creeping system: the simple personal system which creeps into a company system with all the dependencies that this implies but none of the essential standards or controls.

Company systems are, by definition not unique to an individual but integral

to a company. They develop as the company develops and they require control and support. If the company system's operator, manager or user leaves it is essential that the system can be passed on, understood and operated by his or her successor. Micro-based company systems are similar to traditional data processing systems, even if they are used like 'link-less' terminals. There are many examples of such systems. They lend themselves to company-developed packages which can be used at a number of sites: warehouse stock location, local stock recording, stock taking; 'specials' purchasing, goods receipt; personnel records, career/salary administration, graduate recruitment; depot, division, department, and branch record keeping; quotations, contracts, proposals and project administration.

Fertile areas for micros

The 'no-man's land' for microcomputers is between what users want and the border with existing mainframe systems. If you leave aside that territory, there are still acres of applications untouched by existing company systems. Two of the most rewarding areas are office systems and timesharing replacement, sometimes in combination.

The functions performed in offices up and down the country are basically similar. The typically comprise calculating, record keeping, typing and communicating via telephones and mail. These functions suit standard systems and packages because they are so alike.

The off-the-shelf microcomputer can perform most office functions using packages, with a few tailored programs to meet justified special needs. There is a variety of standard calculation aids, such as Visicalc and Supercalc. There is a choice of information managers from the simple electronic index, Visidex and Cardbox to the more detailed electronic file cabinet, Auto-Index, DataStar and DMS. Word processing packages abound, often in combination with record keeping (eg, WordStar/DataStar, Silicon Office) and with other facilities like spelling dictionaries (Spellguard, Spellstan). A feature of networked micros is the ability to send messages to other users of the network, such as Nestar and Xinet. Micros can also be used with acoustic couplers and modems to communicate messages over the public telephone system, so authors creating text on a home computer can send it down the line to the publishing house central machine.

The point has already been made about the limitation of the micro as a super number-cruncher. Timesharing services thrive on the software and databases they offer; they will continue but cursory analysis reveals that many of the smaller programs can be run on micros and many of the new micro packages offer a top cut off the timesharing service at a fraction of the cost.

The trend began with tools like Visicalc, a rows-and-columns program providing a matrix of 64 columns by 200 rows, automatic re-calculation facilities and a variety of mathematical formulae. Visicalc is much friendlier than timesharing programs which do not provide screen interaction. It has been followed

by a variety of other aids — Micro Modeller and Micro Finesse for financial modelling, Micro Pert and Micro-Planner for critical path applications, Optimiser for linear programming. More management aids and personal productivity programs will follow. The 16-bit desktop micros with these programs will eat further into timesharing spend. Using micros for front-end data entry is also an economic extension of your timesharing service, so that you keep connect costs and phone bills down. The added facilities that the micro provides off-line combined with use as a terminal are valid justification.

In some departments dedicated word processors are required, eg, updating from a typing to a word processing pool. In others, the general-purpose microcomputer with word processing software provides an economic and versatile solution. At today's prices, £5000 buys a high-quality micro with a daisywheel printer and word processing software. The software is not as friendly or as feature full as the specialist word-processors, but the fancy features for which those machines are bought are seldom used. Applications combining data processing, word processing, information processing and number processing are ideally satisfied by microcomputers. A small bonus (or hazard, depending on your point of view) is the extension of keyboard skills in the organisation and the dispersal of some typing to two-fingered word processing users.

Data processing on micros

It is in their application in data processing that microcomputers cause most agony, antipathy and indecision in larger companies. Just how far should you let them go or grow? The hardware and, particularly, the software limitations of micros automatically exclude them from many applications, although the boundaries are being pushed steadily outwards. The cost of converting software on existing systems is another natural boundary to micro encroachment. Then there is the preservation of computing skills and all those hard-learned standards and controls built up over the years. And superimposed on the top is the company organisation and computing policies. Is yours a heavily centralised organisation, with controls flowing outward from the centre? Or does your management favour operating in relatively autonomous groups with just top-level financial controls?

In the Big Brother company, the best micros to use are the first level personal computers, perhaps with mainframe communication. In the Little Brother company, there is a lot of scope for more powerful micros. The network of micros has a place in both centralised head offices and in dispersed organisations.

For the most part, ledger applications will be well taken care of and will be much too big for micros. However, some of the small business subsidiaries of big companies can fit quite nicely and quickly on to a microcomputer. Examples are overseas or remote small companies, companies acquired in a takeover, companies set up to market a new product of service. Another common application for micros in large

companies is executive payroll — often a tedious job for the company secretary or financial controller.

There's a whole variety of standard application packages for ledger applications so it should not be necessary to develop special software, other than a small number of tailored programs. Reputable suppliers include MicroProducts Software and Omicron.

The minicomputer made great headway as a machine dedicated to regional and branch order processing and stock control. The micro is equally successful for smaller order processing systems, as a single-user, or networked configuration. A number of big companies use micros for local stock control and repeat the same system in lots of locations, eg, Shell. There are a variety of order processing and stock control packages, eg, Omicron, MicroProducts, Paxton, Peachtree. Purchase order processing, particularly specials as opposed to bulk purchasing, is a common micro application in the larger company.

Teletype communications and 2780 and 3270 emulators provide the means of connecting microcomputers to mainframes. The other popular protocols are gradually appearing from computer manufacturers and from independent vendors. The availability of such software removes one of the main deterrents to DP applications on micros; the micro becomes simply an extension of the existing facilities. A microcomputer used locally for a variety of tasks can be switched to an intelligent terminal to talk to, and receive data from, the mainframe computer. As more protocol software becomes available, micros will be used to replace expensive emulation terminals. Suppliers of communication software include: Micro Integration with Bysync 2780, 3270, Lifeboat with RBTE, Winterhalter Associates also with 2780/3780 and 3270 emulators.

Multi-function applications

The microprocessor is overturning the traditional approach to multi-user, multi-tasking computers in a number of ways and providing new options in multi-function computing.

The mainframe and minicomputer solution to providing access for many users to an information facility has been to share central memory and store. A sophisticated operating system handles the management of many users and tasks, apportioning part of the memory and store to each task, handling queues of users and protecting files from corruption through simultaneous access by more than one user. Advanced multi-user computers partition and use virtual memory, allocate priorities and have extensive security and data management features, all of these house-keeping tasks consuming an increasing proportion of the power of the computer — for example, if you have an IBM environment you virtually need one machine to manage CICS and IMS and another machine to run your applications.

Multi-user and multi-tasking

There are two solid justifications for large computers for multi-user work.

FRAMES OF REFERENCE

The first is where a vast amount of data has to be stored and manipulated. The second is where many people must share data and have access to it at the same time; the classic example is airline reservation systems.

The justification of multi-tasking — the performance of many jobs simultaneously by one computer — is based more on economics than the need for big computers *per se*. Multi-tasking can still be justified where it is more economic to fulfil applications on one big machine, rather than on a series of small ones. If the applications are up and running, it may also be cheaper to keep them there because of software conversion costs. However, if the applications have not yet been implemented, or have to be updated, or the computer has to be changed, a series of machines performing one or more different tasks can provide a highly resilient, economic and responsive solution.

There are two simple examples of multiples of microcomputers being used to satisfy requirements economically and securely. Firstly, when the tasks become too many for one machine in an office, a second machine can be installed to meet the expanded requirement. Secondly, when the same jobs have to be repeated in different locations, the distributed microcomputer can be the ideal solution. Set up to produce quotations, keep stock, run an estate or personnel agent's office in one location, the microcomputer can be cloned for as many sites as is economically justified.

The essential characteristic of distributed micro systems is that users do not need simultaneous access to the same files. Transfer of floppy disks from one machine to another or telecommunications to a central point is sufficient to satisfy occasional sharing of information. Because we are used to thinking of traditional multi-user file sharing, we too often jump in that direction without examining the options sufficiently. Even micros stacked one on top of the other can provide more resilience and take up less space than one multi-tasking computer.

Where it is vital for a small number of users to share the same files, a multi-user microcomputer can be employed. On 8-bit single processor machines, the practical limit is about four terminals. The multi-user features are achieved in differing ways; for example, by switching from one bank of memory to another, dedicating memory to each attached terminal. On a bank-switching system, the users share disks and operating system. Speed of response depends on disk speeds, sophistication of operating system and the cleverness of the programmer. Hard disks are essential to provide adequate data storage and response and backup should be available by tape or exchangeable disk. More advanced 8-bit multi-user microcomputers provide several processors to support multiple users.

On 16-bit micros with Unix derivatives or own operating systems, the limit is 16 users and the typical load is 6-12. On these machines input/output is a greater limitation than processor

capacity since most typically operate with only one disk channel. They are well suited to multi-user information management and word processing tasks where all operators must share the same files but where transaction levels on individual records are not very high.

Where a lot of workstations, data storage and peripherals are needed, the trend is to go to local micro networks. There's a variety of systems available, of ascending capability, which at one end of the scale simply share storage media and at the other end enable users to connect micros-to-minis-to-word-processors-to-mainframes.

The Nestar shared resource system enables connection of a series of Apple computers to a central store of data or programs, thus extending store capacity whilst retaining a computer for each individual user. For example, in an accountant's office, each Apple user could be dedicated to his client's incomplete records processing. When the job was finished the accountant could call the 'group' time recording system on the 'shared' resource and log in the time taken on the job for central charging.

The DSC Hi-Net enables its users to connect 30 intelligent workstations at a series of nodes on the network. Attached devices can be microcomputers, 64k terminals or shared resources — eg, winchester disks and printers. Different activities can be conducted at different nodes on the network — eg, word processing, order processing, stock control. The operation is rather comparable to a multi-tasking computer, except that if one microcomputer on the network goes down the others continue to operate.

Xionics Xibus data management and Xinet networking systems come in the most powerful category of networking systems: those providing a highly resilient, general purpose resource to enable unification of the various computing and digital devices in a large organisation. For example, a Xibus/Xinet user in a company with IBM mainframes, DEC minis, Vydec word processors, Zilog microcomputers and Prestel Viewdata can call down on his workstation a mainframe or mini file, or send data to the micro and word processors and later read pages of Prestel — always provided he has the necessary security clearance and access code for those transactions.

Finally, there are both general-purpose and special-purpose computers being built around multiple micro processors, rather than on one processor, eg, the Triton 4 microcomputer with four processors and Xibus/Xinet with multiple processors. To improve resilience and efficiency and to capitalise on microprocessor costs, tomorrow's special and general-purpose machines are being built on a honeycomb of microprocessors, with each cell performing or duplicating a function, all intricately interconnected.

Existing computer users have a wide variety of options and constraints with regard to microcomputing. Should they: connect micros to mainframes?/use micros as 'linkless' terminals for remote tasks?/use micro networks?/or intercon-

nect micros with word processors, minis, mainframes? The new users also have many options; should they choose multiples of micros, a multi-user micro or a micro network to satisfy their needs? There is no absolute answer for either the existing or new user, other than selecting a reliable system at the bottom end of its capability so that it will grow with your needs. The key words are 'reliable' or 'proven' at the 'lower end' rather than at the extremities of what suppliers claim. These requirements limit choices and ease the process of selection, once the more difficult decision is made about what conceptually will suit present and future needs.

More radical thinking

So far we have taken a traditional approach to the new computing, carefully matching capabilities and limitations with possibilities and constraints. Some managers are more radical in their approach to take full advantage of powerful low-cost micros. Forget for the moment that you are constrained by years in DP and by all the computing paraphernalia your organisation has accumulated. Without those trappings, how would you proceed?

Starting at the baseline in your organisation, you could equip every worker from director to office administrator with a computer which would occasionally connect or feed into a central hub. Everywhere you see a typewriter or find a calculator, install a dumb terminal; everywhere there is a telephone, and a few more places besides, you could put in a micro. Connect them by cables and you have a computer utility. Connect your cable to existing minis, word processors and mainframes and you have closed the loop on existing computing. The technology, products and costs are such that radical-thinking managements are achieving or planning this computing scenario now.

The costs of personal computers are comparable to the costs of quality electric typewriters. A network of microcomputers providing calculating power also facilitates inter-office communication. An 'incompatibles' networking facility of the Xinet class enables you to connect your micros and liquorice allsorts of mainframes, minis, word processors and information services. The choice for the larger organisations lies between allowing a piecemeal approach or developing a rational architecture for the 80s which will fully employ new technologies linked to existing computing.

The sixth commandment of microcomputing

Thou shalt not treat micros as transaction processing machines. Micros are at their best as single-user or multi-function computers on which each user is processing a discrete task. Micros are ideally suited to office systems, time sharing replacement and intelligent workstation tasks. They are not suited to transaction processing where many users want to simultaneously access and update the same files and records — eg, order processing.

END

PCW SUBSET

Alan Tootill presents more useful assembler-language subroutines. This is your chance to help build a library of general-purpose routines, documented to the standards we have developed together in this series. You can contribute a Datasheet, improve or develop one already printed or translate the implementation of a good idea from one processor to another. PCW will pay for those contributions that achieve Datasheet status. Contributions (for any of the popular processors) should be sent to: Sub Set, PCW, 14 Rathbone Place, London W1P 1DE

Random numbers

There was a misprint in February's RANDM routine, leaving both the mnemonics and hex code incorrect. As luck would have it, J A Lewis of East Grinstead chose

this particular routine to try out on his home-made computer as his introduction to 'Sub Set'. He sent some suitable comments. Sorry J A! The code should have been:

```
RANDM: PUSH AF      ;save          F5
        PUSH BC      ;registers     C5
        PUSH HL      ;save original HL E5
        LD H,L        ;              65
        LD L,+10      ;HL← 256*HL+10 2E OA
        POP BC        ;BC← original HL C1
        OR A          ;clear carry   B7
        SBC HL,BC     ;HL← 255*HL+10  ED 42
        ADD HL,HL     ;HL← 510*HL+20   29
        ADD HL,HL     ;HL← 1020*HL+40  29
        SCF          ;prepare to add 1 37
        ADC HL,BC     ;HL← 1021*HL+41  ED 4A
        POP BC        ;restore       C1
        POP AF        ;registers     F1
        RET           ;return         C9
```

Another reader more charitably recognised the misprint and sent this improved

version of the code, two bytes shorter and 19 T-states quicker:

```
RANDM: PUSH AF      ;save          F5
        PUSH DE      ;registers     D5
        EX DE,HL      ;save HL      EB
        LD H,E        ;              63
        LD L,+10      ;HL← 256*HL+10 2E OA
        OR A          ;clear carry   B7
        SBC HL,DE     ;HL← 255*HL+10  ED 52
        ADD HL,HL     ;HL← 510*HL+20   29
        ADD HL,HL     ;HL← 1020*HL+40  29
        ADD HL,DE     ;HL← 1021*HL+40  19
        INC HL        ;HL← 1021*HL+41  23
        POP DE        ;restore       D1
        POP AF        ;registers     F1
        RET           ;return         C9
```

This would have made a respectable seeming Datasheet if Dr Brian Ripley of Imperial College of Science and Technology had not written:

'You ask if there are better multipliers: there are! The best reference is indeed Knuth, but the second (1981) edition is needed. He stresses the importance of the spectral test which identifies the problems with all generators known to be bad for other reasons. None of a = 257, 765, 889, 989, 1021 or 2009 passes acceptably. High potency is a necessary but not sufficient condition for a good generator. The choice of a = 257 is dreadful, and a = 765 and 1021 are bad. A search through multipliers from 1 to 2001 with a = 1 mod 4 (so the period is M = 2**16) suggests the

following, in roughly decreasing order of merit: 293, 389, 1509, 249, 1785, 685.

'Little seems known about the choice of c except that it should be odd. All the more powerful tests look at the whole sequence, which doesn't depend on c. The choice of c = 41 seems as good as any.

'A more serious point is whether 16 bits are good enough. It seems that for serious work they are not. The spectral test looks at the lattice of successive k-tuples (X_i/M, X_{i+1}/M, ... X_{i+k}/M). In four dimensions the points of the lattice are at least 1/16 apart, which is very different from the uniform scatter they should have. It would be worth the effort of producing a 32-bit generator. Try a = 69069, 71365 or 100485.

'Unfortunately this is a

rather technical subject area in which many mistakes have been made. (See, eg, P J Brown's comments in 'Writing Interactive Compilers and Interpreters'.) All I can say is that it is one of my research interests and the algorithm used is an improvement on Knuth's.

So, if we are sticking with our algorithm $X_{i+1} = aX_i + C \text{ mod } 65536$ and 16 bits, we need a routine with 'a' = 1509 (potency of 5, > 655 and < 64880) in order to satisfy all our correspondents. But what about a 32-bit routine with an 'a' of 69069, 71365 or 100485!

This is where W E Thomson of Aldeburgh comes in. For some 20 years he has been unhappy with numbers using a modulus which is a power of 2, because of their non-random nature when you look at the individual bits.

For 16-bit numbers and M = 2**16 = 65536, the leading binary digit, bit 15, has a period of 2**16, but bit 14 has a period of only 2**15, bit 13, 2**14 and so on; the 2nd least significant byte repeats every 256 numbers and the numbers are alternately odd and even.

W E Thomson prefers the well-known $r(i+1) = u*r(i) \text{ mod } M$, where M is a large prime and u one of its primitive roots, with u and M chosen to avoid full-length multiplication and division. For 16-bit numbers the obvious choice to him is the Fermat prime 65537 = 2**16 + 1 and he sends a routine using this for our first Datasheet this month.

He tells us Sinclair uses this modulus in the ZX80/81 with a primitive root of 75. W E's primitive root, 254, lends itself to simplifying the multiplication.

Datasheet

;=RANDM-16-bit pseudo-random number generator

;/CLASS:2 (not position independant)

;/TIME CRITICAL?: no

;/DESCRIPTION: generates a 16-bit number from the series $r(i+1) = (254 * (r(i)+1) \text{ mod } 65537 - 1)$

;/ACTION: The 24-bit number $p = 254 * (r(i)+1) - 1$ is built up in A & HL thus: Let $r(i) = 256 * r1 + r0$; Then since $254 = 256 - 2$, $p = 65536 * r1 + (256 * r0 + 253) - 2 * (256 * r1 + r0) = 65536 * A + HL$

;/ If HL-A >= 0 then $r(i+1) = HL - A$

;/ If HL-A < 0 then $r(i+1) = HL - A + 65537$

;/SUBR DEPENDANCE: none

;/INTERFACES: two bytes of directly addressed RAM,

;/ used to store the previous random

;/ number, r(i), or an arbitrary seed.

;/INPUT: a seed or the previous random number in

;/ store addresses RN,RN+1

;/OUTPUT: the new random number r(i+1) appears in

;/ HL and is also transferred to RN,RN+1

;/REGs USED: A,DE,HL

★ NEW BROOM FOR EPROMS ★ TEX ERASER SWEEPS CLEAN!

EPROMPT is Prompt Enough!

Eproms need careful treatment to survive their expected lifetime. Rushing it could burn their brains out. So cop-out of this helter-skelter world; take it easy the TEX way and give your chips a well-earned break. Cool, gentle and affordable; EPROMPT does it properly.

- ★ 16-chip basic economy EPROMPT EB: £32 nett; £39 c.w.o. ★
- ★ 32-chip interlocked de-luxe EPROMPT GT: £40 nett; £49 c.w.o. ★

TEXTIME
is
Tea-Break Time!

Our EPROMPT needs just half-an-hour to finish its job; this is the proper erase time for all Eproms. While it's busy you may as well take a break yourself, but don't take too long without a timer on the job; over-erasing can shorten data storage time. So our TEXTIME will remember to turn out the light and your chips will forget nothing new.

6502/Z80 check digit

To reduce the chances of miskeying important numbers (say a product number when asking for its price or availability or an account number when asking for its balance) it is common, in business applications, for such numbers to have a check digit added on the end. The check digit is calculated by multiplying each digit of the basic number by a weighting digit from a fixed sequence, adding all the results together, dividing the final result by 10 and taking the one-digit remainder as the check digit.

If, for example, the weighting digits are 1, 3 and 7, a basic number of 2784 becomes 27843 with the check digit, 3, calculated:

$$\begin{array}{r} 2 \times 1 = 2 \\ 7 \times 3 = 21 \\ 8 \times 7 = 56 \\ 4 \times 1 = 4 \end{array}$$

10) 83

8 remainder 3

If any digit in the number 27843 is entered incorrectly, it is probable that the number will fail the check digit test and the user can be asked to re-enter the number correctly.

At the end of Chapter 8 of his book *Z80 Assembly Language Programming*, Lance A Leventhal sets an exercise to write a routine to calculate a check digit from a string of BCD digits with this weighting 1, 3, 7 mod 10. Our next Datasheet, CADIDZ, from Dave Barrow of Hemsworth, gives the routine to do this in both Z80 and 6502 code.

Datasheet

;=CADID-BCD Checksum

```
;/CLASS: 1
;/TIME CRITICAL?: no

```

I hardly dare draw your attention to the sly use in CADIDZ of the non-existent SLI (shift left and increment) instruction. But what more perfect application of it could there be than to implement $m \leftarrow m * 2 + 1$ in calculating check digits with a 1, 3, 7 weighting specified by

Levanthal ?

Nobody reported non-execution of the mystery op codes CB 30 to CB 37, when we asked in Feb 81. But if any reader has a Z80 processor which doesn't execute SLI D, let us know and we will apologise.

Extra instructions-Z80

The code printed in April for LD HL,(HL) is improved by Roger Hargrave of Crawley to:

```
PUSH DE ;D5
LD E, (HL) ;5E
INC HL ;23
LD H, (HL) ;66
LD L,E ;6B
POP DE ;D1
RET ;C9
```

Roger asks why not a LD DE,(DE) and gives:

```
PUSH AF ;F5
EX DE,HL ;EB
```

```
LD A, (HL) ;7E
INC HL ;23
LD H, (HL) ;66
LD L,A ;6F
EX DE,HL ;EB
POP AF ;F1
RET ;C9
```

or a LD BC,(BC) not so conveniently coded as follows:

```
PUSH AF ;F5
LD A, (BC) ;0A
PUSH AF ;F5
INC BC ;03
LD A, (BC) ;0A
LD B,A ;47
POP AF ;F1
LD C,A ;4F
POP AF ;F1
RET ;C9
```

LISP

Michael Liardet spent several years as a research worker in artificial intelligence and computer aided design and has worked for the last two years as a systems consultant for a well-known microcomputer systems house. Here he presents an overview of one of the most fascinating of computer languages.

In this article I shall present the background and a basic introduction to the programming language Lisp. As a motivation for the readers who doubt that Lisp can hold any advantages over their own favourite language, I shall wind up with an almost trivial Lisp program that would be a fairly daunting project in most other programming languages: the symbolic differentiation of an arbitrarily complex mathematical expression.

Lisp is a programming language widely used in artificial intelligence research but now available to the more general public through various implementations on micros. Lisp is an acronym for LIST Processing and, although not quite the earliest list processing language, it is certainly the earliest one that is still with us. Designed by John McCarthy and implemented by him and his students at Massachusetts Institute of Technology, the language has been around for over 20 years now, which certainly pre-dates the more familiar Basic and Pascal (both from the late '60s).

In these last 20 years, Lisp has been used on a wide variety of fascinating research projects such as computer chess, natural language understanding, automatic theorem-proving and even program correctness verification. In addition, it has spawned a number of other languages, most of them not widely known outside the AI community, including languages like Prolog and Pop-2.

The language has not been greatly used outside academic circles but this is due more to general unawareness of it rather than some intrinsic flaw. Certainly the language could be extremely useful in, for example, the implementation of a database system where complex relationships and interrogations need to be handled. It could be a highly relevant language in other applications, too, but it does not look as though the great mass of Fortran/Cobol/Basic programmers are going to be reaching for their Lisp manuals just yet!

Lisp completely outclasses the better-known languages when symbol processing and complex data structures are required. It's ideal when ideas need to be quickly coded up, tested and re-evaluated, etc. (Once the ideas have been shown to work, the solution can, if necessary, be re-coded in some other language which can execute them more efficiently — most of the super-fast machine-code chess programs are based on principles first explored by Lisp programmers.) Most Lisp systems, mainframe and micro alike, are fully

interactive and generally interpretive rather than compiled, just like Basic in that respect at least! An interesting historical note: a lot of the pioneering work in interactive multi-user mainframes was based around Lisp systems.

Following its strong emphasis on symbol processing, Lisp tends to pay lip-service (Lisp service?) only to number-crunching facilities. So if you want to have some fun with matrix inversion (does anybody?) then you had better stick to Fortran and friends. If, however, you want to experiment and possibly break new ground with some AI project, or even if you are just interested in learning some new programming techniques and concepts, then there's a whole new world awaiting you!

Before embarking on a quick run-through of the Lisp features, a word of warning to the experienced programmer: Lisp is likely to have next to nothing in common with any previous language of your experience. Thus learning Lisp is almost like learning to program all over again! This is not going to be particularly discouraging to someone who cannot yet program anyway but does place a higher than expected learning curve in front of someone who is expecting it to be as easy as, say, a transfer from Fortran to Basic.

So much for the background; but what is the language like to use? The first sight of a Lisp program is, to put it mildly, likely to be slightly discouraging. With its vast numbers of parentheses and curious terminology, the language looks almost as unreadable as APL. (Incidentally, it has at least one other feature in common with APL — the fanaticism of its converts!) Anyway, bear in mind that beauty is only skin-deep and try not to be put off by superficialities. The language has great beauty and elegance underneath all those parentheses! For example: just about everything, from a simple arithmetic expression through to conditional expressions or even complex function definitions, is based on the same underlying structure: the list! As the data is also generally represented in lists, some very useful possibilities start to emerge — for example a program to modify a program can be written as simply as a program to modify a data structure. (If you are wondering why you should need to do that then ask yourself what a program (as opposed to PCW!) editor is? (By the way the Lisp lesson has started (basic training in the use of '(s (and ""s too!)))).

To get some sort of feel for the language let's see how you might translate a relatively simple Basic statement

into Lisp. We will break down the translation into simple stages. Of course the intermediate stages are for explanatory purposes only and don't resemble any programming language yet devised! Let's try:

IF A+B=2 OR C*D< 5 THEN E=C-D

If we now introduce brackets everywhere, to make the order evaluation absolutely explicit (in Basic, order of evaluation in expressions is implicitly determined by operator precedences):

(IF (((A+B)=2)OR((C*D)<5))
THEN (E=(C-D)))

Next we re-name most of the functions with rather more lengthy names. Note that IF... THEN translates as COND, '<' as LESSP and the assignment '=' as SETQ. We won't bother if we now have to write the expression on several lines, as Lisp always ignores the way a program is laid out, and just relies on the parentheses to determine when expressions begin and end:

((((A PLUS B) EQ 2) OR ((C TIMES D)
LESSP 5)) COND
(E SETQ (C MINUS D)))

Now there is only one step left to reach Lisp. All the functions, currently lying between their arguments, are moved in front of their arguments and one extra pair of brackets (just after COND) is introduced.

Lisp uses 'prefix' notation; to add 2 and 2 we say PLUS 2 2. So the actual Lisp translation looks like this:

(COND ((OR (EQ (PLUS A B) 2)
(LESSP (TIMES C D) 5)
(SETQ E (MINUS C D))))

The extra brackets (mentioned above) must be introduced to allow for the fact that the Lisp COND is more general than Basic's IF... THEN. Most Lisps support:

(COND (test1 do this)
(test 2 do this)
etc)

This is the IF... THEN... ELSEIF structure and thus (COND test1 do this) would be a correct translation.

Having seen what a fragment of Lisp code looks like, now let's look at a fragment of Lisp data. Let's suppose we need to represent details of various people's names, ages and sex. (Imagine we have written a program to organise the seating at a dinner party or some similar style of problem uncomplicated by disk accesses or validations, etc.) Under these circumstances, in Basic we would probably choose to set up the details in DATA statements and then initialise pre-dimensioned arrays with these details. The Lisp way of doing this would be:

(SETQ PEOPLE '(BASIL 32 M)
(CYNTHIA 30 F) (JOHN 28 M))

The variable PEOPLE is assigned (SETQd) a list of length three (it could easily be much longer), each element in the list itself being a list of length three. A list is defined by enclosing its elements ('atoms') in parentheses. Notice the small quote "" just before the start of the list. This single character is really all that is needed to distinguish between program and data. It means that the list following is to be treated literally and not 'evaluated' — to use the Lisp jargon. In contrast, a list like (PLUS 2 NUM) would not generally be quoted as normally we would be expecting Lisp to evaluate it to the number two greater than NUM. Notice also that there is no closing quote — the parentheses determine the extent of the quotation.

Now, suppose we need to access details of the first of the PEOPLE. What is required is the front or head of the list held by the variable PEOPLE. The Lisp function CAR returns the head of a list and so (CAR PEOPLE) will return (BASIL 32 M). The sister function to CAR is CDR which will return the rest of a list without its head. These two functions used in combination allow any part or sub-part of a list to be accessed — eg, CAR (CAR (CDR PEOPLE)) returns CYNTHIA. The terminology CAR and CDR by the way, is a hang-over from the original terminology where these functions were encoded using Contents Address Register and Contents Decrement Register machine instructions. The probable reason for them still being in use today is that it is absolutely trivial to set up alternate names — just SETQ CAR or CDR to name of your choice and use that instead!

Before moving on from the data structuring, there is only one other major Lisp list function to cover, CONS, which constructs lists. Thus if we want to add another person, say (JEAN 21 F, to PEOPLE then we use CONS to construct a new list whose CAR (ie, head) is (JEAN 21 F) and whose CDR (ie, tail) is the old list PEOPLE. The new list is simply SETQd (ie, assigned) to PEOPLE which will henceforth have a list of

since conditionals, loops and so on are not counted as being expressions, but in Lisp things like COND, as we have already seen are not greatly distinguished from things like PLUS and so function definitions are not really limited in Lisp at all.

It is possible to determine the length of a list by setting a counter to zero and then repeatedly CDRing the list and incrementing the counter until there is no list left to CDR (Lisp calls such a list

```
(DE DIFF (X)
(COND
  ((EQ 'X X) 1)
  ((ATOM X) 0)
  ((EQ (CAR X) 'PLUS)
   (CONS 'PLUS (CONS (DIFF (CADR X)) (CONS (DIFF (CADDR X)) NIL))))
  ((EQ (CAR X) 'MINUS)
   (CONS 'MINUS (CONS (DIFF (CADR X)) (CONS (DIFF (CADDR X)) NIL))))
  ....
  (T 'UNKNOWN)))
```

Fig 2

NIL — equivalent to a pair of parentheses with nothing between them). This sort of approach is an iterative solution but we shall consider an alternative recursive solution: to find the length of a list, find the length of its tail and add one. If it doesn't have a tail, (ie, it's NIL) then its length is zero. The essence of a recursive solution is that it doesn't 'try very hard' to solve the problem but just simplifies it enough to call upon itself again to solve the simpler problem and so on until the solution is transparently obvious (when the list is NIL the answer is 0). Without further ado, here is the code for LENGTH (DE is the function defining Function, called DEFUN in some dialects):

```
(DE LENGTH (LIST)
(COND ((EQ LIST NIL) 0)
      (T (PLUS 1 (LENGTH
(CDR LIST))))))
```

You may wonder how a Lisp function returns a value. Well, in this particular instance, LENGTH will return either 0 (if (EQ LIST NIL)) or (PLUS 1 (LENGTH (CDR LIST))) (if it isn't, T means 'true' and will always satisfy a conditional).

```
DIFF (A+B) = DIFF (A) + DIFF (B)
DIFF (A-B) = DIFF (A) - DIFF (B)
DIFF (A*B) = A*DIFF (B) + B*DIFF (A)
DIFF (A/B) = (B*DIFF (A) - A*DIFF (B))/B²
DIFF (Aⁿ) = n*(Aⁿ⁻¹)*DIFF (A)
DIFF (n) = 0
DIFF (X) = 1
where A and B are expressions in X and
n is a constant
```

Fig 1

length four rather than three. In case you can't work this out for yourself the code to do this is:

```
(SETQ PEOPLE (CONS '
(JEAN 21 F) PEOPLE))
```

At this point we have covered enough ground to start on a simple Lisp function — a function to determine the length of a list. A Lisp function, by the way, is almost directly analogous to a Basic function, which is usually restricted to being an expression. In Basic this amounts to a very severe limitation,

Basic programmers who may not be familiar with recursion should try and master it. Most interesting applications of Lisp rely heavily on recursion and an iterative technique very rarely works as well. For example, many games programs use a variant of the recursive algorithm — to evaluate the current position generate, in turn, every possible move to modify this position and evaluate the new position (recursively). The value of the position is the value of the best possible continuation.

Well at this point we have really come far enough to demonstrate the promised program to differentiate symbolically an arbitrarily complex mathematical expression. First a quick refresher course for those whose O-level maths has got a bit rusty (using DIFF to mean 'differential with respect to x') — see Figure 1.

The Lisp implementation of differentiation is almost solely a syntactic translation of the above, substituting

Lisp symbols for mathematical ones and using the standard Lisp 'grammar' of prefix function operators, rather than the infix — see Figure 2.

Not all of the definition of DIFF has been included here. The rules for *, / and powers should be inserted as '...'. Briefly the definition can be read as: To define differential of x:

If
 1 x is in fact 'x' then return 1.
 2 x is not a list (and it can't now be 'x') then return 0.
 3 x's head is 'plus' (and it must now be a list) then return a list of the form (plus (diff of 2nd element of list) (diff of 3rd element of list)). NB:CADR, etc, is the abbreviation of CAR(CDR).
 4 x's head is minus then return a list of the form (minus (diff of 2nd element of list) (diff of third element of list)).
 5, 6 & 7. An exercise for the reader!
 8. If all else fails then return 'unknown'.
 To use this function (assuming by now you have (a) rushed out to buy a Lisp system and (b) typed it in), just enter:
 (DIFF '(PLUS (TIMES X 3)
 (quotient 4 X)))

If everything is okay the system should immediately respond with the answer. Notice how, although the answer is mathematically correct, it is not in its simplest form, containing sub-expressions like (TIMES 1 3) where 3 would do just as well, etc. Well, I didn't promise a simplification of a symbolic differentiation, did I? In any case it leaves you with a nice little follow-up exercise! Or alternatively (if your version of Lisp supports floating point arithmetic), you can use this routine without simplification in, for example, a numerical analysis program which would otherwise expect the differentiation to be done by the user (eg, Newton's method to find the roots of an equation) — a touch of irony for Lisp to be useful in numerical analysis!

Finally, for any reader who has been stimulated to the point of buying a Lisp system, here are the best known currently available (but not reviewed!): Owl Lisp — for Apple II. (My thanks to Owl for lending me a copy — the system worked very reliably and the examples above use the Owl dialect.) Mu-Lisp — a Microsoft product for CP/M systems. Mu-Simp — Ditto with simplification facilities. **END**

DBMS2

DBMS2 is a set of programs written in Basic to run under the CP/M operating system. It provides facilities to store and access data in individual files and also some linkage among data fields in different files. It is produced and supported by GW Computers of London, who supplied my review copy. GW also markets an accounting suite based on the same approach, with a similar user image.

DBMS2 uses a 'driver' file, called VOCAB file, to keep track of the characteristics of all the data files it currently knows about. So, to use a data file, you must have appropriate entries in a VOCAB file on the program disk. This file contains the names of all the files currently available, and information about their structure. When the main DBMS2 program is first loaded, it displays a menu on the screen; the first 12 items show the names of data files held in the current VOCAB file. The menu also contains a list of functions which are available before a particular data file has been selected for processing: a typical main menu is shown in Figure 1.

The main DBMS2 program carries out functions such as data input, editing, retrieval and update. Special functions, like sorting, are carried out by separate programs. Once the particular program you need has been loaded, you can dispense with the program disk until you need to change programs — the only necessity is to have a valid VOCAB file available for the program to use. Once you have selected the current data file, each program prompts the user to choose among processing options for the required responses in sequence, requesting a single character response — Q for Quit, R for Random access (by record number) and so on. This prompting is hierarchical, so that once you have, for instance, selected a type of access, your only alternatives are either to continue responding to each prompt in turn or to Quit to the main menu. (A diagram showing part of the prompt system as it looked to me is shown as Figure 2.) There is no provision to allow the experienced user to override the prompting mechanism.

DBMS2 stores information in fixed length records; each record in a single file must have the same structure. The basic unit of data display for both input and retrieval is the screen. Each record is displayed on a single screen, one field per line and one record per screen.

A SCREEN-BASED DATA MANAGEMENT SYSTEM

Kathy Lang continues her series of database reviews

Records are stored using Basic random access files, so that access to records by record number is extremely fast, but is less quick when retrieving by other fields, unless the data file has previously been sorted.

Constraints

Records in DBMS2 may contain up to 1400 characters, and files may have up to 32,000 records; within those limits, the total size of any one data file can be as large as the physical disk or the operating system permits, whichever limit you hit first, provided you leave enough space for the VOCAB file. Subfiles, that is files containing subsets of the main data file created by running a selection option on the main file, may contain records not more than 250 characters long. Because data file names are stored in special locations in the VOCAB file, and displayed in the main menu, you are limited to a maximum of 12 types of files on any one disk. Names of data files may not be more than eight characters long, including the two character drive prefix where the file is on drive B (which is of course a greater limitation than that imposed by CP/M, where file names may be eight characters long excluding the drive prefix).

In the current version of the package, a record may contain up to 20 fields, and the total length of each field and the 'label' used to describe it must not exceed 70 characters. A subsequent release of the package, due out in the late summer of this year, is likely to permit at least 100 fields per record.

Input and updating

Data file creation involves providing the VOCAB file with the necessary entries describing the structure of the records

in the file. DBMS2 provides a program which prompts for the appropriate responses, or you can edit the VOCAB file directly — not a process I'd recommend, even for the experienced user, as it is very easy to get it wrong. For each field, you can specify whether it is to be text or numeric and, if the latter, whether its validity is to be checked on input. You must also specify the field length. There is no specific date format, so dates have to be entered in year/month/day order as ordinary numbers if you are likely to need the records sorted in date order.

Records are stored in order by the record number, which must be included as one of the fields in the record. Record numbers need not be consecutive or start from 1, so you can use an existing numbering scheme provided the numbers don't exceed the limit of 32767 imposed by MBasic. However, if you do want to use consecutive numbers, you can make use of the prompt that DBMS2 gives you, displaying the next 'free' record number. To put records in the file, you respond to the main menu with the number of the file you want to access, request random access and then give the number for the record you want to insert. A blank record is displayed on the screen, one line per field, using the labels specified in VOCAB. Amending is carried out in a similar way — you specify the record you want to amend, using one of the access methods outlined in the next section, the record is displayed, and you can then edit any fields which need changing by retyping them. When creating a sequence of records which have a few common entries, you can cause the common fields to be carried over without having to type them again. If two records are very similar, you can call up the existing record by number, overwrite the number and make the necessary changes and store the record, whereupon the new version will be saved without affecting the original record.

So much for inserting and amending records from the keyboard. To get data into DBMS2 from other programs — for instance, to import straight ASCII data files — you have to write your own Basic program to rewrite the data to a Basic random access file. I wrote a program to do this quite quickly for my benchtest data, but you do need the necessary understanding of Basic programming. Having converted the data, you simply amend the VOCAB file to

reflect the new file's name and record structure in the usual way.

However, utilities are provided to get data out of DBMS2 into sequential format, and to reconfigure DBMS2 files to have a different record structure, although I didn't get a chance to try these out.

Displaying data

Data records are always displayed in the same format, with the name of each field down the screen and the value alongside it (sometimes accompanied by totals — see the Calculations section later). You can get access to particular records in four ways. If you give the record number, DBMS2 will go directly to the record in question. If the file has been sorted on a particular field, then you can request keyed access via that field; this just means that the program utilises the fact that the data has been sorted on the field in question to use a binary search technique to find the right record with a small number of reads — for instance about 10 reads for a file of 1000 records.

Where you need to access records on the basis of other fields, sequential access is necessary, that is each record is read in turn in the order in which it is stored. In this case, all the records may be read, or a subset selected. Whichever access method is used, after displaying the requested record you can then scroll forward or backward from that point in the data file, for instance, displaying the records with record numbers immediately next to that of the current record, but to access another record directly by number or key involves quitting the current search, reselecting the file from the main menu and requesting the access method all over again.

In addition to the methods of accessing records by field values, it is also possible to make an explicit relationship between one record and another in the same file, or between a single record in one file and a corresponding record in another. This is achieved by having at the beginning of a data field a pointer consisting of the number of the file and of the record to which the linkage is to be made. This could be a quite useful and powerful facility; for instance, if you had two files of information about the same people — say one containing their accounts information and another their names and addresses — you could use the same record number for someone in each file, and have a field in each record referring to the equivalent record in the other file. This would enable you to make connections between related records in different files without going back to the main menu.

However, since the relationship must be set up individually, the facility would be much less useful if you wanted, say, to link two dissimilar files with one common field, for instance a product file and a supplier file where only the supplier identifier was common to the two files. The other constraint is that while you may use an ordinary data field for this purpose, and have it contain raw data too, by delimiting the pointer with the special characters '!'C' (which does of course prevent you having this combination in your data if you use cross-referencing) the manual advises against doing this. But to use a field or fields specifically for this purpose would limit

the user even more in terms of the number of data fields available.

All these methods of displaying your data are exclusive, in the sense that once you have opted for a particular form of access — random, keyed, sequential or cross-reference — to change the mode of access involves quitting and selecting the data file again from the main menu.

Reporting

Reporting on complete files is achieved by creating a print mask which dictates the layout of the printed report. Two types of mask are available: for the simpler version, you specify the number of fields you want to print and the width of the printed page. The program divides that width by the number of variables, allows that figure as the width for each column of printing, and prints each value centred within the column. The second type of mask enables you to specify the column number to which a value is to be right-justified when printed. In either case, you can set up headings, and ask for actual field values (referring to fields by number), for computed values, and for accumulated totals to be printed. Where computations or totals are required, the rules by which the values are to be calculated must have been set up in advance, using the 'compute functions' call from the main menu. There are no facilities for sub-totals when field values change.

In addition to printing all or parts of a file using a mask, you can request a printout of a record as you run through the file using any of the permitted display access methods.

Selecting sets of records

When using sequential access, you can define one or more criteria by which to select particular records for display or printing. Selection can operate over all the records in a file, or a subset specified can be specified by record number. The criteria can be defined when you select from the file, or in advance and saved in a text file and recalled when needed. If you just want to select a record where one field has a particular value, you can specify exactly that. If you want something more extensive, you are presented with a screen display of the record structure, and must specify selection criteria for each field in turn (carriage return allows matching any value) — ie, you must specify whether or not you want to select on each field, rather than just specifying those fields on which you *do* want to select. With a maximum of 20 fields per record, this is not a serious problem, but when that maximum is increased it could become a great nuisance.

The process of specifying selection criteria has some highly esoteric features. One of the options available allows you to specify identity with one or more constants within a field (eg, to ask if a name is equal to SMITH or JONES or BROWN). You request this by typing a question mark followed by the first value you want to match, then another question mark followed by the second value and so on. When you type the second question mark, the cursor moves back to the beginning of the test field,

Trust Comart to turn a new ADVANTAGE

into a major benefit.

ADVANTAGE™ is the exciting new, packaged high performance desk top computer with integral video screen. It brings the proven reliability, so long the hallmark of NorthStar★ products, into new and broader fields of application.

Add the established Comart technical, software, and service support and the ADVANTAGE becomes a major benefit to users looking for a low cost, yet versatile, dedicated system. NOW!

Just look at the benefits.

ADVANTAGE is economical: A complete integrated accounting system and word processing system will cost around £4500 depending on the printer and software used.

ADVANTAGE is versatile: You have the benefit of application software that is already available and proven on NORTH STAR Systems.

ADVANTAGE is new: It's Business Graphics can convert data into bar charts, pie charts, graphs, and 3D representations instantly. And, what you can see on the screen, you can print.

For the technically minded, ADVANTAGE is a 4MHz, Z80A™ based microcomputer with 64K dynamic RAM, a 20K Byte display dedicated RAM, plus 2K Boot PROM.

An auxiliary 8035 processor provides keyboard and disk control. It has a 12" green screen, and integrated twin quad capacity 5" disk drives providing 720K Bytes of data storage. It has an 87 key Selectric™ style keyboard with 9 control keys, 14 key numeric/cursor control pad, 15 programmable function keys, and 49 conventional character keys.

ADVANTAGE comes complete with Business graphics, self diagnostic software and graphics demo software. Its G-Basic/G-DOS, and Graphics CP/M™ are supersets of the industry standards. They enhance ADVANTAGE'S Graphic and Character Mode capabilities, and provide a consistent operating environment for development and application programs written in any other CP/M compatible language.

To see more of the benefits of the ADVANTAGE ask your Comart Dealer, or send now for further information.

TM Advantage is a trade mark of North Star Computers Inc.
Z80A is a trade mark of Zilog Inc.
Selectric is a trade mark of IBM.
CP/M is a trade mark of Digital Research Inc.

DBMS2

so that the second value overtypes the first. Thus you don't see all the possible matches you've selected for that field, only the match most recently entered.

'Identity' in this context means 'identical with or contained within'; for example, a request to match 'SMITH' would also match 'SMITHSON' and 'ARROWSMITH'. This means that if this test were used in an attempt to select all records with a numeric field identical with '1' the program would match values of that field such as '12', '212' and so on, as well as just '1'. There is a different test for matching a number exactly, but no equivalent is available for text fields. Fields may also be tested for being greater than or less than a numeric value (these comparisons don't seem to work with text fields; the program doesn't complain, but it doesn't find the records with matching fields either) and for being not identical with a value. Apart from the special case of textual identity, you can make only one test on each field, so that I could not, for instance, find a way to test for a numeric field having a value within a range. The results of the tests on each field are ANDed together, except that it is possible to OR a pair of results where the test for each is identity with a constant.

It is also possible to store in another file the records which a set of tests select, provided the subset which results

does not contain more than 250 records.

Sets of selection criteria are stored in ordinary text files, so if you understand their format you can edit them as you might any CP/M text file.

Sorting records

DBMS2 has two sort programs available — a memory sort and a disk sort. They can be invoked via the 'call other programs' option on the main menu. The memory sort is restricted to quite small files but the disk sort, though much slower, allows you to sort a file as large as the disk can hold. This is because if you specify the same file name for source and destination files DBMS2 uses an interleaving technique so that the sorted file overwrites the source file. Sorting is allowed on only one field at a time, so that to sort on several fields you would have to do one sort for each field starting with the least significant. Of course, you may have as many sorted versions of the raw data file as you like, one for each field on which you might want keyed access. You can specify all or part of the field to be used as a sort key, but as far as I could tell sorting was always in ascending order.

Once sorted, a file can be used through the keyed access method by matching against the field on which the file was sorted. However, the program takes no steps to ensure that if the parent file is changed the sorted versions keep in step — you just have to re-sort the data file, which is a slow process for a file of any size. This, of course, is a criticism which applies to all the packages I have reviewed so far. But it is of

greater significance with DBMS2, as it is only by sorting the whole data file that you can have keyed access to fields other than that containing the record number. Without any facility for creating indexes which relate field values to record numbers, the user must rely heavily on full sorts to permit direct access to individual records.

Calculations

DBMS2 provides the means to do three kinds of calculation. You can carry out simple calculations on the values of particular fields and display the results when the record is displayed, or store the results in another field — for instance, you can update the old price of stock by 5 percent and place the old price in another field in the record. You can also accumulate values across records. These calculations can be displayed when you show records on the screen, or when printed out. The ability to display fields, calculations derived from them and accumulated totals all at the same time reflects the accounting background of the parent package.

The kinds of calculation you can do contrast curiously with the selection criteria you can set up for sequential record access. With selection, you can test values only against constants and not against the values of other fields. With calculations the opposite is true: you can perform calculations only with respect to field values and cannot, for example, add a constant to a field. Calculations allowed include the ability to add, subtract, multiply and

GW Computers Ltd

*** THE NEW DBMS (DATABASE) ***

DBMS2 is a **record relational** as well as a **file relational** database management tool that is capable of being at different times, many different things. **The one core program** can be set up to perform tasks normally associated with the following list.

Accounting	Budgetting	Cashflow
Stock control	Address mailing	Letter writing
Simulations	Time recording	Filing
Calc-type predictions	Hospital indexing	Profit analysis
Bureaux services	General analysis	Mathematics
Answer what-if's	Employees records	Tabulate values
Print reports	Sort files	Edit records

Within hours perform all the above in **French** or **German**. The list is as endless as that which meets the requirements of your own imagination. **Within the appropriate frames of reference** you could ask questions like the following:

Find someone whose name contains a W or X or Y or Z, who is either in London or Birmingham, and available for work at a salary of less than 10,000.000; and is under 40 years of age, not married, of credit worthiness grade 1, with a car, prepared to travel, and who likes horses, does not mind the hours he works, is congenial and has good references. **When you find such persons** produce a printed list of them showing their names, telephone numbers, and what their salaries are as well as their salary if **increased by 10%** and show their availability for work. At the end of the list enumerate the total of such persons.

Find all stock items that are codes **micro-computers** that are either in warehouse 1 or warehouse 2, where the quantity on hand is more than 50 units, the cost is less than 1000.00, the selling price higher than 2000.00; that are not in cartons, bought from supplier 52, allocated more than 20, rated for tax at .15% and weigh less than 50lbs. **When you find such categories** then print a report showing the description, cost price, quantity on hand, lead time for refills, what the selling price **should be if raised by 12.3%** as well as the profit in either per-cent or round figures of that projected selling price.

Find all patients who suffered from cold, that are either girls or women younger than 23 years old, and who live in London at a socio-economic grade higher than 3; do not smoke; have more than 3 children, are currently at work and where treatment failed to effect a cure in under 6 days. **When you find such persons** then print a list showing their age, marital status, income, and frequency of illness in the past 2 years.

Currently you can ask **7 types** of questions **20 times** for a **single** selection criterion, and then you can compute **10 mathematical relationships** between the questions for the individual **as well as** for the total number of matches. In all some **60** bits of information relating to **one** record or **a group of records** on simply one permutation of the selection criterion, with a cross referencing facility as well.

Every word in the system, as well as the file architectures, print masks, and field attributes, is capable of alteration by you **without** programming expertise (but with some thought).

ALL IN ONE PROGRAM FROM G W COMPUTERS. THE DBMS2!!

THE NEW RELEASE DBMS 2a

In the time with the bechtest article in Personal Computer World on pages 138-143, we append our notes regarding some subsequent implementations arising from constraints referred to by Dr Lang. Version 2a has now the following new features:

- All fast output to screen or printer has a pause sequence that stops output at a prompt that enables the user to either continue, amend, jump, or quit.
- A default to all records option exists now which precludes the need to specify a record range when searching files.
- The runtime module BRUN.COM is now no longer needed on the master disk.
- It is estimated that by the time this article comes to press, the program will have the ability to create records of up to 100 fields, and that a full screen form generating module will be implemented to simplify the creation of file architectures.

DBMS2

divide one field by another, to add or subtract from a field a percentage of that field, and carry out some standard functions such as squaring the value of a field.

Security

The package provides a facility for copying to the printer every record as it is input or updated. Apart from this transaction logging, DBMS2 does not provide any security facilities such as password protection of files or masking of record display so that only some fields are seen.

Tailoring

Because the program keeps all its prompts in the VOCAB file along with the record structure information, they can be easily changed if the user wants to make them more appropriate to his environment, for instance by translating them into another (human) language. Otherwise, tailoring depends on the user's ability to write Basic programs.

Stability and reliability

The package is regularly updated, and users who keep in touch with GW get updates, at present free of charge. The version of the package I had seemed reliable; I managed to produce its catch-all error message several times (you are asked to record the Basic error message number given and reload the program) but never in situations which caused me to lose data.

User image

As usual with these reviews, I shall try to distinguish comments on the appearance of the package itself from the way the package is described in the manual. I should also emphasise that GW says it is not aiming at the naive user but at people who are already reasonably knowledgeable about computing. However, I think that even experienced people will have some difficulty with the inconsistencies of the user image and the lack of any coherent model, either explicit or implicit, by which to deduce the way instructions are formed. A good example is the contrast I noted between expressions for calculation and for selection. On the other hand, the programs don't provide short-cuts for experienced users, for instance to enable the user to specify all parameters required by a routine at once, instead of having to respond to prompts one at a time.

I eventually learned to avoid the dangers of trying to build on experience in one part of the package to work out how to use another, and an experienced user should be able to cope. I found the package much easier to use when I'd drawn a diagram of the routes the prompt mechanisms appear to take, part of which is shown as Figure 2.

However, the user image also has some merely irritating features. Those I

encountered included not always being able to 'quit' (ie, get back to main menu level) from every prompt level, having to type the prompt characters in upper case (lower case letters are met with a bleep), and the vagaries of the selection process. These included the over-typing of the 'OR' responses I've already mentioned, and the fact that one does not have the option of editing the selection before it is stored. Another great nuisance is the necessity to specify the range of records over which you wish a selection to operate — the package doesn't let you default this to 'all records' but requires you to specify the lowest and highest numbers each time. Just as irksome is the inability to terminate a selection once you've started it — if, for instance, you realise too late that you've mistyped a value, and no match of the selection will be found. Since CTRL-C is (sensibly) disabled and no alternative mechanism provided, you just have to let the package find out by reading every record — and that's a long time to hang about for a large file...

I got away to a bad start with the documentation, as the page numbering, though ordered, followed no obvious pattern. In one chapter, for instance, the pages run 040, 050, 051 to 057, 060, 070... I worked out how to cope with that in the end by making my own table of contents, which also helped me to live with the fact that the lack of a coherent user image for the package itself is more than reflected in the manual. Rather than comment on the documentation in detail, I've included a couple of quotes so that readers can judge it for themselves. The first relates to the thought processes the user is expected to go through when considering altering file structures: 'The probative exercise will pass you through the stages of conjecture, as you learn by error; until you reach a true epistemological contact with your object. That will be the stage when you are in effective control, knowing and understanding the nature of the medium you are involved with.'

The other quote is from a section telling the user how to set up file structures: 'Having decided upon a system of limited lengths and restricted inputs, you will insert a number of such

records into the file and they will actually be recorded as a continuous set of characters seated side by side in one long string, separated by a "FIELD" statement after each line finish. When the file is subsequently read, it is in a manner that accounts for the field statements and understands that each is a field separator. When reading twelve such fields it is clear that the next read will be at the commencement of field 1 of the next record.'

I've tried to choose representative quotations, but they are of necessity out of context and readers should of course make allowances for that. GW is in the process of adding to the manual a set of nine 'lessons' to help new users; the first three were available when I tested the package and they are an improvement.

Costs

The latest version of DBMS2 costs £575 including MBasic (some features, such as the program which allows you to set up new file structures, require Basic to run). Even allowing for the inclusion of Basic, this makes the package as expensive as most of those I've reviewed so far.

Conclusions

DBMS2 provides facilities for creating, updating and accessing files in a limited way. At present, the user may have only 20 fields per record. File access is restricted to direct access by record number, keyed access by sorting on a single key field, sequential access, and cross-reference between fields and among fields by explicit, individual linkage. Its selection and sorting capabilities are also rather limited. But it does give the user access to almost the whole of both disk drives for data storage, since the whole main program lives in core. It would also have particular application where the types of processing required are close to those used in the accounting suite from which it derives. The package is supplied and supported from London by its originator, GW, and whenever I had queries I found the company extremely helpful. **END**

3 NEW BOOKS FROM SYBEX

To increase your technical knowledge!

Basic Programs for Scientists & Engineers By Alan R Miller 345 Pages Only £11.50

This vital book provides a comprehensive Library of Programs designed to solve problems commonly encountered in Science and Engineering. It's designed to teach BASIC programming and each program is explained in detail to help the reader develop proficiency in the use of BASIC.

Introduction to Word Star By Arthur Naiman 200 Pages Only £10.95

For anyone who owns Word Star, or is considering buying it, this book will quickly and easily teach how it works while presenting a clear picture of what a word processing program can do. The clearly written and well organised guide clarifies the process of learning how to use a high-powered word processing program.

Executive Planning with BASIC By X T Bui 197 Pages Only £11.50

This invaluable book has 3 goals.

1. To explain the quantitative methods of management decision making in clear and practical terms.
2. To dispel the idea that programming is only for specialists and that it is practical for management to have direct access to computers for analysis, planning and control.
3. To provide an efficient and time-saving set of computer implementations for quantitative analysis.

Get these invaluable books from your Local Computer Store or Book Shop. In case of difficulty send S.A.E. and we will supply the name and address of your nearest stockist by return.

PATTERNS

Alan Sutcliffe continues his series with a look at generating textures.

Misunderstanding is among the mothers of invention. As a for instance, I recently read a fascinating article in *Computer Graphics and Image Processing* about programs to analyse and then synthesise textures. Reading it again later and more carefully, I found that I had not followed it at all — but in the meantime I had written my own program based on what I thought was proposed. And it worked: at least it is capable of producing many kinds of texture. I have not used it for analysis but that seems straightforward once a texture has been digitised and stored in the computer.

For the purpose of explanation, I present a more limited program and before that a few words on the use of the textures that can be produced.

Suppose you want to simulate flying over an area of the moon. If it is possible to characterise the appearance of the surface using just a few numbers, then suitable-looking fine detail of the terrain can be invented. This will cost a little more in processor power than keeping precise data on a vast area but there will be a great saving in the storage needed and, probably more important, in the time needed to enter the data. Major known features could be imposed on such statistically correct texture.

At the level of personal computing, there are many games and simulations that would be much improved by the

addition of appropriate textures to otherwise bald and unconvincing super-fices.

The method (this much I did get right at the first reading) can be applied to any kind of display that uses a cellular array of picture elements or pixels. It is easily adapted for whatever number of colours or grey levels the system has, from simple black and white upwards.

Here is the simplest possible version of the method. Each pixel is black or white and its colour is controlled by the one immediately to the left of it and the one immediately below it. Thus there are four cases, as shown in Figure 1. The value of N , representing the colour of the current pixel, is not fully determined by its two neighbours. What is fixed is the probability of its being black or white in each case. This requires just one number between 0 and 1 in each case, the probability of being black, say. The difference between this number and 1 is then the probability of being white, since a probability of 1 represents certainty; in this case, the certainty of being black or white. Figure 1 shows some possible values.

The implementation of this version is given in Program A. The probabilities are stored in the array T . There is clearly a problem in getting the process started, since the pixel at the bottom

left of the display does not have the neighbours it needs to determine which probability applies, so these extra cells must be provided. $X(XMAX)$ is a row of cells, not displayed on the screen, to provide neighbours below for the bottom row proper. $XMAX$ is the width of the display. Similarly, $Y(YMAX)$ is an extra column of cells to the left of the main array. These are first of all filled with values 0 or 1 for black or white at random.

It may be thought preferable to fill these two starter arrays with values distributed like the values in the resulting display — but we do not know yet what will be. I have found that this edge effect from starting with a row and column not typical of the main texture is small and when some effect can be seen it affects only the bottom few rows and a few columns at the left. Each texture seems to settle down quickly to a more or less characteristic pattern,

Pixel to the left	1	$T(1,0)=0.2$	$T(1,1)=0.7$
	0	$T(0,0)=0.7$	$T(0,1)=0.5$
		0	1

PATTERNS

which remains stable across the display.

Figure 2 shows the result when the probabilities have been turned into the certainties of 0 and 1, as in lines 140 to 170 of Program A. In this case, the value of each pixel is fully determined by its two neighbours. Looking at the pattern you can see that each pixel that has black pixels below and to the left of it is white, with a probability of 1 = certainty. The whole pattern depends entirely on the values in the two random starter arrays, X and Y.

Figure 3 shows what happens when the probabilities are changed slightly to 0.9, 0.1, 0.1, 0.9. This is very like Figure 2, but with 10 percent noise added. But if the probabilities are changed completely then quite different textures result: Figure 4 shows an example with probabilities set at random.

This simple system is not complex enough to produce a very rich variety of textures. There are at least two ways to think of this intuitively. First, four variables, the four probabilities, are not enough to represent or characterise the many different dimensions of texture. Second, working at the level of single pixels is too low: there is in most textures a lowest level of detail that is more or less random and the texture itself is somehow operating at a slightly less microscopic level.

A move that copes with both these points is to use small groups of pixels. In the example presented here a simple array, two pixels by two pixels, is used, and I call this unit a cell. With just black and white there are now five possible values for a cell, ranging from all four pixels black, three black and one white, to all white. When, say, one pixel in a cell is black, it is not considered important which one it is. In Program B the setting of pixels within a cell is fixed, and is set in the array A. For a little more computer time the one to be set could be chosen at random.

Program B implements this scheme in Pascal and Figure 5 shows five textures produced by this program, where the probabilities stored in T are themselves set by calls to the random function. The function RAND takes an integer in the range -32768 to +32767, which is what the system function Random produces, and converts it to a floating point value in the range 0.0 to RANGE. Most of the variables have the same uses as in the Basic program. It is necessary to have U and V as the coordinates for plotting pixels as twice X and Y which are coordinates of the cells. The array of probabilities T now has three dimensions, there are 5 x 5 = 25 different cases for the values of the two neighbours, and for each case there are now four probabilities. The multiple calls to RAND in setting the values in T ensure more variety in these settings.

THE PROFESSIONAL'S CHOICE

Act Sirius 1

16 Bit Stand Alone micro with superb features.
128K, 1.2MB Floppies.
CPM86 as standard - £2395.

Altos

Up to 4 terminals and 40MB of Winchester Disc.
One of the biggest selling small business systems starting at £2350.

16 Bit system with 8 terminals available soon.

OKI 1F800

Quality graphics micro with full colour screen and integral printer. 64K and Basic are standard - £4750.
Wide range of peripherals available.

LSI M3

High specification Stand Alone micro. CPM, 64K and up to 10MB of Winchester in one package. Very easy to use. Detachable keyboard. User programmable function keys. From £2250.

Superbrain

Still a leader in 8 bit price performance. KGB having sold over 400 Superbrains has unbeatable experience on them. From £1875.

Word Processing - Wordstar £250, Mailmerge £75.

Full on-screen facilities enabling the printing of standard letters and preparation of mail shots.

Accounting - From £300 per module.

Integrated accounting systems with Invoicing, Sales, Purchase and Nominal Ledgers.

Financial Modelling - Micromodeller £645.

Budgets, forecasts and accounting data become easy to prepare. Allows "what if" projections.

Calculation - Supercalc £175.

Electronic worksheet for preparation of budgets and tables of data.

Record Keeping - DMS £400.

Personnel, stock or any other records with quick retrieval, sorting and reporting.

Sales Office Management - Sales Desk £300.

For the busy sales office to manage sales leads and marketing lists.

Accounts - IRIS £750.

Incomplete records and time recording systems.

Payroll - Graffcom £500.

Up to 500 employees both weekly and monthly paid. Automatic deduction for items like company pensions.

Graphics - Price depends on application.

Full on-screen graphics both colour and black and white.

Engineering - SPERT £450.

Suite of programmes for PERT analysis and civil engineering applications.

Communications - Liberator £250.

Enables a micro-computer to act like a mainframe terminal and transfer data from Floppy disc to another computer.

Languages - From £175.

Most major computer languages are available: Basic, Cobol, Fortran, Pascal and Assembler.

Solicitors - Solace £1600.

Solicitors accounting, client accounting and time recording.

Multi-terminals - MP/M and Oasis from £350.

Multi-user systems available.

POURING QUARTS INTO PINT POTS

When you plan to buy your computer equipment you normally look very carefully at the things that cost most money. You tend to think very hard about, for instance, what printer you need and can afford. People usually regard the purchase of disk units as inevitable, with no scope for savings. That is not necessarily so: this article discusses a technique which could save you money.

Have you thought carefully about how data is stored on your disk? For example, when you investigate the way numeric data is stored on the Apple Disk II using the normal facilities of Applesoft and DOS 3.3 you will discover it is rather like a sieve. Each numeric digit is put into a separate byte. This is very wasteful since each byte can hold numbers up to 255 and we can normally only put in values up to 9.

Figure 1 shows how the value 12,345,678 is stored in 9 bytes, using conventional methods. Although the number is held in binary form in memory, it gets expanded to base 10 on the disk. The accompanying program shows how the number can be compacted to three bytes expressed to base 256, as in Figure 2. This technique can make all the difference between needing bigger, or more disks, and being able to manage with what you've already got.

The example in the program is based on an imaginary requirement, in which an organisation needs to store information (sales figures perhaps) for 99 products and 29 areas over a period of 12 months. The program enables us to store numbers for all these combinations (34,452 in all), each with a value up to over 16 million. Using conventional methods this requires over 310,000 bytes. Using this method it requires only about 195,000 bytes, and can therefore be stored on a 5¼ disk II.

You can store numbers (option 1), add to them (option 2) and display them (option 3). Option 0 allows you to set the file up in the first place. Although this takes about 20 minutes it is necessary in order to avoid problems on reading fields which have not previously been addressed. Option 4 is required to close the file down, and to clear whatever happens to be in the buffer. Each option returns you straight to the Menu except option 3, which lets you read the value displayed and waits until you press any key before returning to the Menu.

The method used is by successive division to reduce numbers into three one-byte portions of values up to 255. The three byte fields are joined together in the buffer area and written to disk using the facilities of DOS Random Access storage. They are subsequently read from disk, unpacked and converted back to their original form. This process inevitably requires the use of PEEK and

POKE, since Basic by itself does not allow us to address individual bytes.

Record length is given as 256 bytes — that is the whole of the buffer area. Bytes 0 and 1 contain 1 and Return respectively. Bytes 2 to 253 contain 84 fields of 3 bytes packed together with no separating characters between fields. Bytes 0 and 1 contain the values stated because a DOS "WRITE" needs a PRINT, and a DOS "READ" needs an INPUT. The 1 in byte 0 has no data significance, of course, but is there in order to take the 84 packed binary fields on to the disk by POKE and from the buffer by PEEK. Bytes 254 and 255 are wasted because there is no more room in the sector for a 3-byte field. (The loss of the first two and last two bytes in each sector is a minor but unavoidable loss of efficiency.)

A Write Indicator (WR) is used to keep the Buffer READs and WRITEs under control in subroutines 600 and 700. Without this additional check DOS will use other buffer areas some of the time, which would prevent this method from working correctly.

Extensions

The method can be extended in four different ways.

Firstly, although the program illustrates the method with a three-byte field, the number of bytes can be changed by altering the value of 1 in subroutines 400, 600, 800 and 900, and expanding the range of values for Z. The more bytes you pack together into one field, the bigger the saving of space.

Secondly, it is possible to add to the code by recording negative numbers. This can be done by allocating one binary position for negative numbers prior to coding and POKEing them and later PEEKing and de-coding them.

Thirdly, decimals can be coded by moving the decimal point before coding and after de-coding.

Fourthly, alphabetical characters can also be coded — although the saving is not as great. Since the range of alphanumeric characters can be accommodated within six bits (0-63) it will be possible to store four alphabetical characters in three bytes by using an extension of this method. **END**

THE COMPLETE SINCLAIR ZX81 BASIC COURSE

At last, a comprehensive text for your Sinclair ZX81! The complete BASIC Course is a manual which will immediately become an indispensable work of reference for all your ZX81 programming.

Whether you have never done any programming or whether you are an experienced microcomputer user, the Complete BASIC Course will provide an invaluable aid.

The complete BASIC Course is designed to teach you to write and develop BASIC programs for the Sinclair ZX81 – no other books or aids are necessary. All is revealed in our easy step-by-step guide with programs and "test yourself" exercises all the way through.

As you become more proficient with computing, the Complete BASIC Course will continue to be an essential guide, giving you finger tip references, numerous advanced programming techniques and memory saving devices specifically for the Sinclair ZX81.

HOW TO WRITE PROGRAMS

Even if the idea of writing programs is completely mystifying to you, the Complete BASIC Course will show you just how easy it is. In no time you will be able to write and enjoy complex programs for whatever you desire.

Using the proven "TOP-DOWN" approach, the Complete BASIC Course will show you systematic and simple ways to write programs. Even experienced programmers will benefit from this Course, making programs easier to write and less prone to error!

NUMEROUS EXAMPLES

Every concept, every function is fully described by simple programs that you can enter on your Sinclair ZX81 in minutes.

The Complete BASIC Course contains over 100 programs and examples! These programs illustrate the use and possibilities of the Sinclair ZX81:

- Home use
- Financial analysis and planning
- Educational applications
- Games
- Mathematical applications
- Displays of 'Artificial Intelligence'

EVERY FUNCTION COVERED

No matter what your application, what your confusion about any function, you will find it covered in the Complete BASIC Course.

A full and detailed discussion is included of even traditionally taboo topics such as USR, PEEK and POKE.

A handy alphabetical summary section lists all functions, and provides a short description and example programs of all topics.

A PERMANENT WORK OF REFERENCE

The complete BASIC Course is an excellent reference work for experienced programmers (including tips on using special techniques) as well as a comprehensive step-by-step guide for complete beginners.

Melbourne House is the world's leading publisher of books and software for the Sinclair ZX81.

The following titles are also available if you wish to expand your horizons:

ZX81 ROM Disassembly Part A

This book is for the programmer that needs complete answers about the ZX81. Dr. Logan has examined all routines in the ROM and here he comments on each one. It covers all ROM locations from 0000H to 0F54H, and includes all functions except for the routines used in the floating point calculator.

ZX81 ROM Disassembly Part B

In this companion volume to Part A Dr. Logan covers locations 0F55H to 1DFFH and includes all routines used in the ZX81 floating point calculator. These two books are a must for the experienced programmer.

Not Only 30 Programs for the Sinclair ZX81: 1K —

Not only over 30 programs, from arcade games to the final challenging Draughts playing program, which all fit into the unexpanded 1K Sinclair ZX81 but also notes on how these programs were written and special tips! Great value!

Machine Language Programming Made Simple for the Sinclair —

A complete beginner's guide to the computer's own language – Z80 machine language. Machine language programs enable you to save on memory and typically give you programs that run 10-30 times faster than BASIC programs.

BASIC Course Programs on Cassette —

All major programs in the BASIC Course are available pre-recorded in this set of cassettes.

Understanding Your ZX81 ROM —

A brilliant guide for more experienced programmers by Dr. Ian Logan, this book illustrates the Sinclair's own operating system and how you can use it.

TJ's WORKSHOP

Our monthly pot-pourri of hardware and software tips for the popular micros. If you have a favourite tip to pass on, send it to: 'TJ's Workshop', PCW, 14 Rathbone Place, London W1P 1DE. Please keep your contributions as concise as possible. We will pay £10 for any tips we publish (think how much solder and/or Elastoplast that would buy).

UK101 OUTPUT

This modification allows the ACIA chip on a Superboard/UK101 machine to be used as a single bit Input/Output port.

On the ACIA, pin 5 is the ready to send enable pin. By POKEing location 61440 with 81 and 51, logic at this pin goes high and low respectively. This output facility allows use of the ACIA as an output port without the need for a PIA. It should be noted that the current available is low, and the circuit below ought to be used when driving relays, etc.

The Input side of this arrangement is a little more complex. Cut the track on the component side of the board that is connected to pin 5; it runs under the socket, so either remove the

IC and cut there or trace the track until it emerges from the socket. Connect a 4.7k resistor to the pin 5 side of the cut, and a positive +5v power line to the other side of the resistor. Then connect the input line to pin 5. Logic high or low is detected by PEEKing 61440, and bit four of this location goes 1 or 0 depending on the state of input at pin 5. If the input side of the above does not function, swap the 4.7k for a 2.7k. There should be no difficulties with the output side, as it is very straight forward.

Below is the circuit for the enhanced output port. This will drive a small relay, tape recorder, light, etc.

R Wells

MBASIC TIP

In your February issue P H Elliott points out how to duplicate MBasic lines with control-A. There is another very useful technique akin to this. When testing a program, a syntax error can be corrected and the program continued without restarting, as follows:

1. The program is run and halts with an error in, say, line 550.
2. Edit mode is entered automatically.
3. Enter Q. Edit mode is exited, without altering the statement in error or losing variable values.
4. Enter control-A. State-

ment 550 will appear in direct mode, without a line number.

5. Edit the line to correct it, without re-entering a line number.

6. Press RETURN, and the statement will execute in direct mode.

7. Enter GOTO 560 (assuming this is the next statement in sequence), and the program will continue.

Note that it will still be necessary to correct the statement in error before saving the program, but this technique can save debugging time.

Brian Hebbes

MICROTAN EPROMS

If you own a Microtan 65 with Tanex the following modification will allow you to run several EPROMs from one of the EPROM extension sockets. You will be able to switch between these using a software or hardware switch. I am currently running three EPROMs in this expansion board and I have found no problems whatsoever.

As can be seen from the circuit diagram the EPROMs are connected in parallel except for CE and OE. To enable any one chip at a time these two lines are taken low. If any other EPROM has its outputs enabled at this stage you will fry these instantly. To make sure that this does not happen I used a 74LS139 which is a 2-4 line decoder. This ensures that only one EPROM is selected at any one time. This 2-4 line decoder is connected to one of the spare ports on Tanex, allowing software control of which EPROM is being selected. The useful thing about this is that on reset EPROM 0 is selected. I have used this modification to allow me to use two different versions of Toolkit (one high-res, the other sound).

The following circuit assumes that 2716 EPROMs are used and that you are not

using more than three in parallel. If you wish to use more I suggest that you buffer the address bus to avoid loading it too much.

The circuit was built on veroboard and connected to EPROM socket E2 and bits 0 & 1 of port 1 B.

The following pins of the EPROMs are simply connected in parallel.

pin	function	pin	function
1	A7	24	Vcc
2	A6	23	A8
3	A5	22	A9
4	A4	21	Vcc
5	A3	20	see text
6	A2	19	A10
7	A1	18	see text
8	A0	17	D7
9	D0	16	D6
10	D1	15	D5
11	D2	14	D4
12	Vss	13	D3

All the address and data lines are connected together in parallel. Pins 20 and 18 are connected together. When these lines are taken low the chip is selected. From every EPROM these lines are taken to one of the outputs of the 74LS139. The enable pin on the 74LS139 is connected to the CE signal that comes from Tanex. I used a 24 pin connector cable which was plugged into socket E2.

R Lienfellner

6k ROMboard circuit diagram

UK101 NEGATIVE SUPPLY

Most RS232 interface devices require that the signals from the computer can swing negative with respect to ground. This often means that an extra negative supply must be provided.

To save the expense of an additional transformer and the need to find space for it inside the case of my Compukit I have used a negative supply generator which operates off the 5 volt supply of the Compukit. This can be built on a small piece of veroboard and will fit into any small available space.

The circuit used was as shown in Figure 1. This consists of a transistor switched on and off by the TXCLK signal available at IC68 pin 11. When this transistor is off, capacitor C1 charges to about 4.5 volts through resistor R3 and diode D1. When the transistor turns on, the positive end of C1 is taken to 0 volts while the negative end is at -4.5 v.

If the voltage on C1 is more negative than the voltage on C2, diode D2 will conduct to allow capacitor C2 to charge up and C2 will end up with a voltage of about -4 volts on it.

If the link at W10 on the Compukit is broken and the supply now available from the junction of C2 and D2 is connected to J3 pin 7, a check with an oscilloscope connected between J3 pin 2 and J3 pin 1 will show that when data is being output from the serial port J3 pin 2 will go from about +4 to -4 volts.

I have used this modification on my Compukit to allow me to drive a TI Silent 700 terminal and a TRS-80 Line Printer VII. With neither of these has there been any problem of corruption of data during transfer.

A parts list indicating typical component values is included as Figure 2.
R A Shackelford

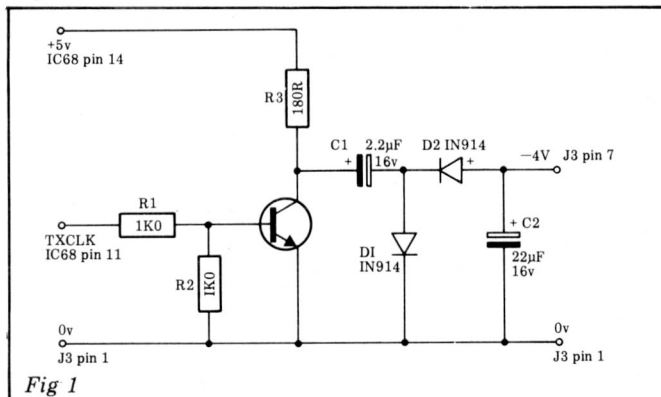

Fig 1

Item	Description	Value
R1	Resistor, carbon film	1K0, 5%, 1/4W
R2	Resistor, carbon film	1K0, 5%, 1/4W
R3	Resistor, carbon film	180R, 5%, 1/4W
C1	Capacitor, tantalum	2.2uF, 16Vdc.
C2	Capacitor, tantalum	2.2uF, 16Vdc.
D1	Diode, silicon, small signal	1N914
D2	Diode, silicon, small signal	1N914
TR1	Transistor, small signal, npn	BC182

Fig 2

ZX81 POKE

While PEEKing and POKEing on my ZX81 recently I discovered an easy way to obtain a 34 column display (as opposed to the usual 32). The effect is obtained by POKEing 16441 and 16442 with the values 20. The following program illustrates this. When the program

ends or is interrupted by BREAK, to return to normal mode press NEWLINE.
10 POKE 16441, 20
20 POKE 16442, 20
30 GOTO 10

Other interesting effects can be obtained by POKEing the two addresses.
Richard Gosling

MZ80K BACKUP

It is unfortunate that Sharp does not provide information to aid making a back-up copy of its tape Basic interpreter, SP5025. This is, however, quite simple, using the enclosed program.

The procedure is as follows:

1. Load Sharp Basic SP5025 in the normal way.
2. If you have Knights Commander, load that too.
3. Load the copy program,

as a normal Basic program.
4. Run the program and, at the prompt, insert a blank cassette, positioned to record.
5. Press any key on the keyboard to continue and, at the next prompt, press RECORD & PLAY.

The interpreter will now record, and this recording can now be loaded from the monitor in the normal way.
Clinton Evans

PRINTING TO 3 DECIMAL PLACES

Basic normally prints numerical values less than 0.01 in the exponent form 1.23E-03. This can be annoying and untidy if you are listing a table of figures where the third decimal place is needed (eg, dimensions in mm or thou or prices).

To overcome this I developed the short subroutine below, which can be inserted into the program where the number is to be printed. A sample run is shown to demonstrate the improvement to the format.

Sample program

(Line 20 is for print enhancement)

```

10 INPUTN
20 IFN<.01THENPRINT
  ".00";CHR$(48+INT
    (N*1000+.5)):GOTO40
30 PRINTN
40 GOTO10

```

1E-03	.001
5E-03	.005
.054	.054
.543	.543

D Gayler

APPLE SCREEN BUG

With most TV/monitors the Apple produces half-intensity dots at certain points on the screen. This occurs with colours 5, 6 and 7 and is apparent in both b/w and colour. The only system, known to the author, in which this doesn't occur is an Apple with Sony TV and special Sony colour card. To assess whether this problem occurs with your system try program 1 which produces three half-intensity dots and then changes them to full intensity. If the dots remain unchanged then your system has no problems and you need read no further. To see how annoying this problem is run programs 2 and 3. The problem in plotting the point X, Y only occurs in a limited number of situations. Namely:

1. HCOLOR = 5, X odd and X+1 divisible by 7.
2. HCOLOR = 6, X even and

```
10 HOME : TEXT : HGR

145 HOME
150 VTAB 21: PRINT "NOW WATCH THE LAST DOT"
160 PRINT "AND PRESS THE 'SPACE BAR'": GET AS$
170 HPLLOT 100,100: REM THERE SHOULD BE NO
    CHANGE SINCE PLOTTING IN BLACK"
180 END
```

Program 1

```
10 HOME : TEXT : HGR
20 HCOLOR= 6
30 HPLLOT 48,0 TO 244,0 TO 244,100 TO 48,100 TO 48,0
40 HPLLOT 52,20 TO 230,20 TO 230,80 TO 52,80 TO 52,20
50 END
```

Program 3

- X+1 divisible by 7.
3. HCOLOR = 7 and X+1 divisible by 7.

Normally the remedy is to set HCOLOR = 4 (ie, black) and then to plot the point X+1, Y in black. Thus program 2 can be corrected by adding the lines:

```
35 HCOLOR= 4: HPLLOT
14,1 TO 14,150: HCOLOR= 5
65 HCOLOR= 4: HPLLOT
49,1 TO 49,150: HCOLOR= 6
105 HCOLOR= 4: HPLLOT
98,1 TO 98,150: HCOLOR= 7
```

The remedy for program 3 is similar. Add the lines

```
42 HCOLOR= 4: HPLLOT
245,0 TO 245,100
44 HPLLOT 49,0 TO 49,100
46 HPLLOT 231,20 TO
231,80.
```

Note that if HCOLOR = 7 is used in program 3 instead of HCOLOR = 6 then the given correction produces two small black dots at 49,0 and 49,100. This can be corrected by changing line 44 to:

```
44 HPLLOT 49,1 TO 49,99.
```

This problem is caused by a fault in the Apple's plotting routines. Since this can be corrected in Basic then the machine code routines could also be corrected. Let's hope that Apple will correct this most annoying fault.

Dr G A Manson

VIDEO GENIE SEARCH

This program allows the user to determine which lines of his program contain any Basic keyword or any other form of text string. Also an indication will be given (by line number repetition) of how many times the search key was found on each line.

```
2 CLS: DEFINTI-L:
L=PEEK(16634)*256+PEEK
(16633)-4: K=17133:
FORI=K-5 TO: IFPEEK
(I)=0: N=PEEK(I+4)*256+
PEEK(I+3): I=I+4: NEXTI:
ELSEFORJ=K TOK+20:
IFPEEK(J)=38: NEXTJ:
ELSEIFPEEK(J)=0:
PRINTN: : NEXTI:
ENELSE IF PEEK(J)<>
PEEK(I+J-K): NEXTI:
ENSELSENEXTJ: NEXTI:
END
```

When typing the program use ? instead of PRINT other- wise the ND of the final END will have to be inserted using the Edit mode. This is because the keywords are not tokenised until after the line has been entered and the line is too long until this has taken place. Using the ? means that less initial text is entered.

Line number 1 is also required by this program to create the search key. This is used in the following manner:

The search key may be any basic keyword or any text not including a keyword, eg, 1 PRINT 1 SPIDERS 1PRINT"SPIDERS.

But note the problem if the search key is 1 TARGET — GET is a Basic keyword, hence the word TARGET will not be found. To overcome this problem the text may be shortened or the special character (&) used, eg, 1 TARGE or 1 TARG&T. Keywords split by blanks are the same as those not, eg, GO TO is the same as GOTO but GOTO24 is not the same as GOTO 24.

Note: & is reserved for use as follows:

1. Immediately after the line number of line 1, to separate a numeric search key from the line number. This must be used for a numeric search key to avoid accidental deletion of a line in the user program — eg, 1&24 will create a search key for 24, while 1 24 will delete line 124 if it exists.
2. Following an extra blank after the line number 1 to

enable a blank to be used as the search key — eg, 1 &.

3. In any other position the character in a search key occupied by the & will not be checked. Therefore, & can be used in place of any character to disallow a keyword or if the spelling of a word is not known exactly.

Line 1 may contain any data for the search key and does not have to be in correct Basic syntax. This line is not intended to be run.

There are some restrictions with this routine:

1. The user program must start at a line number greater than 2.
2. The search key must not exceed 20 characters (although keywords may be counted as only 1).
3. The search program and search key line will occupy up to 190 bytes.

After the search key line is entered simply enter RUN 2. To run the user program enter RUN number, where number is the first line number of the user program. Alternatively, replace line 1 by 1 GOTO number then RUN will access the user program directly.

Each time the search key is found, the line number of the line containing the search key will be printed starting at the top left corner of the screen. The line number will be printed each time the search key is found, therefore the number of times the line number appears indicates how many times the search key occurred on this line. Approximately 12 line numbers are printed for each line of display.

Complete Sinclair ZX81 BASIC Course

At last, a comprehensive text for your Sinclair ZX81! The complete BASIC Course is a manual which will immediately become an indispensable work of reference for all your ZX81 programming.

Whether you have never done any programming or whether you are an experienced microcomputer user, the Complete BASIC Course will provide an invaluable aid.

Not Only 30 Programs for the Sinclair ZX81: 1K –

Not only over 30 programs, from arcade games to the final challenging Draughts playing program, which all fit into the unexpanded 1K Sinclair ZX81 but also notes on how these programs were written and special tips! Great value!

Machine Language Programming Made Simple for the Sinclair –

A complete beginner's guide to the computer's own language – Z80 machine language. Machine language programs enable you to save on memory and typically give you programs that run 10-30 times faster than BASIC programs.

ZX81 ROM Disassembly Part A

This book is for the programmer that needs complete answers about the ZX81. Dr. Logan has examined all routines in the ROM and here he comments on each one. It covers all ROM locations from 0000H to 0F54H, and includes all functions except for the routines used in the floating point calculator.

Understanding Your ZX81 ROM

A brilliant guide for more experienced programmers by Dr. Ian Logan, this book illustrates the Sinclair's own operating system and how you can use it.

BBC BASIC APPEND

BBC Basic has no explicit APPEND statement to allow selected procedures to be added to a program from a library.

Here is a routine which allows repeated appending of Basic statements (complete programs or library sets of procedures) by loading the programmable function keys, f0 to f8, with a sequence of instructions and messages. You work through the keys from left to right and repeat the sequence as often as required for multiple appending. Step-by-step instructions are designed to give the user, at all times, a screen display containing the next action to be taken and a reminder of which key to press next.

Before using the program, a little thought regarding the line numbers of the statements to be appended will prevent ambiguities in the resulting programs. The highest line number of the first set of statements must be lower than the first line number of the second set, since the program does not merge but only appends. However, the first step in appending, loaded on key f0, can force a renumbering of the first set (from 1 in steps of 1). Similarly, key f3 is loaded with an instruction to renumber the second set from 10000 in steps of 1, and, to repair the odd appearance that this would give in the final version, the appended statements can be collectively renumbered, using key f8, from 10 in steps of 10. After the APPEND program is run to load the keys, and before any of the keys have been pressed (or subsequently between key presses if required), keys f0, f3 and f8 can be reloaded to any convenient renumbering system desired by the user. The chosen renumberings are designed merely as default values.

The APPEND program is loaded and run, setting LOMEM to the high end of memory in order to protect a small section of RAM, for the instruction strings to be called down later by the function keys — the only variables used by the program are the static variables in the range A% to Z%. The orange function keys are left loaded for subsequent use and the

first set of instructions is displayed on the screen. These tell the user to load the first set of statements (referred to as Program 1, but not necessarily a complete and executable program), to renumber using f0 if required, and to press f1 for the next set of instructions.

Loading the first set of statements is done by the user with the usual LOAD "" or LOAD "name"; this statement can not be put on a function key since the quote symbols terminate the *KEY statement. However, leaving this step to the user has the advantage that the correct name of Program 1 can be incorporated in the LOADING. Note that this action also deletes the APPEND program, but by now the subsequent actions are all stored on the function keys and the APPEND program has no other part to play. The ESCAPE and BREAK keys don't actually clear the keys if one of these is pressed by accident.

If Program 1 is to be renumbered, f0 is pressed when loading is complete.

When key f1 is pressed and immediately before the next set of instructions is displayed, PAGE is set to TOP+256 to move 'user memory' above program 1. (The BBC manual is misleading here since it gives a programming example of PAGE = TOP + 1. This is highly unlikely to move PAGE above TOP, since the Basic interpreter strips the lowest two bytes from PAGE to force it to a 'hexadecimal hundreds' boundary.)

The instructions now displayed tell the user to load Program 2 (again, it may be an executable program or just a set of procedures or statements) which is done by a LOAD "" or LOAD "name" as before. Since BBC Basic programs are stored in a fully relocatable format, the statements will be positioned in memory from the new value of PAGE, even though they were saved from the normal program location (starting at &0E00 in a tape-based Model B).

Key f2 is now pressed for further instructions.

Key f3 may be pressed for an optional renumbering of Program 2.

Key f4 brings up the next set of instructions, but before they are displayed the length of Program 2 is stored in L% for use in the appending stage, and PAGE is reset to its original value (stored by the APPEND program in P%).

Key f5 resets TOP for Program 1 by executing an 'OLD' command — TOP is not a variable but a function, and cannot be directly reset by storing its old value, as PAGE can.

Key f6 brings up the final set of instructions and executes the FOR...NEXT loop which successively PEEKs the values from Program 2 and rePOKEs them at the end of Program 1, resulting in what, on the Nascom2, would be an 'intelligent copy'. That means that, unless Program 2 is very short, the appended programs will eventually overwrite Program 2, but, by the time they do, the overwritten part of Program 2 has already been safely transferred.

For those who like to know how their Basic programs are stored, the BBC interpreter uses the following format (all in hex, of course): 0D AA BB NN (statements with reserved words tokenised) 0D (where AA BB is the hex representation of the line number, and NN is the number of bytes in the line, expressed in hex, the whole program being termi-

nated with one hex byte, &FF, following the last &0D).

Key f7, which must not be pressed until the command prompt > reappears, resets TOP for the appended program. If this step is omitted, TOP still refers to Program 1 and any attempt to list or run the appended program will result in the obdurate message 'Bad program'.

Pressing f8, the final key in the sequence, renumbers the appended program from 10 in steps of 10. This may be necessary even if the earlier renumbering options were not exercised.

Finally, if further programs or sets of statements are to be appended, the APPEND program itself need not be reloaded, as the function keys still retain the necessary information and the instruction strings remain at the high end of memory. The final instructions will have reminded the user to commence the sequence again from f1 (or f0 to renumber the appended program from 1 in steps of 1), the appended program now being 'Program 1' and the new material to be appended, 'Program 2'.

PET GET

I have been writing some games programs on my PET and have been having some trouble with the keyboard input. The GET function cannot detect a key that is being held down. How can I get the PET to recognise this?

D Harrison, St Helier, Jersey

Fortunately for games writers, the keyboard on Commodore computers is controlled by the operating system. It is possible to bypass these functions and directly find out the state of the keys. This is best done in machine code programs but the Basic operating system has some useful locations which may be examined. As an example look at location 152; this will normally be 0, but while the shift key is pressed it will be 1. If this is not enough, then location 151 shows which key is being pressed down. You can use GET to detect a key being held down. Try including in your GET loop the statement: POKE 151,255. This will confuse the machine into thinking that the key was previously released. This can be used to construct a simple screen editor with auto-repeat keys in Basic. I'll leave you to work out how to start the repeat after a preset time, at a defined rate.

Mark Wratten

BBC monitor

I am due to take delivery of a BBC Computer any day now. Would you recommend that I purchase a monitor rather than use a TV?

D O'Brien, Whitstable

The answer depends entirely on what you want to use it for, how good quality your present TV set is, and whether you wish to use colour or black and white. The BBC Computer will be unsuitable in its 80-column mode with an ordinary TV set. Also, some black and white sets have difficulty when the BBC displays are in colour. I have had reasonably satisfactory results using my home Sony colour TV, whereas many other people using other sets find the picture very bad. The answer is also dependent on your finances, because colour monitors are still rather expensive. Two sources that you might like to try for a colour set are Gadney Electronics 179 Torridon Rd, Catford,

London SE6 (01-697 0079) and Micro Vitec Ltd, Futures Way, Bolling Rd, Bradford, BD4 7TU (0274 390011). Black and white monitors are very easy to come by and are getting cheaper by the month — just look through PCW for ads. A good monitor is a joy to use, mainly because it reduces eyestrain. BEEBUG (National Independent BBC Micro user group, PO BOX 50, St Albans, Herts, AL1 2AR) is currently negotiating discounts for members on monitor sets.

Beeb delay

I ordered a model A BBC Computer two months ago and have not received it yet. What is causing the delay, and when should I expect my machine? Can you tell me if it is possible to increase the memory to 32k without upgrading the machine fully, which I will not be able to afford?

K Jackson, Catford

As you may have read in the computer press some time ago, there have been production problems with the BBC Computer. The biggest problem has been caused by the ULA chips made by Ferranti Ltd. These are custom-made integrated circuits that replace a vast number of logic gates and reduce production costs and machine size considerably. The problem arose because, while the prototypes worked okay, only a small fraction of the production-run ULAs functioned at the required speed (16 MHz for the model B!). The problem is apparently not totally resolved, and Acorn has told us that when ULAs are tested many are still rejected, and the remainder are sorted for A and B machines; with model As getting lower grade ULAs. This has implications for the last part of your question.

Before we get on to that, one or two more points about supply. We talked to a spokesman for Acorn today asking about supply rates, and it would seem that the backlog of model A orders has now been largely cleared, so that a model A machine ordered on 31 March 1982 could reasonably be expected to be despatched by 8 May. The backlog on the model B is somewhat greater, since model Bs have only just begun to emerge (at the time of writing), and model Bs were in the majority among the first 12,000 orders for the BBC machine. Acorn's

prediction for a model B ordered on 31 March gives a despatch date of 12 June. So the supply problems are clearly not yet resolved. Production rates are currently 800 model As per week, and 1000 model Bs, according to our information.

Upgrading the model A to 32k can be done by purchasing a set of eight 4816 dynamic RAMs (100ns) and making an appropriate link change on the main board, but there are two catches for the unwary. Firstly the cost of 4816s varies considerably. One retailer is advertising a BBC Computer upgrade for £55. In our view you should aim for around £25, and there are one or two retailers with suitable 4816s at this price. But there is a further problem to the would-be upgrader — the ULA in the A machine may not be fast enough to run the higher graphics modes with the memory upgrade and Acorn has said it will only release the higher grade ULAs in full upgrade kits to dealers. There is not space here to go into this issue fully, but it is treated in the April issue of the BEEBUG newsletter, along with full notes on memory and printer upgrading. Moreover, BEEBUG is pressing Acorn to change its stance on this question.

D E Graham, National User Group for the BBC Computer

Loading problems

I have had three ZX81s that have given me tape loading problems. I want a more reliable micro and have used a CBM PET that has a VERIFY command which seems a very useful feature because it reduces the risk of tape load errors. Is it available on other micros and what are the problems with cassette loading?

B W Moore, Stockton, Co Cleveland

You are quite right that tape loading problems are both common and annoying. Most of the problems can be traced back to a mismatch between the signal from the micro or back to it, or to what is called the 'azimuth' adjustment of the recording head in the tape deck. The read and record heads each have a very narrow gap between the poles of the magnet that records or the soft iron core that senses the recording on playback. If these gaps are not exactly at right angles to the line of movement of the tape, the signal is blurred

unless the recording machine was similarly out of adjustment. This blurring may be bad enough to cause errors on reading the tape even if the signal levels are perfect. I have sometimes only been able to read tapes produced on other machines by forcing down one corner of the cassette or putting a cardboard wedge under one side (a procedure to adopt with caution). Your suggestion that there should be a VERIFY instruction at first surprised me, as I am used to the Nascom machine which has one. It works exactly the same way as the READ routine, except that the characters when read and added into the parity check are not then put into memory. Furthermore, there is also available an intelligent read routine for the Nascom which only transfers a block of data to store if read correctly (on most machines an error in a previously correctly read block will be put into store and will spoil the good data). This intelligent read is in issue three of the Nascom magazine produced by Program Power, of 5 Wensleydale Road, Leeds. (But beware — there is a correction to it announced in issue four.) To return to signal levels — there is nothing I can do to help you to tell the difference between a satisfactory recording and a duff one, except to advise you to find a friendly computer club where you can listen to good recordings that sound clean and undistorted. Another approach is simply to try every recorder you can beg or borrow. It is not usually necessary to use anything of high quality. A micro club may also have someone with a meter who will help adjust any circuits if your machine has adjustments.

Anthony Camacho

Micro shares

I am looking for a package on a microcomputer that will enable me to produce portfolios for clients whose stocks and shares I manage. I am aware that there are packages on mini and large computers but these cost in excess of £20,000. (Name and address withheld by request)

I only know of one such package. This runs on a Hewlett-Packard HP125, which is not the cheapest micro on the market. It runs under CP/M so should be convertible to other micros without too much problem. You do not say how many clients, or how many stocks and shares you wish to handle, as

the limiting factor for most micros is the disk capacity. The package mentioned will handle up to 1500 stocks and shares held by up to 300 clients, although if you reduce the number of clients you can increase the number of stocks held, and vice versa. If a hard disk was used this would increase the capacity tenfold. It handles purchases, sales, adjustments, bonus and rights issues, performs stock analysis, and produces portfolios. The only supplier is Sumlock Bondain Ltd, 263-269 City Road, London N1 (01-250 0505).
Sheridan Williams

All change

I have an extender board for my UK101 which has sockets for four EPROMs. I have configured these sockets for the single-rail 2716. I would like to be able to plug 6116 RAM into these sockets but find that I cannot write data to the 6116.

I have full manufacturer's sheets on the 2716 but the only data I have on the 6116 is a pin-out diagram, which appears to be pin compatible with the 2716 with the exception of pin 21 which needs to be a R/W line. I have coupled pin 21 to a R/W line which is working sixteen 2716s and up to four 2716s without problems, but I thought that it may be overloaded and fitted a 4.7k pull-down resistor. I have tried two 6116s in the socket with exactly similar results, and the 2716 in the same sockets reads out perfectly.

Even more peculiar is the fact that because the 6116s are addressed continuous with the top of RAM, the Basic thinks it has the extra RAM, and shows a free area showing 19000 bytes free, when there are only 16k of 2716s in the machine.

I get the same results whether I run the processor at 1 or 2 MHz. Can you assist?

K P Wood, Wakefield, W. Yorks

The add-on board that you describe sounds like the Elektor 8k RAM plus EPROM board, which I myself have used and I ran into exactly the same problem as you did. The 6116 is certainly static rather than dynamic RAM and, moreover, it is a CMOS device, so its current loading will be minimal, much less than that of a 2716.

The major difficulty is simply a question of pin incompatibility between the 2716 (for which link connections are given with the

particular memory board that you have) and the 6116 (for which no details are given). In fact you have dealt correctly with pin 21, but there is a little track cutting that needs to be done before the switch can be made.

First, isolate each of the pin 18s of the four 2716 sockets, and then simply link pin 18 of each socket to pin 20 of the same socket. The reason for these alterations is that pin 18 of each socket has been earthed, which is okay for a 2716 but not so good for a 6116 or a 4118, where pin 18 is in fact the chip select! It is pin 20 of the 2716 that carries the chip select — hence the need to link 18 and 20. Note that leaving pin 20 of the 6116 connected to the chip select causes no problems.

There is one further catch with this particular board that could try your patience, though you have probably already discovered this. The addressing order of the two EPROM sockets is altered when you go from using four 1k devices (eg, 2708) to four 2k devices (eg, 2716 or 6116). The result is that the addressing order for the 2k configuration is IC 26, 28, 25, 27.

If by any chance you are in fact using a different memory board, there should still be enough here for you to work out a fix for your particular board.

D E Graham

Disk control

After reading the letter 'Corrupted Commodore' in the March issue I thought you might be interested in the disk controller developed at Merchant Taylors' School in Crosby.

Mark Atherton

Mark has sent documentation on a system that allows multi-access to the IEEE bus for a number of PETs, so they may communicate, without interference, with a disk. If the documentation is to be believed, then the system is far superior to the MUPET mentioned in my reply referred to in March. It overcomes many of the MUPET's weak points. It should also be a lot cheaper. If you require further details write to: Mark Atherton, Merchant Taylors' School, Crosby, Liverpool L23 0QP. I would have thought it worth marketing, and it should bring the originator a fair return for his development.

Sheridan Williams

Dates

I was interested to read your comments on a question from Barbara Sanders in the March issue of PCW. She asks how to create a file called DATES.COM which will, when executed cause the Basic program DATES.BAS to be run. I have the following program which

can be assembled using the CP/M assembler and it creates a file identical to the SUBMIT command's temporary work file. Thus when a warm-boot is performed the system is tricked into thinking that it is in the middle of a SUBMIT. To change the follow-on program change the line labelled COM: appropriately.

NEWCOMERS START HERE

This is our unique quick-reference guide, reprinted every month to help our readers pick their way through the most important pieces of (necessary) jargon found in PCW. While it's in no way totally comprehensive, we trust you'll find it a useful introduction. Happy microcomputing!

Welcome to the confusing world of the microcomputer. First of all, don't be fooled; there's nothing complicated about this business, it's just that we're surrounded by an immense amount of necessary jargon. Imagine if we had to continually say 'numbering system with a radix of 16 in which the letters A to F represent the values ten to 15' when instead we can simply say 'hex'. No doubt soon many of the words and phrases we are about to explain will eventually fall into common English usage. Until that time, **PCW** will be publishing this guide — every month.

We'll start by considering a microcomputer's functions and then examine the physical components necessary to implement these functions.

The microcomputer is capable of receiving information, **processing** it, storing the results or sending them somewhere else. All this information is called **data** and it comprises numbers, letters and special symbols which can be read by humans. Although the data is accepted and output by the computer in 'human' form, inside it's a different story — it must be held in the form of an electronic code. This code is called **binary** — a system of numbering which uses only 0s and 1s. Thus in most micros each character, number or symbol is represented by eight binary digits or **bits** as they are called, ranging from 00000000 to 11111111.

To simplify communication between computers, several standard coding systems exist, the most common being **ASCII** (American Standard Code for Information Interchange). As an example of this standard, the number five is represented as 00110101 — complicated for humans, but easy for the computer! This collection of eight bits is called a **byte** and computer freaks who spend a lot of time messing around with bits and bytes use a half-way human representation called **hex**. The hex equivalent of a byte is obtained by giving each half a single character code (0—9, A—F): 0=0000, 1=0001, 2=0010, 3=0011, 4=0100, 5=0101 E=1110 and F=1111. Our example of 5 is therefore 35 in hex. This makes it easier for humans to handle complicated collections of 0s and 1s. The machine detects these 0s and 1s by recognising different voltage levels.

The computer processes data by reshuffling, performing arithmetic on, or by comparing it with other data. It's the latter function that gives a computer its apparent 'intelligence' — the ability to make decisions and to act upon them. It has to be given a set of rules in order to do this and, once again, these rules are stored in **memory** as bytes. The rules are called **programs** and while they can be input in binary

or hex (**machine code** programming), the usual method is to have a special program which translates English or near-English into machine code. This speeds programming considerably; the nearer the **programming language** is to English, the faster the programming time. On the other hand, program execution speed tends to be slower.

The most common microcomputer language is **Basic**. Program instructions are typed in at the keyboard, to be coded and stored in the computer's memory. To **run** such a program the computer uses an **interpreter** which picks up each English-type **instruction**, translates it into machine code and then feeds it into the **processor** for execution. It has to do this each time the same instruction has to be executed.

Two strange words you will hear in connection with Basic are **PEEK** and **POKE**. They give the programmer access to the memory of the machine. It's possible to read (**PEEK**) the contents of a byte in the computer and to modify a byte (**POKE**).

Moving on to **hardware**, this means the physical components of a computer system as opposed to **software** — the programs needed to make the system work.

At the heart of a microcomputer system is the central processing unit (**CPU**), a single microprocessor chip with supporting devices such as **buffers**, which 'amplify' the CPU's signals for use by other components in the system. The packaged chips are either soldered directly to a printed circuit board (**PCB**) or are mounted in sockets.

In some microcomputers, the entire system is mounted on a single, large, PCB; in others a **bus system** is used, comprising a long PCB holding a number of interconnected sockets. Plugged into these are several smaller PCBs, each with a specific function — for instance, one card would hold the CPU and its support chips. The most widely-used bus system is called the **S100**.

The CPU needs memory in which to keep programs and data. Microcomputers generally have two types of memory, **RAM** (Random Access Memory) and **ROM** (Read Only Memory). The CPU can read information stored in RAM — and also put information into RAM. Two types of RAM exist — **static** and **dynamic**; all you really need know is that dynamic RAM uses less power and is less expensive than static, but it requires additional, complex, circuitry to make it work. Both types of RAM lose their contents when power is switched off, whereas ROM retains its contents permanently. Not surprisingly, manufacturers often store interpreters and the like in ROM. The CPU can only read the ROM's contents and cannot alter them in any way. You can buy special ROMs called **PROMs** (Programmable ROMs) and **EPROMs** (Erasable PROMs) which can be programmed using a special device; EPROMs can be erased using ultra-violet light.

Because RAM loses its contents when power is switched off, **cassettes** and **floppy disks** are used to save programs and data for later use. Audio-type tape recorders are often used by converting data to a series of audio tones and recording them; later the computer can listen to these same tones and re-convert them into data. Various methods are used for this, so a cassette recorded by one make of computer

won't necessarily work on another make. It takes a long time to record and play back information and it's difficult to locate one specific item among a whole mass of information on a cassette; therefore, to overcome these problems, **floppy disks** are used on more sophisticated systems.

A floppy disk is made of thin plastic, coated with a magnetic recording surface rather like that used on tape. The disk, in its protective envelope, is placed in a disk drive which rotates it and moves a **read/write head** across the disk's surface. The disk is divided into concentric rings called **tracks**, each of which is in turn subdivided into **sectors**. Using a program called a **disk operating system**, the computer keeps track of exactly where information is on the disk and it can get to any item of data by moving the head to the appropriate track and then waiting for the right sector to come round. Two methods are used to tell the computer where on a track each sector starts: **soft sectoring** where special signals are recorded on the surface and **hard sectoring** where holes are punched through the disk around the central hole, one per sector.

Half-way between cassettes and disks is the **stringy floppy** — a miniature continuous loop tape cartridge, faster than a cassette but cheaper than a disk system. **Hard disk** systems are also available for micro-computers; they store more information than floppy disks, are more reliable and information can be transferred to and from them much more quickly.

You, the user, must be able to communicate with the computer and the generally accepted minimum for this is the visual display unit (**VDU**), which looks like a TV screen with a typewriter-style **keyboard**; sometimes these are built into the system, sometimes they're separate. If you want a written record (**hard copy**) of the computer's output, you'll need a **printer**.

The computer can send out and receive information in two forms — **parallel** and **serial**. Parallel input/output (**I/O**) requires a series of wires to connect the computer to another device, such as a printer, and it sends out data a byte at a time, with a separate wire carrying each bit. Serial I/O involves sending data one bit at a time along a single piece of wire, with extra bits added to tell the receiving device when a byte is about to start and when it has finished. The speed that data is transmitted is referred to as the **baud rate** and, very roughly, the baud rate divided by ten equals the number of bytes being sent per second.

To ensure that both receiver and transmitter link up without any electrical horrors, standards exist for serial interfaces; the most common is **RS232** (or **V24**) while, for parallel interfaces to printers, the **Centronics** standard is popular.

Finally, a **modem** connects a computer, via a serial interface, to the telephone system allowing two computers with modems to exchange information. A modem must be wired into the telephone system and you need British Telecom's permission; instead you could use an **acoustic coupler**, which has two obscene-looking rubber cups into which the handset fits, and which has no electrical connection with the phone system — British Telecom isn't so uppity about the use of these.

IN STORE

I'm afraid that, due to pressure of work, I have been unable to fully update 'In Store' this month. I have however corrected the telephone number of Sinclair — I hope that, in the fullness of time, the lady who has been taking their calls will forgive me!

WHEN IT COMES TO MICROCOMPUTER SOFTWARE WE WROTE THE BOOK

How do you stay up-to-the-minute with the rapidly changing world of microcomputer software? Get the Lifeboat Catalogue.

The latest innovations The new Lifeboat Catalogue is packed with the latest state-of-the-art software. And if we publish a new program after the latest catalogue has gone to press, we enclose a flash bulletin in your copy.

The greatest selection Because Lifeboat is the world's largest publisher of microcomputer software, our catalogue offers you the greatest selection of programs for business, professional and personal use. Our more than 200 programs range from the integrated accounting and professional practice systems to office tools for book-keepers and secretaries to sophisticated tools for programmers. Included are business systems, word processors, programming languages, database management systems, application tools and advanced system utilities.

We specialise in software that runs on most small business computers. Our more than 60 media formats, including floppy disks, data cartridges, magnetic tape and disk cartridges, support well over 100 different types of computer.

Get full service We give the crucial dimension of after-sales service and full support to everything we sell.

That includes:

- An update service for software and documentation.
- Telephone, telex and mail-order services in the London office and at overseas offices in the United States, France, Switzerland, West Germany and Japan.
- Subscriptions to LifelinesTM, the monthly magazine that offers comparative reviews, tips, techniques, identified bugs and updates that keep you abreast of change.

Get it now Lifeboat now serves tens of thousands of satisfied customers with our breadth of up-to-date, fully tested, fully supported and competitively priced software.

You may not need all we offer, but we offer just what you need. After all, we wrote the book.

Now you can add 64K CP/M[®] to your Pet Commodore for only £497,- With the CP/M[®]Maker

It takes only five minutes and £ 497,- to raise your standard Commodore operating level by CP/M and add a hefty 64K RAM.

Not another tag-on box, this module actually plugs inside your present console. No new power supply, no soldering, no fiddling.

Whether you own the 3000, 4000 or 8000 series model you can still add CP/M versatility.

The CP/Maker gives you a massive 96K RAM at your disposal.

The Z80 microprocessor, incorporated in the CP/Maker will also enable you to use your 6502 as an intelligent I/O processor.

Look at all these other CP/Maker advantages:

- Compatible with all CP/M software such as wordstar.
- Compatible with all normal CBM software, including 69K Visicalc.
- The Z80 and 6502 work simultaneously.
- Languages include CB 80 (the fastest Basic compiler for micros), C-Basic, M-Basic, M-Pascal, PL1, CISCobol, Fortran...
- Comes complete with CP/M 2.2 diskette and operating manual.

TRANSACTION FILE

We know when we're beaten! The volume of readers using Transaction File is escalating beyond our resources to cope. Regrettably, therefore, we are increasing the flat fee to £2.50 per advertisement. Each ad must be printed on the form below, using a maximum of 30 words. We cannot accept Transaction File ads unless they are sent to us on this form. (If you don't want to damage your copy of PCW by cutting out the form then please use a photo-copy.) All ads must be accompanied by a cheque or PO for £2.50 made payable to Sportscene Publishers (PCW) Ltd. Ads are accepted only from non-commercial readers. We cannot repeat an ad unless a new form is sent in, nor can we guarantee to place an ad in a particular issue. Ads are printed on a strict 'first-come-first-published' rota basis. Please mark your envelope very clearly: Transaction File (PCW) 14 Rathbone Place, London W1P 1DE. Thank you for your co-operation.

ZX81... 16k RAM PSU (ex cond, both guar), leads, manual, books, mags and 5 cassettes full of exc. s/ware inc. invaders, 3 adventures and many others. £120. Tel: Ware 830735 after 5 w/days & w/ends.

ZX81... 16k, rebuilt in stylish case with proper keyboard. Books on games and machine code. Progs (inc Defender). Worth around £190, only £130. 67 Boileau Rd, Ealing 997-6967.

ZX81... Sinc built, 16k RAM, leads, manual, Sinc cassette, ex cond, only 4m-old, £105 ono. Ring 0945 4555 after 6. Buyer collects.

ZX81... Sinc built, with 16k complete and as new £80. Cassette interface TR1 £5. Four Sinc cassettes and two books £2 each. Five inch b/w tv £40. Tel: 01-668 8541.

PET... 16k new ROM, cassette, toolkit, manual, cover, games and other programs. £450. Tel: Stoke on Trent 0782 618560.

Nascom 2... 32k with toolkit, Naspen, Zeap, graphics, case and full documentation. £400. Tel: 01-883 2182.

ZX81... Sinc built, 16k RAM pack. Leads, selection of books, all hardly used. £110 ono. Please phone Medway 362077 and ask for Mr Bedford.

Superboard II... 8k RAM, PSU, Cegmon monitor, 300/600 baud, soundboard, professionally built, all cased, manuals, s/ware. £280 ono. S Docking, Room G19, Brunel University, Uxbridge, Middx.

Sinc 16k RAM... used twice, boxed with guarantee slip, + 3 superb games on a TDK cassette: Defender, Breakout and Nightmare Park. Only £50 the lot (worth £65). Tel: 01-866 6321 eve.

Microtan 65 + Tanex... full expansion, 8k RAM, Microsoft Basic, XBug etc. In system rack with system Motherboard, Cost £480 will accept £300 ono. Tel: Dewsbury 45 24 24 after 6.

TRS80... LII 16k + VDU, CTR80, printer interface. Lower case mod, T-Bug, Edtasm, dis-assembler, manuals etc. £430. Phone David Fitzgerald 01-836 0386.

Mk 14... SC/MP processor, with revised monitor. Also available training manual with Nat-Senus assembler and applications manuals, + I/O RAM chip and tape interface. £60 ono. Tel: 01 807 4190 eve.

TI59 + PC100 Printer... Exc cond, in box with Master, Maths Utilities and structure, modules, printer utilities and fun, s/ware packettes, charger, case, paper rolls. 90 magnetic cards, complete with all literature. Any test, £230 ono. East Horsley, Surrey, 4239 eve.

Commodore PET. . . 24K plus Computhink discs £650. Tel: Cwmbran 71921.

ACC NEWS

This month, I thought I'd tell you about the ACC Club Affiliation Scheme, whereby your club can obtain a cheap newsletter via the ACC. I have mentioned this before, but the full gory details come this month. But first, here is the news. . .

At a Committee meeting which I was locked out of (inadvertently - at least that's their story and I believe them), the ACC Committee considered changing the ACC's name to remove the apparently taboo

word 'Amateur'. One suggestion was 'National Association of Computer Clubs' or NACC for short - I don't like that since I was brought up knowing that NAK meant transmission error, please retransmit, while ACK meant message received and understood (some bright spark will point out that the ASCII codes are 6 for ACK and 25/21/19 (depending on your favourite radix) for NAK). But seriously, I don't see what's wrong with the name Amateur. I happen to

work as a computer professional but I choose to devote part of my spare time to hobby computing. When I am being a hobbyist, I am quite happy to be an 'amateur'; it is only because the others around me are also doing it for fun that I do it for fun - otherwise I would charge the going rate. I don't really believe that the computer hobbyist exists to be exploited by businessmen who want a machine to do a job. Well there's a nice provocative view. I hope you'll all write

to me and tell me what you think of this issue.

The ACC was at the National Amateur Radio Show at Belle Vue, Manchester on the 4 April, and a good time was had by all (or so our correspondent writes). There were several thousand people there and the crush was somewhat reminiscent of last year's PCW Show at the Cunard Hotel. All sorts of computer and radio equipment was there, including homebrew, surplus and shiny boxes. As the

winners of last year's inter-club quiz, the ACC was punished by having to run the quiz this year (teach our Chairman to be so damn clever). This year it was won by Bury Radio Society, with the other computer club at the Exhibition, the Manchester Computer Club, being sadly knocked out in an early round.

Clubs... if you want space at the next (I think it's the fifth!) PCW Show for your club, then write to: Dr David Annal, 142 Windermere Road, Norbury, London SW16 5HE as soon as you can, as he's sorting out the space in the ACC's area (on which your club may have a stand - if there are any left) very soon. The show will be at the Barbican complex; David has all the details.

I have heard of one new club this month, namely Bottisham BBC Micro Users' Group. The guy to contact there is Mr P M Rank, 27 Bell Road, Bottisham, Cambridge, CB5 9DF. Perhaps they have meetings composing rude letters asking about late delivery...? If you're in that area and have another machine, I'm sure they might consider broadening their horizons to more than just the Beeb machine. There's a Club in Nottingham which seems to deserve a plug, if only because they wrote to me (hint...), the Nottingham Micro-computer Club (Mr K Swainson, 9

Brayton Cres, Bulwell, Nottingham). Our friends in Oxford, OPeCC (Oxford Personal Computer Club) have tugged my sleeve again, to point out that they're taking off very successfully, with a recent large speaker meeting on computer music. Contact: Tim Fowler, 39 Charles Street, Oxford. The membership fee is £8 per annum, including affiliate membership of the ACC (see below). I hear a rumour that a full barrel of crude oil will be accepted as payment for a year's subscription.

I have frequently informally described the ACC full affiliation scheme (which has been taken up by North London and Oxford Clubs, since its somewhat tentative launch a few months ago), whereby a club pays a much reduced subscription to make all its members ACC affiliate members, and the club uses the ACC's newsletter *ACCumulator* as its own newsletter by the simple insertion of a flysheet. This enables the club to take advantage of the ACC's large and therefore cheap print runs; it will often be cheaper for a club to affiliate then to produce its own newsletter, plus there are the benefits of ACC affiliate membership. To show you exactly what is meant, I will give you the text of a sample set of terms for our imaginary friends the West Somewhere Computer Club.

of each club's application for full affiliation will differ widely, and that each application will have to be treated as a special case. In particular, it may be possible to reduce the costs for very large clubs.

1. The ACC shall provide W Somewhere with one copy of each issue of *ACCumulator* published during the currency of this agreement, for each paid up member of W Somewhere, plus a margin of 5% to cover honorary members and the like.

2. The individual members of W Somewhere will become affiliate members of the ACC, and will be granted the following rights and privileges: a) A copy of each issue of *ACCumulator*, supplied to W Somewhere as in (1) above and distributed by them; b) Eligibility for members' special offers; c) Use of the ACC libraries.

Affiliate members are not allowed to vote at ACC General Meetings.

3. W Somewhere will pay to ACC, during September 1982, the sum of two pounds 75 pence for every paid up member of the club. This sum is to be reviewed according to the ACC's costs for each annual renewal of this agreement.

4. Special provisions exist for those members of W Somewhere who are already individual members of ACC. These members will continue to remain full members of the ACC, but the ACC will pay to W Somewhere the sum of one pound 50 pence per such member as a discount. The ACC feels that it might be appropriate for the club to pass such sums on to the members concerned. Those ACC members who are paying at the concessionary rate of two pounds per annum shall not attract the discount.

5. W Somewhere shall be responsible for notifying the ACC of the names and addresses of its members. The ACC will assign each affiliate member an individual membership number, which he should use when applying for special offers or using the libraries. The ACC will also provide W Somewhere with labels for the distribution of *ACCumulator*, should W Somewhere wish to distribute any or all the copies by post.

6. The ACC will promote W Somewhere at any exhibitions or other events attended by ACC. It is hoped that W Somewhere will assist in this by providing publicity material.

7. W Somewhere will notify the ACC Membership Secretary of the names and addresses of new members of the club during the course of the year, and include their capitation fee of two pounds 75 pence (or whatever sum shall be agreed in the future in (3) above). The ACC will include a set of back numbers of the current year's *ACCumulator* for the new affiliate member in the next mailing of *ACCumulator* to W Somewhere.

8. The ACC will provide each affiliate member with a membership card.

9. These provisions apply for the year 1982/83 (1 Oct to 30 Sept), ie, *ACCumulator* Volume 10. The W Somewhere membership shall initially be as on 15 August 1982, but subject to increase under item (7) above.

Terms of Club Affiliate Membership

These terms are applicable only to the agreement between the Amateur Computer Club (abbreviated herein ACC) and the West Somewhere Computer Club (abbreviated herein W Somewhere). Whilst they may be a guide to the kind of agreement with other clubs, the ACC realises that the details

USER GROUPS INDEX

Here's an update of changes and new clubs. Full listing in July.

INTERNATIONAL

EZUG: Educational ZX users' group. 1982 sub £2 (UK), £2.50 (Europe), £4/\$8 (rest of world). Bimonthly newsletter, ZX Directory £1. 16k RAM £32.50 (UK). Contact: Eric Deeson, Highgate School, Birmingham B12 9DS.

PPC (Personal Programming Centre): Worldwide group of Hewlett-Packard calculator & computer users. The 1st and largest calculator user group in the world. 5-weekly journal - good source of hardware & software advice. For sample issue & other information send 8x12 SAE with 2 int reply coupons (or 20z US postage) to: PPC, 2545 West Camden Place, Santa Ana, CA92704, USA.

Amateur Computer Club, 2650 Library. 2650 related data and

assistance only. No newsletter or meetings. Still alive & kicking following a rather quiet 1981 in which Roger Munt (contact) moved house. New address: Tyn-Y-Coed, Kilnwood Lane, South Chailey, East Sussex BN8 4AU. Tel: (0273) 400347.

NATIONAL

Amateur Computer Club. National Organisation with seminars, local group meetings. Bi-monthly newsletter 'ACCumulator'. Fee £4.50. SAE to: Rupert Steele, St John's College, Oxford.

BEEBUG: BBC Micro Independent User Group. Regular magazine with programs feature in each issue, hardware tips, software library, advice and reviews. Discounts on hardware, software, maintenance and books. £4.50 half year, £8.50 full. BEEBUG, PO Box 50, St Albans AL1 2AZ

Atom User Group. Quarterly newsletter, software library, technical help whenever possible. Some local groups. Membership £4 pa. Contact Peter Frost, 18 Frankwell Drive, Potters Green, Coventry CV2 2FB.

Church Computer Users Group: There are a few people already interested in starting one. Are there any others? Teaching programs, humn choosers, agendas, addressers etc. ZX81, BBC Micro and others. For information SAE to Nigel Hardcastle, 112 Rotherfield Road, Birmingham B26 2SH.

VIC User Club & Software Library: soon to be formed. Library contributions welcome - all tapes returned & programs paid for. SAE for information to: Matthew Stibbe, The Lawn, Lower Woodfield Road, Torquay Devon.

REGIONAL

Gwent Amateur Computer Club. Anyone in the South Wales area interested contact Ian Hazell, 50 Ringwood Hill, Newport, Gwent NP1 9EB (SAE appreciated) or phone Rotheray Harris on Newport 852924. Meetings at St May's Church Hall, Stow Hill, Newport on Thursdays from 8pm.

North West TRS-80 User Group. Monthly Meetings, bi-monthly newsletter, software library, sub-groups and more. Will exchange newsletters with any other TRS-80 group. Contact: Melvyn Franklin, 40 Cowlees, Westhoughton, Bolton BL5 3EG. Tel: Westhoughton 812843

Strathclyde Computer Club. Meetings 3rd Wednesday monthly at Strathclyde University, Wolfson Centre, 106 Rottenrow. Contact: Brian Duffy, 24 Lomond Drive, Condorrat, Cumbernauld G67 4JW.

USER GROUPS INDEX

COUNTY

North Wilts Computer Club.
Meetings at Holt Village Hall,
2nd & 4th Wednesdays monthly.
Entrance fee 50p to non-
members. Speakers welcome.
Contact: Matthew Jones, Pinhills,
Bowood, Calne, Wilts SN11 0LY
or Gary Hawkins, 198 The

Common, Holt, Trowbridge.

TOWNS

Edinburgh ZX User Group.
Meetings 2nd Wednesday
monthly, Claremont Hotel,
Claremont Crescent, Edinburgh,
from 7.30pm. Also Saturday
workshops & outings arranged.
Newsletter, software library.
Membership £3 for children.

students, OAP and unemployed.
£5 otherwise. Contact: Keith
Mitchell, 19 Meadowplace Road,
Edinburgh EH12 7UJ (031 334
8483) or John Palmer 031-661
3183.

Leicester Apple User Group for
Help & Support (Laughs) —
affiliated to BASUG. Meetings
now at the Winstanley Arms, The

Glade, Narborough Road,
Leicester. Contact: Hazel Brown,
7 Bude Drive, Glenfield,
Leicester LE3 8BA (0533 875
253).

HULLFORTH

This new Forth compiler for NASCOM I/II is now also available for TRS-80 Level II and Video Genie

HULLFORTH

is a structured high level language which runs over 10 times faster than BASIC.

- Runs in under 16K
- Supplied on cassette with full documentation
- Nascom users please quote NAS-SYS or NASBUG

Hullforth is a Nascom approved product.

Price - £25

Send SAE for further information to:

Mr A.F.T. Winfield,

148 Goddard Avenue, Hull, HU5 2BP

LEISURE LINES

by JJ Clessa

We must have got it about right this time. 128 entries came in, with 92 correct. For those who couldn't manage the problem (or didn't get it right) the largest number whose prime factors add up to exactly 100 is $2^2 \times 3^{22} = 7,412,080,755,407,364$. This month's winner is from Northern Ireland - Jim Henry of Belfast. Congratulations, Jim. By the time you read this you should have received your prize.

Quickie

No answers, no prizes. How is it possible to be on board an ocean liner halfway

between Newfoundland and Ireland, and yet to be only two miles from the nearest land?

Prize puzzle

Tadpoles cost 59p each. Terrapins cost £1.99 each, tortoises cost £2.87 and turtles £3.44. £100 exactly has to be spent on the purchase of 100 of these creatures. How many of each one can be bought?

Answers, on postcards only please, to: June Prize Puzzle, PCW, 14 Rathbone Place, London W1P 1DE, to arrive not later than June 30 1982.

PROGRAMS

PCW is interested in Basic or Pascal Programs for any popular micro - please tell us which one you wrote your program on and how much memory it uses.

Make sure your programs are fully debugged before you send them in on cassette (although we will accept disks) with a clear listing on plain paper. Documentation would be welcome, and if you want it returned please label everything with your name and address and include an SAE. Send contributions to Maggie Burton, PCW Programs, 14 Rathbone Place, London W1P 1DE

RML Altered Basic

by H Pyle

This program will search and alter the Basic command table in RML's 12k Basic interpreter. This is done by scanning the table (located between addresses 8702 and 9148) into an array, program uses roughly 2k and the I\$ (), for the commands and I () for their locations. The new command is entered, converted to upper case and checked against the contents of the array until a match is found.

If LIST is replaced by a string of numbers (eg 1234) the command is effectively disabled as the computer will interpret this as a line number. The program uses roughly 2k and the variables another 2k so with the 12k interpreter this program requires 16k to run.

The actual interpreter used is Extended Basic VSID from RML.

VIC-20 Large Characters

by M Ahmed

Using this program should provide VIC users with some insight into how to make full use of VIC's graphics. It will display chosen characters in magnified form on the screen. Characters available are the alphabet, all ten digits, &, *, £, \$ and mathematical signs. Graphics characters themselves cannot be reproduced using this program.

Input is requested by a large flashing cursor, and characters are displayed simply by pressing the appropriate key. Deletion is done by backspacing.

For use on PET computers the following modifications are all that are needed; in line 106 change T=T-4 to T=T-5; in line 240 change T=T+4 to T=T+5; line 140 should be IF T>38 THEN PRINT "QQQ": T=Q (here 'Q' is in inverse video).

An inverse 'R' and '-' in this listing mean inverse on and off respectively. An inverse heart is the symbol for clear screen. 'Q' reversed is cursor down and a circle (inverse) is cursor up.

Listing courtesy of Lasky's.

```

Architects Surveyors Builders

2 Serious Programs for the ZX81 (16K)

Gives the U Value and enables Wet and Dry temperature drops to be plotted through composite wall and roof constructions.

Works for any construction and for both flat and pitched roofs. Demonstrates the risk of interstitial condensation and shows where it will happen.

Allows the speedy comparison of various types of construction and shows whether they comply with the Building Regulations (April '82 Revision).

Fully documented.

SOFTWARE

TRS-80 MODEL I LII AND GENIE

CLUSTER CONFLICT is a one player space strategy war game. A large fleet of Alien Ships has invaded Human Space, can you survive long enough to defeat them and time itself? Very tough wargame needing thought and planning. At the higher levels each game can provide many hours of battle. Gamesave is included to allow return to family life. A snip at "£11.80" needs 16k. SYSTORE is a m/Code package that will save you money by producing copies of your expensive software. Will copy m/Code and basic programs (with variables) and write any Ram block to tape. SYSTORE programs can be loaded in different memory locations to avoid clashing with resident programs. Check your system with the RAM DIAGNOSTIC provided. No knowledge of M/Code needed, full instructions supplied. An essential addition to your library at £12.90, 16k and 4k versions. GAMESAVER is a m/Code program that loads below basic text for use with programs that need all 16k of memory, ie DUNIONQUEST series. Full instructions to allow GAMESAVER S to return as if they never left. Hellfire warriors can now return retaining Dunjon position, magical items, character, treasures etc, one continuous quest. Get the best from your complex games for only £4.95. All items are double recorded on high quality cassettes and are guaranteed. All prices include VAT & postage, please state computer system. Send cheque/PO to

J.K. Gosden (Software - W).
13, Ashted Common,
Ashted, Surrey KT21 2ED.

ACORN ATOM USERS

Get your programs into EPROM and throw away those slow cassettes! Our EPROM PROGRAMMER will get your BASIC and machine code programs into 2716, 256 (2K), 2532, 2732, 2732A (4K), EPROMs under full software control. The board comes fully built and tested, complete with zero insertion force socket, EPROM containing control software, and full documentation (needs 28v supply). PRICE £29.50. POWER SUPPLY to provide 28V (sorry, only supplied with programmer). PRICE £19.50. CARD takes 4 x 2732 EPROMs (not supplied), comes assembled and ready to plug in. PRICE £19.50. 16K EPROM/ram card, takes any mix of 2716 EPROMs and 6116 CMOS RAMs (not supplied). PRICE to be announced. All of these boards can be supplied to connect direct to your Atom socket or into our MINI MOTHER BOARD which has one two row and four single row connectors, and is compatible with Acorn built modules. PRICE £19.50.

Available soon, A to D and RS232 interface cards. All prices are fully inclusive, terms are CWO. Send SAE for further details of specification and options available, to: DEIMOS 4 Gravelly Hill, Ekington Rd, Birmingham, Pershore WR10 3DB

New Books for the Apple II "The Power of Visicalc" — a tutorial and reference manual for Apple's most powerful software tool. Essential reading for users and potential users. £7.95

"6502 Assembly Language for the Apple II" by Randy Hyde — The best assembly language tutorial for Apple users, written by the author of the LISA assembler. Also covers the SWEET-16 interpreter. £10.95

"Beneath Apple DOS" — the ultimate reference manual on the workings of DOS. Essential reading for every Apple owner. £11.20

"DOS-Source 3.3" — also by Randy Hyde. A complete, annotated and labelled disassembly of DOS 3.3, as a text file on a 3.5 diskette. You can customize DOS to your needs by modifying this source code, and re-assembling using LISA!! £29.95 inc VAT and post.

"What's where in the Apple" — an atlas for the Apple. Now you can find out what those PEEKS and POKES DO!!! £10.95

Add 75p postage per book.

MICROMART

NASCOM SOFTWARE

We offer the following quality software for NASCOM systems:

NASPAS — a 12K PASCAL compiler which produces Z80 code directly. i.e. no P-code. The compiler offers floating point and integer arithmetic, arrays, sets, strings and all major Pascal statements together with fully recursive functions and procedures with value and variable parameters. The object program runs very quickly.
Price: £35.00.

NASMON — A new monitor for NASCOMs. Occupies 4K and includes a sophisticated screen editor, a 'front panel' mode, blocked and buffered tape routines and powerful debugging commands. Price £30.00 in EPROM

BAS12K — a 12K BASIC interpreter offering 11 digit precision arithmetic, PRINT USING, IF... THEN... ELSE and other advanced features. Price: £25.00

NASGEN — a fast 3K assembler generating a full symbol table and with many assembler directives and commands. Price: £15.00 on tape. £25.00 in EPROM.

NASDEM — a 2½K disassembler which interfaces to NASCOM's front panel to produce single step disassembly. Optionally it produces labels and o/p may be directed to a text buffer suitable for NASGEN. Price: £10.00 on tape. £15.00 in EPROM.

All the above software runs under NASMON except NASPAS which can run under NASMON or NAS-SYS.

FREE: a free CHES program with every order of NASMON.

GEMINI DISK OWNERS: HISOFT offer a Z80 development package to run under CP/M 1.4 on the Gemini Floppy Disk System. Included in the package are:

- a powerful screen editor.
- a fast Z80 assembler with conditional assembly.
- a debugger based on the Front Panel on NASMON together with a labelling Z80 disassembler. All this for the inclusive price of: £50! Send for details NOW.

Full details may be obtained from:

ZX81 MEMORIES with a DIFFERENCE

ANNOUNCING THE END OF THE FLOPPY RAM PACK! - Now, for the first time, all you need to fit up to a full 56K of low power memory INSIDE your ZX81 (as is normal with more expensive personal computers), is a screwdriver. Experience has shown that the two commonest causes of ZX81 memory add-on failure are:

1. Lack of rigidity in the connection to the expansion port.
2. Inadequate regulated power supply.

Both these problems have been overcome with our low power, internally fitted INCREMENTAL and MAXIMEM memories.

INCREMENTAL 1.2

The truly expandable memory system that starts you off at a price you can afford but places no restrictions on your future expansion.

● **EASY TO FIT** - The uniquely designed board plugs straight in to the existing microprocessor (CPU) socket on ZX81 board (See page 162 of ZX81 manual) so, following the instructions provided, you simply open up the ZX81 case, unplug the CPU and plug it into the memory board, then plug the memory board into the vacant CPU socket. Four additional slots fit through existing holes in ZX81 board to give high rigidity/reliability. Simple to follow instructions makes child's play of fitting (and removing).

● **TRULY EXPANDABLE** - Expandable up to 16K bytes in increments of 2K simply by plugging in memory chips - but does not stop there! Plug and socket switches allow running in conjunction with external memory add-ons - e.g. with Sinclair 16K RAM pack to give up to 32K and with 32K and 48K packs to give up to 48K and 56K (max pos) respectively. Full instructions provided.

● **ULTRA LOW POWER** - A full 16K takes typically less power than existing 1K Sinclair RAM (about 40mA).

● **ECONOMICAL** - Incremental 1.2 with one 2K chip giving 3K of RAM costs only £16.43 (plus V.A.T.) and you won't have to throw it away when you want more memory.

● **MONEY BACK GUARANTEE** - Return within 14 days of receipt secures full refund of price of goods.

Introducing the new

MAXIMEM 1.1

The ZX81 microprocessor can address a maximum of 64K of memory directly. More than this would require frequent additional statements in programs to switch between different memory banks. 8K of this 64K is already taken up by the Sinclair ROM (containing the Operating system program and Basic interpreter) thus leaving a maximum RAM capacity of 56K (= 64K-8K). The MAXIMEM 1.1 attains this upper limit in one bound by utilising the latest in high density, ultra low-power memory. Board design is similar and fitting identical to the Incremental memory described above.

Orders and enquiries to: East London Robotics, Finlandia House, 14 Darwell Close, East Ham, London E64BT. Or call us on 01-471 3308.

VIC-20 Trailblazer

by Bob Chappell

This is a colourful, fast-moving game in which you and the computer both draw different-coloured trails about the screen for as long as possible without colliding with part of either trail or going back on your own trail. The game is played in rounds, the first (either VIC or user) to win 10 rounds being the overall winner.

Trailblazer is a game which needs fast thinking and quick reactions. The computer makes a worthy adversary even at the slowest trail speed (the program includes speed options). Full playing instructions are presented at the beginning of the game.

Listing courtesy of Lasky's.

The (MZ-80K) Next to Last One

by Simon Pack

This is a fascinating piece of programming which will generate subroutines for adding pretty titles to other programs. It is not so much for its actual use as for its interest value that I have chosen it. The NTLO will actually generate listable code from instructions

input via the keyboard (namely title characters and shade). Using the program is self-explanatory.

A final point worth mentioning is the author was a mere 13 years of age when the program was written.

```

MICROMART

ZX 81

CASSETTE ONE (£3.80)

11 programs for 1k ZX81, 7 of them in machine code.

CASSETTE TWO (£5)

10 games in Basic for 16k ZX81

CASSETTE THREE (£5)

8 programs for 16k ZX81:

STARSHIP 'TROJAN'

Fix your starship, despite hazards including radiation, asphyxiation, and escaped biological specimens.

STARTREK

PRINCESS OF KRAAL

An adventure type game.

BATTLE (1 to 4 players)

KALABRIASZ (strange card game)

CUBE (Rubic cube simulator)

SECRET MESSAGES

Send your messages in code.

MARTIAN CRICKET

Addictive and VERY fast machine code game.

Recorded on quality cassettes, sent by first class post, from:

Michael Orwin, 26 Brownlow Rd., Willesden, London NW10 9QL

Some of this software is also available from: K.J. Software, 8 Cawse Street, Elizabeth Field, South Australia 5113; and Electronic and Commercial Services, Ermou & 8 Fokionos, Athens, Greece

TO ADVERTISE IN MICROMART RING

631-1433

A.I.M RESEARCH

Good software needn't cost the earth.

XFORTH

Highly praised version of Forth-79 with many enhancements.

AMETHYST

Professional word processing software by Mark of the Unicorn. Available now or soon for many Systems including CP/M, CP/M 86 and Unix.

THE WORD

The best spelling checker yet the cheapest.

We will try to beat any advertised prices. Dealer enquiries welcome.

No.20 Montague Road, Cambridge CB4 1BX
Tel: 0223 353985

PET BUSINESS SOFTWARE

ANALYSED CASHBOOK £95

Cash, Bank, Vat, Net entered, computed and analysed for posting to nominal & personal ledgers. An essential business tool. (3 programs).

WORDMAIL £45

An inexpensive word processor including mailing list generator. For reports or letters: justification feature. (2 programs).

DATASTAX £30

Keyboard/video/tape/disk/printer: data transfer in any logical direction. Store and recover any data you want.

Add 15% VAT. State machine, printer, disk unit.

PO Box 12

MZ-80K Tarot
by D Boylen & B Harvey

by D Boylen & B Harvey

All in all, this is a well thought out and executed program and makes quite decorative viewing. The program itself uses 25.86k leaving 8.82k free after loading on top of Basic SP5025. It will, therefore, require a 48k machine to run.

MICROMART

PET HI-RES

The new HR-40 board offers —

- 8k of its own RAM
- 64,000 individually addressable points
- 320 by 200 resolution
- machine code utility software in EPROM
- existing PET features unaffected
- easily fitted, no soldering necessary
- low price of £149 plus VAT

There's no limit to what you can do when you have the HR-40 board fitted to your PET. The single dot resolution allows you to draw smooth curves, accurate diagrams and much more. If you've got one of the new 4000 machines with a 12 inch screen then you'll need the HR-40B, but it won't cost a penny more.

The HR-80 board for the 8032 is now available at the same low price £149.00 plus V.A.T.

SUPERSOFT are PET/CBM software specialists. Other top quality products include MIKRO, the assembler in a chip (£50) and SUPERCHIP, the biggest selling British chip (£45).

Our catalogue is available free to PET owners.

ZX81 WITH 16K RAM-PACK

6 GAMES ON CASSETTE
FOR ONLY £3.50 (Post free)

Not one, not two, but SIX exciting games on one high-quality cassette, ready to load on your ZX81 with add-on 16K RAM pack. Easy to operate, fun to play! Hours of entertainment for all the family!

*THE MONSTERS OF DRARGOOL Enter the underground labyrinth of Drargool at your peril. Risk death fighting the many weird and fierce monsters in your search for treasure.

*SNAIL RACE Back the snail you fancy in each of four races — unless you lose your shirt first!

*GUNFIGHT Shoot it out across a canyon with three desperadoes. Get them all before they get you!

*ROULETTE For two players against the ZX81. The classic casino game, with eight different betting options and simulated wheel-spin.

*BATTLESHIPS The schoolboy game brought up to date. How good a naval gunner will you be?

*ONE-ARMED BANDIT Your own "fruit machine" on the TV screen. "Hold" facility and constantly-updated screen display of your progress.

All the above games have informative and attractive screen displays with none of the unpleasant "screen-flashing" that spoils some other ZX81 games. Get your cassette of six games today!

SEND TODAY! MONEY BACK IF NOT DELIGHTED!

Price includes cassette, library case, inlay, documentation and postage.

Send £3.50 cash/PO/cheque to:

MICROMART

Great products from Mutek

Tiny PILOT

Mutek's Tiny PILOT (MTP) is a small-scale yet comprehensive implementation of the PILOT text-oriented programming language for OSI and UK101 computers.

Commands are: R: remark; T: type text (or graphics character); ?: accept name; A: accept answer (numeric or alphanumeric); M: match (full range of comparisons); J: jump to label; U: use subroutine at label; E: end subroutine; C: compute (26 single-character variables); I: input numeric value to variable; P: produce random number; S: stop (end program)

Numeric functions are performed in 16-bit unsigned form, giving a range 0-65535. A full line-editor is included in the package.

Note: MTP uses CEGMON facilities extensively and will not operate with non-standard monitors such as WEMON or MONUK02. MTP is available as a package with the relevant version of CEGMON at a special reduced price. This gives you the special facilities of CEGMON as well as the best use of MTP.

The EPROM package is available ex-stock, and comes complete with fitting instructions, manual and reference card.

PILOT package £17.50+VAT

PILOT/CEGMON

package £29.50+VAT

StarLink

Communications package

A complete comms. package for OSI systems, including:

'Smart terminal' mode for link to external mainframe, mini or micro; half-duplex/full-duplex operation; transmit/receive prepared text or files (on-line/off-line preparation); direct upload/download of programs; 'indirect file' handling for transfer of programs/data between external computer, disk or ROM BASIC; full editing; and many other features

Available in EPROM in two versions:

StarLink I for disk or ROM BASIC systems, and StarLink II for non-disk operation of Superboard Series II. Specify type required when ordering!

Starlink (either version) £17.50+VAT

Coming shortly

Modem (acoustic coupler) for use with StarLink — c.£50 or less

High res (256×256) graphics for Superboard/C1 — bare board + instructions, software c.£35, ready-built c.£110

FigFORTH (full Forth Interest Group implementation) in ROM — c.£50, source listing c.£15

Come in on the home computer boom.

For £1,000 we can provide you with an agency selling home computers into an exciting new market with massive growth potential — and give all the training, technical and marketing support required. Now's the time to stake your claim and secure your future in your own exclusive territory. And you could start part-time. For further information write with full details to Russel Price, Adda Computers Ltd., Unit 8, I-7 Broomfield Road, West Ealing, London W13 9AP.

ZX81 MONOPOLY

Occasionally during the life of a Micro a program is written that can go on to become a standard. ZX81 MONOPOLY could be such a program. Most computer simulations are solitary affairs using a program that caters only for one or two players. ZX81 MONOPOLY allows six players to compete with the machine doint all the boring bits, acting as board, rule-book, umpire, dice-thrower and accountant. No cheating is allowed and when required a list of a plyers properties and the development situation for each can be listed. No need to worry about missing the rent either, you ZX81 is also trained as a rent collector. The program is well driven by a clear MENU at the start of each players turn and after the dice has been thrown ZX81 MONOPOLY also allows the game to be SAVED with a WINNER so far report. The program requires 16K RAM and comes complete with instructions. Let all your friends and family appreciate the ability of your ZX81 NOW. ZX81 MONOPOLY for 16K at £8.00 inc VAT and postage. Cash with order from the publishers.

WORK FORCE

ZX81 SOFTWARE

DATABASE

Amazingly versatile program allowing the creation of files of any description: anything from stock-control to employee records, and more. Features include add, delete, update, print, sum, count, average and security lock. Supplied with detailed documentation and tape containing two samples files. Excellent value at only £10.

BUDGET/ADDRESS-BOOK

BUDGET will record all your income/expenditure for home or office budgeting.

ADDRESS-BOOK maintains a list of names, addresses and telephone numbers. Uses machine code for fast access. Both programs for only £4.

Educational programs available, including WORDSTORE, QUIZPACK, FUNCTION PLOT, STATISTICS.

Send SAE for full details of these and other programs to

ZX81 X 8 Bit Parallel Interface

Features 16 user programmable input/output lines under your control. Use it to control School Experiments Heating Robots Printer Lighting

Many more applications. Example software and circuit suggestions supplied with each board.

APPLE A/D Converter

Reads 8 analogue channels with 8 bit resolution. Bipolar inputs. Turns your Apple into an eight channel data logger/chart recorder/oscilloscope. Supplied with notes and software (Specify DOS 3.2, 3.3 or Cassette), in an attractive ring binder.

APPLE Universal Printer Interface/Real Time Clock

Clock gives time/date to tenth sec. and interrupt. Interface includes software to drive most common printers. (Can also be used as 8 Bit port.)

ZX81 Card 16.50 + 2.48 V.A.T. + 30p p.p.p.
APPLE A/D Converter 49.95 + 7.49 V.A.T. + 1.00 p.p.p.

ELCOMP BOOKS and SOFTWARE

For ATARI - PET/CBM - OSI - 6502

8K Microsoft BASIC Reference Manual

Authoritative reference for the original Microsoft 4K + 8K BASIC developed for Altair and later computers including OSI, PET and TRS-80.

Order-No. 141 \$9.95

Expansion Handbook for 6502 and 6802

S-44 Card Manual describes all of the 4.5 x 6.5 44-pin S-44 cards incl. schematics. A MUST for every KIM, SYM- and AIM-owner.

Order-No. 152 \$9.95

Microcomputer Application Notes

Reprint of Intel's most important application notes including 2708, 8085, 8255, 6251 chips. Very necessary for the hardware buff.

Order-No. 153 \$9.95

Complex Sound Generation

New revised applications manual for the Texas Instruments SN 76477 Complex Sound Generator. Circuit Board available (\$8.95).

Order-No. 154 \$6.95

Small Business Programs

Complete listings for the business user. Inventory, Invoice Writing, Mailing List and much more. Introduction to Business Applications.

Order-No. 156 \$14.90

The First Book of Ohio Scientific

Introduction to OSI computers. Diagrams. Hardware and software information not previously available in one compact source. 192 pages.

Order-No. 157 \$7.95

The Second Book of Ohio Scientific

Very valuable information about OSI microcomputer systems. Introduction to OS-65 D and OS-65U Networking. Hardware and Software hints and tips. Systems specifications. Business applications.

Order-No. 158 \$7.95

The Fourth Book of OHIO

Very Important Programs Many interesting programs for OSI computers. Sorting (Binary Tree), Differential Equations, Statistics, Astrology, Gas Consumption, Games a.o.

Order-No. 160 \$9.95

VIP Package - Above book plus a cassette with the programs

Order-No. 160 A \$19.95

Invoice Writing Program for OSI-C1PMF, C4P, Disk and Cassette, 8K RAM.

Order-No. 8234 \$29.80

Mailing List for C1PMF or C4PMF 24K RAM

250 addresses incl. phone number and parameters on one 5 1/4 Disk

Order-No. 8240 \$29.80

Programs for the Challenger C1/C2 8K

Order-No. 2004 "Bare Bones" Wordprocessor \$9.95

Order-No. 2005, "Bare Bones" Mailing List \$9.95

Care and Feeding of the Commodore PET

Eight chapters exploring PET hardware. Includes repair and interfacing information. Programming tricks and schematics.

Order-No. 150 \$9.95

ELCOMP Publishing, Inc.

53 Redrock Lane, Pomona, CA 91766

Phone: (714) 623-8314

Payment: Check, Money Order, VISA, MasterCard, Eurocheck.

POSTPAID - PREPAID in USA. \$ 5.00 handling fee for C.O.D.

All orders outside USA: ADD 15 % shipping. CA add 6 % sales tax.

ATARI is a registered trademark of ATARI INC.

PET/CBM is a registered trademark of Commodore Business Machines.

Important Software for CBM

16K/32K

Most powerful Editor/Assembler for Commodore CBM 16/32K on cassette. Assembler can be started directly from editor or from the TIM-Monitor. Translates in three passes. If an error is encountered, automatic return to the editor. Cassette with DEMO.

Order-No. 3276 \$39.00

MONJANA/1 Makes Machine Language Programming Easy!

In every Commodore CBM there is a spare ROM socket waiting for it's MONJANA/1. The new MONJANA/1 Machine Language Monitor in ROM offers more user guidance and debugging aids than any other monitor available today. Comprehensive manual included.

Order-No. 2001 SPECIAL PRICE \$49.00

JANA-Monitor on Cassette for the PET. Similar to MONJANA/1. Very powerful.

Order-No. 2002 \$19.95

Programming in Machine Language with the Commodore PET

This book includes EDITOR/ASSEMBLER, MONJANA, JANA, EDITOR, ASSEMBLER, LINKER and DISASSEMBLER, HEXDUMP and complete descriptions of the programs.

Order-No. 165 \$19.95

BLANK CASSETTES

Highest Quality C-10 cassettes. Blank Cassettes (Quantity 10)

Order-No. 8095G \$4.99

ATARI OWNERS TAKE NOTE:

EPROM-BURNER für ATARI 400/800.

Bare boards only with description, schematic + software (2716, 2732).

Order-No. 7041 \$99.00

Invoice Writing for very small business with ATARI 400/800 16K RAM.

Order-No. 7022, cass. \$29.85

Order-No. 7200, disc. \$39.99

ATARI-BASIC - Learning by Using

A new book with programs and learning exercises. Many of the programs are appropriate for beginners as well as experienced computer users. (Screen Drawings, Special Sounds, Keys, Paddles + Joysticks. Specialized Screen Routines, Graphics and Sound, Peeks and Pokes and special stuff).

Order-No. 164 \$9.95

ATMONA-1 Machine Language Monitor for the ATARI 400/800

This powerful monitor provides you with the firmware support that you need to get the most out of your powerful system. ATMONA-1 comes on a bootable cassette. No cartridges required. Disassemble, Memory Dump HEX + ASCII, (Change Memory Locations, Blocktransfer, Fill memory block, Save and Load Machine Language Programs, Start Mach. Lang. Progr. (Printer Options)).

Order-No. 7022 \$ 19.95

ATMONA-2 Superstepper

A very powerful Tracer to explore the ATARI ROM/RAM area. Stop at previously selected address, Opcode or operand. (cassette)

Order-No. 7049 (includes ATMONA-1) \$49.95

EDITOR/ASSEMBLER for ATARI 800, 32K RAM

Extremely fast and powerful Editor/Assembler. (8K Source-code in about 5 seconds) includes ATMONA-1. (cass.)

Order-No. 7098 \$49.95

MACRO-Assembler for ATARI-800, 48K RAM (cass.)

Order-No. 7099 \$89.00

ZX81 FLEXI SCREEN SUPERSROLL

These two amazing machine code routines, called by USR, will greatly improve your display by allowing you to selectively process any area of screen - INSTANTLY!

Firstly, DEFINE WINDOW, which may range from any single Print position to the whole of the screen. Then, to process ONLY within your defined window, SELECT OPTION.

FLEXISCREEN allows you to work within your window on only the character set (ignoring graphics/spaces) or on everything and enables you to:-

- REVERSE - turns any character to its opposite video
- NORMAL - turns any inverse video into normal video
- INVERSE - turns any normal video into inverse video
- CLEAR - remove any character

This allows a total of eight options.

SUPERSROLL allows you to scroll, up or down, ONLY the text within your defined window and can set the print position at the start of the blank line. FLEXISCREEN and SUPERSROLL are mutually compatible i.e. work within the same window or may be used independently. Absolute simplicity in use and a MUST for any ZX81 user (> 3% RAM). Think of the possibilities - flash words/ areas of screen, prompts highlights, games, scroll columns, underscroll headings etc. etc.

1K FLEXISCREEN - Don't be left out 1K owners! the 1K version allows all of the facilities of its big brother except the defined window and the 'all character' clear, i.e. seven options.
FLEXISCREEN and SUPERSROLL - £3.75 each, £6.50 both.
1K FLEXISCREEN - £2.50

Make cheques/p.o.s payable to:- J. Towers, 381a Foxhill Road, Sheffield S6 1BG

Meanwhile, Chris Horseman was looking at the lighter side of computing.

As a games designer, I was particularly interested to see what was new on the games scene. The vast majority of new American games fall into the 'arcade' category, although the original fervour for producing copies of 'Space Invaders' has largely died down. Most games producers have finally come around to the idea that arcade games need to be in machine language. We are thus seeing better use of graphics and a generally more professional standard of quality. There are still more games available for the Apple than for any other system, though this is largely due to the time it has been on the market. Most of the top games are now being converted for the Atari (eg, Raster Blaster and Apple Panic), but these conversions do not usually take advantage of the superior graphics capability. There is still much copying of ideas for games with a sort of 'goldrush fever' surrounding Pacman. I saw perhaps ten versions, each with their own strong points and improvements but still copies. This has finally aroused some copyright action from Atari who bought the rights for the game from the designers. There have already been some minor court proceedings over Pacman but no one has been successfully sued yet.

There were some excellent new games on show and some people are beginning to stand out as producers of games software. Possibly the most noticeable of these was Scott Adams Inc, who had a large mock castle set up in the windows. Scott has a large (and still growing) range of software available for all of the popular machines including his increasingly famous adventures. These have been recently enhanced on the Apple by the addition of colour graphic illustrations and a 'voice track' which can be used if you own a Vocoder. The graphic adventures should soon be available for the Atari.

Nasir Gebelli's company Gebelli Software Inc is one of the newer US software producers, and to judge by the high quality of the games will become one of the majors very soon. Nasir (who I believe used to program for Sirius) is producing a range of arcade type games for the Apple and Atari which should be available in this country soon. The

games include a high quality racing car game for the Atari called Match Racer.

One of the most original games that I saw was the Swashbuckler by Datasoft; this is a simple game but has stunning animation. In the game you control a man with a sword and must fight off a series of piratical and animal opponents whilst descending through the decks of a pirate ship. Swashbuckler runs on Apple II. Datamost also produces a range of other games including the obligatory Pacman-type game called in this case Snack Attack; all Datasoft's programs so far are for the Apple.

Broderbund produce software for the Apple, Atari and TRS-80. This includes an excellent pinball game called David's Midnight Magic for the Apple (and shortly for the Atari); also a very compulsive game called Apple Panic. This is a 'man with a hammer' game, and also involves knocking rampaging apples through floors (honestly!). This is also available for Apple and Atari. Their TRS-80 games are less arcade-oriented and include Galactic Empire and Galactic Trader.

On-line Systems produce highly polished and professional games for Apple and Atari, including Jawbreaker — which is arguably the best Pacman-type game. Mouse Attack is an excellent Pacman-inspired game with additional features such as two-player option. On-line are also producing a version of the arcade game Frogger for the Atari which looks remarkably close to the original. They are also producing a mammoth graphic adventure called Time-Zone which is retailing for a hundred dollars and is reckoned to take over a year to play. (Does this mean that it will be obsolete by the time you finish it?)

Sirius Software produces games for the Apple II with excellent cover art work and some amazing captions on the games. The games don't look bad and were certainly attracting interest from the crowd. Titles include Hadron, Space-Eggs and Cops and Robbers.

One company producing solely for the TRS-80 is Big Five Software, which makes imaginative use of the limited graphics facilities. It produces six games, including Supernova and Robot Attack, which has voice sound.

Automated Simulations continues its EPYX adventure range with Crush, Crumble and Chomp. Datamost was showing an original game called Tumble Bugs (or sometimes Dung Beetles), which uses an unusual 'lens' effect to magnify part of a maze on the screen and has some simple voice synthesis.

Protos

Keyboard is here!

At last! A real, full size keyboard in a top quality case for your ZX 81.

Simply unscrew your ZX 81 printed circuit board from its black Sinclair case and plug into Protos.

FULLY BUILT £64.95 inc. VAT.

- More accurate, faster typing with bigger and real keys.
- 40 colour coded key-tops for easy reading
- Robust, 'big' computer construction
- PCB prepared for more add-ons to come
- New edge connector provided for Sinclair and other manufacturers' peripherals
- Key legends can be changed for future new ROM functions
- Sinclair PCB fully enclosed — and room for much more

If you feel you've outgrown your ZX 81 don't sell it for peanuts and move to another system. Add it to Protos and make your ZX 81 grow.

For details, large SAE, please. For orders add £2.50 post and packing. Cheques to 'From Computing'.

NOT CALCULATOR CORNER

Continued from page 99

character (whatever the size) increments. In text mode the printer can LLIST programs and print manual calculation results as well as program ones.

In GRAPH mode the paper is mapped with a coordinate grid with 220 units on the X-axis across the paper. The origin can be set to the current pen position by the SORGN command and the pen placed anywhere without drawing by GLCURSOR [X,Y]. If a point off the paper is specified, no error results; if neither coordinate exceeds +/-2048, the pen merely stops at its limit. LINE draws between any number of pairs of points, so a whole polygon may be drawn in one statement; its parameters include the colour and any one of 10 styles of dotted and dashed line! RLINE behaves in the same way but draws relative to the current pen position rather than the origin. With these few but powerful and well-conceived commands almost any type of plot can be produced (curves are approximated by polygons with short sides; when the side is less than 10 units the illusion of a smooth curve is achieved. Text can be added to plots, so you can label graphs and diagrams. The whole system works so well that one must be very hardboiled indeed not to emit some sort of 'wow!' on seeing it in action.

The cassette interface function of the CE-150 allows for two recorders, one input and one output, to be remote-controlled by a program so that automatic data processing and storage can be performed, or large segmented programs run with storage of results. The side of the unit sports a 60-pin expansion bus socket for the connection of future peripheral devices.

Documentation

The good news is that most of the manual is written by an American and is in a comprehensible, English-like language for a change. The bad news is that he has a dreadful, coy sense of humour which makes me want to barf, upchuck or otherwise lose my lunch. However, it does cover most of what you need to know with the notable exception of PEEK and POKE and some of the STATUS values. The section on the cassette operations is definitely in the venerable Japanese tradition, with a terse and original syntax which often defies understanding, and the documentation of the 80 error messages often does not correspond to reality; I have seen an Error 203 once or twice. The

program library contains all the old maths and engineering favourites plus a game called 'Mole Banging' which is not in my edition of Krafft-Ebing.

Expansion

Sharp has promised for this year, in addition to an 8k RAM module, an RS232 interface and a touch-sensitive pad with 150 user-definable keys on it. There are rumours as well of a full 132 character wide printer and a video interface. The extensive facilities will probably attract more of an independent software base than previous hand-helds and already MiCROL has announced an enhanced version of its Procos and a package of plotting and charting routines for the 1500.

Conclusions

The PC1500 is a real *tour-de-force* which, at its price of £150, or £375 for the whole system (11k), is going to make life difficult for competitors. For scientific and engineering, or even some business applications which demand portability and sophisticated hard-copy records, it is very attractive. To maximise its appeal in the scientific area, though, some sort of instrument interface would be advantageous and possibly ROM software for complex statistical and other calculations; the design of the machine leaves the road wide open to both of these possibilities. As to its power as an executive toy/psychological weapon, it is bound to cause gaping mouths wherever it is wielded. And it's a hell of a lot of fun to play with, too. **END**

7th West Coast Computer Faire.

Bill Budge's Raster Blaster has been available in this country for some time, but only for the Apple II. This game has just been released for the Atari, although the colours don't come out well on the British television system. Bill received *Softalk* magazine's game of the year award for this game, and I was astonished to see that Bill is only 19, although an old man of the software industry.

On the subject of awards, Chris Crawford, head of Atari's games research group won the Creative Computing game of the year award for his innovative and excellently engineered Atari war game Eastern Front.

The only British contributions to the games software market that I saw were my Darts and Pool produced by Thorn

EMI! These are being distributed by Creative Computing and were drawing a good deal of interest from the crowd.

It's worth mentioning the huge discrepancy in the price of software between the US and the UK. In the US, games prices range between \$12.95 and \$34.95, while in the UK, prices are between £12 and £29. An additional factor in this is that most software in the US is produced on diskette, which is more expensive than the tape used in many cases here. I originally thought that this was a result of shipping costs but even British software is much cheaper in the US. One can only hope that as the market here expands the prices will drop to sensible levels and so reduce the incentive to make pirate copies. **END**

BOOK FARE

Continued from page 110

versus the drive of the technology and marketing forces to override individuality — which is more striking in the end than Kidder's analogy between computers and cathedrals.

His desire to depict West as the hero leads Kidder to allow criticisms to be made but not to be explored. Many problems arose, both technical and personal, which derived from West's personality and management style. In the end he delivered the goods, but a more objective assessment of West would have been fairer.

Finally, Kidder fails to question his own role. Data General let him sit on the project for most of its duration, although it became worried towards the end because of security reasons.

One of the main motivations of the Eagle team was that the project was backed by de Castro and would be seen to a conclusion, when other projects they had worked on had been scrapped.

Obviously, Kidder's presence contributed to that sense of importance and of excitement. This is a relatively minor criticism but I think that the role of the reporter on TV or in written journalism is important when the end product presents itself as an objective report.

My criticisms are therefore on broader issues than Kidder's original objective. And he does at least mention aspects which I feel he did not investigate properly. It is, however, a book well worth reading. And what is more, it is as enjoyable and unput-downable as a good thriller. **END**

BLUDNERS

In the March edition of Calculator Corner it was erroneously stated that the Casio FP-2 is a 'dumb' printer. Subsequent investigation reveals that there is in fact an IC for decoding on the reverse side of the board, in fact the printer works with the 502, 602 and

702 without the FA-2 adaptor being present.

In the April edition of Newsprint we gave the price of the CP/M add-on for the Hewlett Packard HP-87 as £927; this was an error in the press release and the correct price is £354.

PUBLIC APOLOGY

We would like to apologise for our extremely low prices but we can't help it. Our 5 1/4" Library Cases really are only £1.90 each; our MX80/Commodore 4022 ribbons are only £5.95 each; our BASF SSSD 5 1/4" discs are only £15.00 per ten; our Verbatim Datatype SSSD discs are only £17.00 per ten; our 11" x 9 1/2" Listing Paper is only £10.00 per box of 2000 sheets; our mailing labels start from £7.00 per 1000 labels; and we could go on. In fact you would be hard put to find better value for money than ConSup when you need consumables for your computer.

We would also like to apologise for having two of the best 4K Eproms ever developed for the Commodore PET. "BASMOM" is an assembler and disassembler with extended monitor functions including interrupt driven M/C Trace; Hex/Dec Convert; Dump; Screen Dump; and many more. "PLUSDOS" has all the usual functions such as Auto-Number; Renumber; Find; as well as many new ones including Join and Merge new programmes. Both chips reside inside the PET and are outstanding value at £35 each or both for £65. (Dealer enquiries welcomed).

We faithfully promise to continue to give good value and reliable service. We've always sold the Commodore system and now we can also supply the new SIRIUS I — Circle the number below and we'll rush you details. Alternatively, write or phone us today.

 Benchtests: Apple III, Hitachi Peach/Database Benchtest: dBase II/3D Graphics Made Easy/Equation Solving/Calc Corner: fx 602 quirks/Programs: PET Mini-Animate, MZ-80K Catch, Apple Maze, Atari Sums For Kids, ZX81 Book Index, PET Stockmarket, Microtan 3D Rotation, Extra for MZ-80K, UK101 Crossword Notepad.

BACK ISSUES CENTRE

We have a complete selection of all available PCW back numbers in our flashy new Back Issues Centre in the West End of London, just half a minute's walk from Oxford Street (close to Tottenham Court Road tube station). Of course, you could order them from our excellent mail order service using the coupon below, but by visiting in person you save on postage costs. The Back Issues Centre also often has back numbers of PCW on sale which we cannot offer through the mail order service because of shortage of stock. Our receptionists will also be happy to sell you a set of binders or take your subscription. And there's a range of interesting computer books on sale as well.

Drop by next time you're in the West End. We're open Monday to Friday, 10am to 6pm, The address is 14 Rathbone Place, London W1.

COME UP AND SEE US..

PERSONAL COMPUTER WORLD BINDERS

AN EXPANDING BUSINESS!

We heard you!! The size of *Personal Computer World* has been growing at such a rate that our Mark II binders just couldn't keep pace. Twelve issues used to fit very comfortably into a binder, but now it's too much of a squeeze.

Enter our Mark III binder. Bigger and stronger. We've widened the spine to allow twelve issues room to breathe. We've added strength to the back of the binder to carry the additional weight. And we've done it without resorting to the metal rod system of binding magazines . . . a system which causes problems if the rods bend.

PCW Mk. III binders are still attractively bound with the logos of the magazine printed in gold on the front and spine. They keep your back issues of *PCW* in pristine condition and discourage other persons from 'borrowing' your copies. They lie completely flat, even when full, to allow ease of reading and reference. And they come mailed to you in a specially designed protective pack to guard against any over-enthusiasm on the part of the Post Office delivery system.

All in all, they represent exceptional value at £3.95. (A price below that charged by many competing magazines. Indeed, we know of several organisations who keep *all* their back issues of computing magazines in *PCW* binders because of their sturdy construction and their value for money. This is not a practise we can formally condone, but it's flattering nonetheless.) The price covers all postage, VAT and handling. Use the coupon below, or if you do not wish to deface your copy of *PCW*, send your order with remittance clearly written to the address indicated.

Please rush me..... *PCW* Mk III binders at £3.95 each. I enclose a cheque/ PO for £.....

TWO BOOKS YOU CAN'T AFFORD TO BE WITHOUT

SUCCESSFUL PROFESSIONAL AND BUSINESS MICROCOMPUTING

We live in an age of cheap computing power.

For the first time the cost of a computer is within the reach of the small businessman, the professional or the private citizen.

But will your desk top computer be a boon or a curse?

Will it increase your profits or disrupt your workplace?

Success in computer installation depends on taking a logical approach to your task — the Systems Approach; the side of the microcomputing revolution they didn't tell you about.

Desk Top Computing, from the publishers of *PCW*, Britain's largest-selling micro magazine, tells you.

Lyn Antill explains, in language plain enough for the most non-technical user, the secrets of Systems Analysis.

Step by step, this book tells you how to:

Define exactly what tasks you wish your computer to undertake.

Choose the right machine for your present and future needs.

Buy off-the-peg software.

Hire and supervise a programmer when necessary.

Write program specifications tailored to *your* staff and working methods.

Test programs and introduce them into your business with minimal disruption.

Maintain and modify programs.

Also included are several case studies covering the installation of desk top computers in small businesses.

COMPREHENSIVE BENCHTESTS OF TWENTY-FIVE LEADING MICROCOMPUTERS

Here are twenty-five of the most popular micros in the world benchtested to the exacting standards that only *PCW* insists upon before going into print.

We believe that even rival publications here and in the USA will concede that *PCW's* Benchtests have set an industry standard which is now a byword.

Completely updated and revised by Dick Olney, *Benchtest Special* contains 164 pages of fascinating and essential information covering hardware, software, speed of operation, potential, expansion, documentation and conclusions on each machine.

For just £1.50 you can obtain the results of hundreds of hours of Benchtesting by our skilled team of reviewers.

We are not exaggerating when we say that demand for this special issue has been enormous and we advise you to send off now, using the coupon below, before we go out of stock.

MACHINES TESTED INCLUDE:

ABC 24	NEC PC-8001
Acorn Atom	OKI if-800
Apple II	Onyx C8002
Atari 400 & 800	Osborne O1

Hard Disks for the PET

The Small Systems **HARDBOX** acts as an intelligent controller for up to 4 Corvus Winchester drives

- PET DOS 1 and 2 compatibility
- Multi user capability on Corvus Drives
- 16 Megabyte max file size
- 65535 max records per relative file
- Over 2000 files on 5 MB drive

CORVUS DRIVES

Well proven systems with nationwide support and maintenance.

- 5, 10, 20MB capacity
- Up to 4 drives can be daisy chained
- Backup onto standard video cassette using the Mirror unit
- Up to 64 users with the Constellation multiplexer unit.

5MB Corvus drive	£2295
10MB	£3595
20MB	£4495
Mirror back up unit	£495
Constellation	£495

SSE MINI WINCHESTER

The MW-1000 Mini-Winchester is a compact desktop unit that just plugs into the PET-gives you up to 12 Mb of hard disk storage under CP/M or PET DOS or both !!

At the flick of a switch, this amazing unit allows you to have:-

- The whole disk under CP/M (plus 60k of RAM and Z80)
- The whole disk under PET DOS
- Half of the disk under PET DOS and half under CP/M !!

No changes to the PET or ROMS are required - just plug in and go.

Prices include CP/M, utilities, 60K RAM and Z80

SOFTBOX and CP/M SOFTWARE

SOFTBOX allows the PET to run the worlds most popular operating system for micros. Operates with PET floppies and/or a Hard disk system.

Comprehensive range of CP/M software available - ask for our Catalogue.

Softbox	£550
RS232 Option	£45
Corvus Option	£65

IEEE-488 INTERFACES

Comprehensive range for PET and HP-85 e.g. B300 RS232 40 char buffer, full handshake

£186

They said it couldn't be done!

Galactic FIREBIRD

Those ever circling, swooping, diving Firebirds of the famous arcade machines, brought to the micro in Mike Chalk's ultimate achievement—Galactic Firebird

Yes, it's the latest in the Kansas Arcade series, but alas, his last, for Mike has been writing these right back from the original Arcade Invaders, and feels he wants a rest.

The reason being that he has always bettered his preceding program, and feels that with Firebird he has reached a pinnacle.

Many programmers of many machines have tried to emulate the arcade game, Firebird, but nobody, the Americans included, have managed to get the circling, swooping firebirds on a computer. Until now!

It is incredible how the Firebirds peel away, circle around in numerous positions on the screen, then suddenly sweep in to attack, all the while raining down their bombs.

Even if you manage to dodge all their bombs whilst shooting them down, it is as though they realise they will not get you this way, for without warning they'll take kamikazi action and come straight for you!

Then come the Astro Blasters, shooting down a solid energy bolt, to fry you completely, in addition to their own brand of super bomb. Oh, you can fire at them, but a solitary hit will have no effect whatsoever on these nasties.

As though Firebirds and Astro Blasters are not enough, as the game progresses, come the Megon Bombs. With no less than three hits needed to destruct! And you can't dodge them easily either, as their explosions spread.

Scores are kept of course, and there is the now expected realistic sound effects. And—wait for it—it progresses to FOURTEEN levels of difficulty! Mike's last words: "Nobody will ever get there!"

It's **ONLY** available direct from Kansas but at a sensible £9.50 Vat and post paid

For TANDY TRS-80 & VIDEO GENIE

Kansas

As publishers (we do not retail other people's programs) we have absolute quality control and thus give an unconditional guarantee on all our software. And of course all programs are always in stock for our famed return first class post service whether ordered by cheque or credit card. Ask for a copy of our free catalogue, you won't find any 'South Coast' prices there! Access and Barclaycard welcome.

SPRINTER –

*the
faster,
universal
interface*

Mutek

Quarry Hill, Box, Wilts
Tel: Bath (0225) 743289

If you're waiting for your printer to type out that document, and you're bored with waiting for it as usual, we may have the solution for you.

The answer is Mutek's **Sprinter**.

Your daisy-wheel can only manage 50 characters per second at best; but your computer can probably 'print' at two thousand per second or more. With Sprinter between them, your computer can print as fast as it likes; your printer can take as long as it needs, without tying up the computer in the meantime. That's just 15 seconds to dump a 30,000 character document; then continue your work without interruption.

Sprinter is an 'intelligent buffer', capable of storing up to 32K (ten pages or more) of text at a time. No changes are needed to your system or your software – it just plugs in. What's more, you'll only need one Sprinter to connect almost any peripheral to your system – it has RS232 serial, Centronics parallel and IEEE interfaces all built-in (six interfaces in all). So you can use a parallel printer from your computer's serial port, an ordinary modem on your Pet, or almost any other device you want.

Since Sprinter has its own intelligence and memory, it can easily be tailored to your needs. Converting from one interface standard to another; one data format to another; or even both at the same time. Call us today for a new way to solve your interfacing problems.

Prices depend on specification and start at **£185** (exc. VAT) for a 16K Sprinter complete with all six interfaces. And that's much less than the extra cost of a faster printer!

Typeset text from your disks

Unlike some computer-typesetting services you've seen advertised, wordsmiths' Anvil service is ready for you *now* if you use any of the following machines:

Superbrain SD or QD (or any compatible system); *Apple II* under DOS3.3 or CP/M; *Tandy* TRS-80 Model I or III; *North Star Horizon*; *Comart*; or *Ohio Scientific* C2 or C3 series.

(We'll have links to other systems ready by the time you read this advert – ring for details).

We have special software support for *WordStar*, *Spellbinder*, *Scripts* and *Applewriter*: so even tricky jobs such as directories, technical publications, tables and foreign languages are no problem for your word-processor and Anvil.

If you're not sure how to do it, come to one of our *word-processing workshops* and see how we can help you to produce anything from a price list to a batch of bar-code labels.

(And since we're in central Somerset rather than on the Central Line, we might even offer you some cyder and a byte to eat as well!).

– NOW

*Quite simply, we're the specialists in
print for micro-computer users.*

For details of our typesetting, print and other services for the word-processor user, and for dates of our word-processing 'workshops', return the coupon or ring Mike Cooper on 0458 45359.

PROTECT YOUR SOFTWARE INVESTMENT

COPY II PLUS

Apple Copy II Plus gives you the power to make back-up copies of nearly all the "protected" software packages currently available.

INSURANCE

With Copy II Plus you can protect your valuable software investment. Make back-up copies of Visicalc, DB Master, DeskTop Plan, the Apple Special Delivery Software range and many other packages.

RELAX

Copy II Plus allows you to make back-up copies for normal use, so you can keep your originals safely locked away – away from the dangers of spills or stray magnetic fields, or just the wear and tear of everyday usage.

EASILY PAYS FOR ITSELF

While some software companies offer replacement of expensive damaged diskettes, many do not. With Copy II Plus you eliminate the time, expense and worry of costly accidental damage.

FAST

The high-speed option allows you to copy diskettes in less than 45 seconds – faster than any other bit copier – ideal for backing-up your ordinary data disks.

COMPUTECH for apple

Authorised dealer, service centre and system consultancy

SUCCESS BREEDS SUCCESS!

As authorised dealer and service centre for Apple computers we have acquired extensive experience of users' needs and the most cost effective means of satisfying them from the considerable resources of this popular and reliable machine. Over 1,000 of our financial accounting packages have been installed. In the process we have detected areas of special need and opportunities for enhancing these resources. Our own manufactured hardware and system software have been produced to meet these requirements. As a result we have compatible products for all configurations of Apple II and ITT 2020 installations - and the new Apple /// !

Apple /// now on demonstration - systems from	£1,645
Pro-File 5 MB mass storage for Apple ///	£2,256
Computech mass storage for Apple II and Apple ///, up to 12 MB, from	£1,950

COMPUTECH SOFTWARE AND HARDWARE INCLUDES:

Payroll for 350 employees, 100 departments, all pay periods, printed payslips, approved year end documents, very quick and easy to use, **£375**. **Sales, Purchases** and **General Ledgers** **£295** each, detailed statements. **Job Costing** and **Group Consolidation** are amongst many and various applications of the **General Ledger** package, which supports values to totals of one thousand million accurate to a penny! Our **Utilities Disk** available like other packages in 13 sector or 16 sector format, is widely used for reliable, error checking, copying, including single drive, and the renowned **DPATCH** program beloved of

TRS 80 LEVEL II & VIDEO GENIE SPACE GAMES

Assault Course

Lunar Voyager

Space Invaders

Space Pirates

ASSAULT COURSE £7.50

LUNAR VOYAGER £7.50

An authentic 'SCRAMBLE' written entirely in fast, smooth Z80 machine code and complete with sound, 'Assault Course' has no less than 7 sections. You must face Mountains, Dancing Midgets, Meteors, Rockets, Caves and Mazes. You have 6 keys, 4 to move and 2 to fire. Probably the best TRS 80/Genie game we have ever seen.

The most exciting 80/Genie voyage you will ever take. After leaving the command module you must land on the Lunar surface, blast off, dock with the command module, negotiate Asteroid Storms on the return voyage, pass through the atmosphere and then with a spectacular display of graphics land at Houston. You won't make it first time!!!!

SPACE INVADERS £7.50

SPACE PIRATES £7.50

Like 'Assault Course' and 'Space Pirates', 'Space Invaders' is written in machine code. In case you haven't heard the idea is to shoot down aliens before they destroy your shields and laser base and invade earth. A superb version of a classic game. No set of 'Space Games' would be complete without it.

Also written totally in machine code by Frank Johnson the author of 'Assault Course' and also with sound, 'Space Pirates' is something new in Video Games. The idea is to use your weapons to protect your star bases against pirates who are cunning enough to set traps for you. Very good real time action.

THE SET OF FOUR £19.30

USE YOUR COMPUTER (PET, ZX81 and others)
to control an electronic sign. Messages, patterns,
graphics may be stored in the computer and then
made to run from right to left across the sign.

The sign has an L.E.d. matrix that can display two
inch high characters. The length of the sign can be
varied to suit the user.

Programs are available for immediate use on the
above computers. These signs are ideal for shops,
garages, clubs, home etc.

For further information and prices write to the
address below, asking for details of COMPUTER
SIGN.

LOW PRICE HIGH QUALITY SOFTWARE FOR 32K COMMODORE PET

DATABASE £100 + VAT

(For 4032, 8032 or 8096 only)

A complete information retrieval system for office or school administration. Lay out files for dates, numbers, money or other data. Display, update or amend as required.

PURCHASE AND SALES CONTROL £50 + VAT

Runs both purchase and sales ledgers with optional calculation of VAT from the gross or net amount analysis by accounting period, "due for payment" report, totals for net VAT and gross, etc.

INVOICE PRINT £50 + VAT

Prints invoices on your own stationery laid out according to your own instructions. This programme is an optional add-on to be used in conjunction with "purchase and sales control".

STOCK CONTROL £40 + VAT

Keeps detailed stock records including stock location, re-order level, quantity on order, cost and selling prices and stock valuation.

NOMINAL LEDGER £40 + VAT

Produces trial balance and up to 20 reports in addition to profit and loss and balance sheet from up to 1,000 nominal accounts. This programme is intended for use on its own, but it can read files set-up by our purchase and sales control and stock control programmes.

PRO PASCAL - THE MODERN WAY TO PROGRAM

Pascal provides means of structuring both data and code. Pro Pascal is a true compiler, generating programs which make full use of the Z80's registers and instructions.

Fast, compact object code — see published benchmarks

Separate compilation facility allows large programs to be subdivided into manageable segments

For business applications:

- nine-digit integers (32 bits)
- string handling
- sequential and random access to files

For scientific users:

- single (32-bit) and double (64-bit) precision real values
- input/output and all math functions available in both precisions

For system programmers:

- object code is reentrant and ROMable for non-CP/M applications
- assembler-coded modules can be incorporated in object programs

Pro Pascal runs on any Z80 micro with CP/M and at least 52K RAM, for instance:

- Apple + Softcard
- Clenlo Conqueror
- Cromemco (with CP/M or CDOS)
- Digico Prince
- Nascom/Gemini
- NEC PC8000
- North Star Horizon & Advantage
- Pet + Softbox
- Research Machines 380Z
- Sharp MZ-80B
- Superbrain
- Televideo
- Vector MZ
- Xerox 820
- Zilog MCZ

Pro Pascal is developed and supported in the UK. The single-user price is £190 plus VAT. The software package includes disc-to-disc linker and cross-reference generator.

A BETTER WAY TO DO BUSINESS

GREAT NORTHERN Computer Services was founded in 1979 to provide users and dealers of Apple II and CP/M based micro-computers with a source of first-class software, consultancy and support. Since then we have provided software packages, training courses and consultancy to more than 150 leading micro-computer dealers and major organisations like ICI, Plessey, Post Office, North Eastern Gas Board, British Steel etc.

DIAGRAM OF GREAT NORTHERN PACKAGES AS USED BY A SMALL BUSINESS

Amongst the software packages we supply are:-

For CP/M based micro-computers

SALFLOW	Balance Brought Forward type Sales Ledger package	£250.00
OSFLOW	Open Item type Sales Ledger package	£300.00
INVFLOW	Invoicing package	£295.00
PURFLOW	Purchase Ledger package	£250.00
NOMFLOW	Nominal Ledger package	£250.00
STOCKFLOW	Stock Control package	£250.00
BILLFLOW	Professional Client Billing (Invoicing & Sales Ledger) package	£375.00
MINIMODEL	Financial Modelling system	£399.00
DATAFLOW	Database Management and Information Processing package	£ 99.95
MICRO-PICS	Production and Stock Control with Bill of Material explosion	£595.00
BASKAM	Index Sequential routines for use with MBASIC	£ 95.00
MAGSAM	Index Sequential routines for use with CBASIC	£110.00

For Apple based micro-computers

IAS	Inter-Stat Statistical package	£150.00
AMR	Advanced Mathematical routines	£150.00
IFO	Information File Organiser Database Manager package	£120.00
VMD	Video Message Display system	£150.00
MIN	Micro Inventory stock control package	£150.00
MGL	Micro-General Ledger Nominal ledger and accounting system	£150.00
COLOURING BOARD	Paddle drawing & graphics system	£ 75.00

VIC GAMES FROM HI-TECH

YOU'VE TRIED THE OTHERS NOW HAVE THE BEST
Exclusively for the VIC 20 Computer

GAME TITLE	DESCRIPTION	
HEAD ON	Drive round a track — try to avoid the Vic car hitting you head on!	£8.75p
VIC CUBE	Can you solve the Rubic Cube? A great test of skill.	£8.75p
CRAZY BALLOON	Guide the swaying balloon through a prickly path. An addictive game.	£8.75p
MOLE ATTACK	A great game. Quick reflexes are needed to shoot the moles as they pop out of their holes.	£8.75p
BALLOON BOMBER	Destroy the air ships before they drop their bombs on you. An exciting game.	£8.75p
SKIER	Ski down the Olympic run. The better the course you take the faster you go. Try to improve your record each time.	£8.75p
TREASURE CARRYING	Your man wants the loot!! — Get him back alive as often as possible avoiding the hail of arrows. Very funny and addictive game.	£8.75p
SUPER MOON LANDER H. Res Graphics	Make a soft landing on the moon. Watch out for the mountains! You control thrust direction etc. As good as the arcade game.	£8.75p
OTHELLO H. Res Graphics	This is an 8 x 8 board game played with black and white counters. Pit your wits against the computer. Excitement mounts with each move! The last move can win the game!	£8.75p
SPACE SHOOT	Defend the earth from being invaded by fiendish aliens!	£8.75p
I.C.B.M.	Fire a rocket from your battleship! Navigate it through the attacking anti-ballistic missiles to hit your enemy's targets.	£8.75p
INDY 500	Your Grand Prix car is racing against others. You control steering and acceleration. Very good graphics.	£8.75p
SLOT MACHINE	Go for the Jackpot!! Just like one-arm bandits! Very good graphics.	£8.75p
PACK MAN H. Res Graphics	Just like the arcade game! Excellent graphics. Currently the best selling Vic game.	£8.75p
SUBMARINE	Try to blow up the submarines before they sink you. Great fun and good graphics.	£8.75p
GUNMAN H. Res Graphics	Watch out — He's quick on the draw!! Have a gunfight against the gunman controlled by the computer. Great graphics.	£8.75p
NAVAL BATTLE	An exciting game! You have submarines and guns against you. Try to win! It's tough but it can be done!!	£8.75p
SPACE INVADERS	Yes — THE Space Invaders!! Need we say more?	£8.75p
FIRE TREK	Open the force screen on your ship to search for the enemy. When located the ship's computer works out range, energy etc. to help you annihilate them. Amazing graphics!	£8.75p
ALIEN WARS	When in range, your on-board computer locks on target. This game has 'got to be seen to be believed' graphics!!	£8.75p
VIC COVER	Keep your keyboard clean. Dust free.	£2.95p
SUPER-BREAKOUT	A brilliant version of the 'Arcade' game	£7.50p
DEFLECTION	Deflect a fast moving ball to hit a target	£7.50p
CAR DRIVE	Drive your car through a forest track	£7.50p
3-D MAZE (U)	Walk through a maze in 3D & try to find the exit	£7.50p
INVADER FALL (U)	Destroy the invaders before they destroy you	£7.50p
DRAGON MAZE (U)	Can the dragon eat you before you get out of the maze	£7.50p
ALIEN MAZE (U)	Build your force field against the aliens after you	£7.50p
MISSILE COMMANDER	(U) Fire your A.B.M. at I.C.B.M. cutting in to destroy your cubes	£8.75p
3 RAM PACKS	are required for (U) Games. We are giving a FREE GAME with every purchase	£29.50p

COMPUTERS LTD.

A Guide to good British Software

Lesson No. 1 *"What is DMS?"*

DMS is Britain's best selling records management program for micro computers. You can think of DMS as a computerised super-efficient filing cabinet. Nearly 3000 companies, colleges, hospitals and other organisations use DMS to increase efficiency.

"What machines does it run on?"

It runs on all Commodore Machines, plus virtually any micro with an operating system known as CP/M or MP/M. This includes the ACT SIRIUS, the NEC PC 8000, the Rank Xerox 820 or 860, Superbrains, Apples with CP/M cards, the ICL Personal Computer. The Rair Black Box, the Sharp MZ 80B, the LSI M2 and M3, and the Caltext, and all machines with standard 8" disks.

"Who uses it?"

It's designed for use by managers, secretaries and clerical staff. They use it to make life easier by storing their personnel records, their student or patient records, their stock records, library lists, contract records, customer and client records, parts files, property and policy records etc etc.

"How do I use it?"

All instructions are in everyday conversational english, so you need never have used a computer before. Just tell DMS what information you need to store, then type your information on to disk. Once they are on there you really start to reap the benefits. For instance DMS will find an individual records for you to check, amend or print, or it will find all those which meet various parameters handling batches of record faster than you could image possible. It can sort them into any order need print lists, or transfer the information into your wordprocessor (eg Wordstar, Spellbinder, etc) to do selective mailing. (It even gives a little extra help by printing labels to match.) Or it can do some clever calculations. Or print reports, to your own special layouts. Every facility is designed to save you time, remove those tedious clerical tasks and make your organisation more efficient. More than anything, DMS allows you to have all your information at your fingertips as soon as you want it.

"How much does it cost?"

Work on the Commodore version costing around ,290, and the CP/M versions from 0400. Staff can be trained on regular courses run at your training centre, both on DMS and Wordstar.

"What about Lesson No. 2?"

Ring Compsoft Ltd, on Guildford (0483) 898545, or write or visit us at Hallams Court, Shamley Green, Nr Guildford, Surrey GU4 8QZ.

ZX99

AUTOMATIC TAPE CONTROL

The logical extension for the Sinclair ZX81 giving data retrieval & word processing

£59.95
plus P & P

The ZX99 Tape Control system is a sophisticated extension to the Sinclair ZX81 Microcomputer, providing remarkable additional capabilities, which allow both the beginner and expert access to a professional computing system without the expected expense.

★ DATA PROCESSING

The ZX99 gives you full software control of up to four tape decks (two for loading and two for saving) allowing 'mixing' of data files to update and modify them. This is achieved by using the remote sockets of the tape decks to control their motors as commanded by a program.

★ PRINTER INTERFACE

The ZX99 has a RS232C interface allowing you direct connection with any such serial printer using the industry standard ASC11 character code (you can now print on plain paper in upper and lower case and up to 132 characters per line.)

★ MANY SPECIAL FEATURES

There are so many different features that it is difficult to list them all:

For example:

AUTOMATIC TAPE TO TAPE COPY: You can copy any data file regardless of your memory capacity (a C90 has approx 200K bytes on it) as it is loaded through the Sinclair block by block.

TAPE BLOCK SKIP without destroying the contents of memory.

DIAGNOSTIC INFORMATION to assist in achieving the best recording settings.

The ZX99 contains its own 2K ROM which acts as an extension to the firmware already resident in your ZX81's own ROM. The ZX99's ROM contains the tape operating system, whose functions are accessed via Basic USR function calls. Each function has an entry address which must be quoted after the USR keyword. All of the functions can be used in program statements, or in immediate commands (i.e. both statements with line numbers and commands without them).

PETSPPEED

Put some zipp into your programs

SPECIAL OFFER FOR EDUCATIONAL USERS

Volume discount on all orders placed by accredited educational users before 31st October 1982. Consult your local dealer or ring Oxford 49597.

Petspeed compiled programs Just ZIPP through your Commodore computer.

To illustrate the point Oxford Computer Systems (Software) Ltd., have produced an enlightening demonstration disk entitled "Life in the Fast Lane", which gives objective comparisons between Pet Basic, Petspeed and the alternative Basic Compiler.

Petspeed is the only **optimising** Basic Compiler available for any microcomputer, which is only one of its **other** advantages.

FASTER – Petspeed is capable of double the speed of the DTL Basic Compiler and up to 40 times the speed of Pet Basic.

SHORTER PROGRAM SIZE – the size of long programs is considerably reduced.

COMPATIBLE – Petspeed will compile ANY Pet Basic program.

OPTIMISATION – Petspeed is the only optimising Basic Compiler available for any microcomputer, because of its optimisation, programs run much faster.

SECURITY – Your programs belong to YOU. Oxford Computer Systems (Software) Ltd. makes no claim on Petspeed Compiled programs. No key or security device is required for compiled programs and users can build in their own protection. Petspeed code is unlistable and compiled programs cannot be tampered with.

PRICE – we will leave you to compare prices.

Also available **COMPILED INTEGER BASIC** – 150 to 200 times the speed of Basic Compiled. Compiled Basic is for those applications where the speed of the machine is required without the inconvenience of assembly level programming. Ideal for scientific and educational users. Compatible with Petspeed.

Petspeed for 8000 series £240
Compiled Basic £165

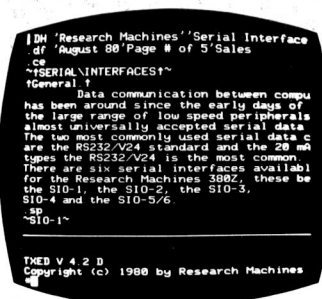

Special Offer: Petspeed for 8000 series PLUS Compiled Basic for just £320.

Prices do not include VAT or postage & packing.

Write or phone today for a free copy of the 'Life in the fast lane' demonstration disk.

80/40

CHARACTER MACHINE

Providing exactly the right facilities for different applications can be a real problem when a system is as versatile as the 380Z.

Take, for example, screen line length. Not only do different users have different needs; so too do individual users.

They might welcome forty character clarity for presentation, display, and control applications; but they also want eighty character capacity, because word processing, some programming languages, and many general-purpose applications demand it.

So we've developed Varitext — to provide both, on the same machine.

Varitext means that the 380Z user can always choose the line length best suited to the application. It gives access to a growing range of 80 character software without losing all those well-established and popular 40 character applications. It makes the 380Z equally effective as a computer and a word processor. It lets programmers use the character mode with which they are familiar — or which languages like ALGOL, FORTRAN, and PASCAL really need.

And it improves the quality of our already exceptional graphics, by offering a smaller character size for neater annotation.

But the Varitext option goes a great deal further than that. We also saw it as the opportunity for a major enhancement of the 380Z's screen handling capabilities. So we added:

- ☐ an 8 x 10 dot matrix, to further refine the character set;
- ☐ an additional set of 128 user-definable characters;
- ☐ reverse video, underlining, and selective character dimming;
- ☐ smooth scrolling and faster screen filling;
- ☐ user defined windowing (and independent scrolling) of screen areas;
- ☐ audible tone generation (option)

And all that, we believe, makes the 380Z's screen handling the best on the market.

The Varitext option is available with new systems or as a user-installable enhancement to existing 380Z systems. Contact our Sales Office for details.

Use Your Atom for~

Planning Projecting Writing Estimating
Scheduling Calculating Recalculating Erasing
Revising Critical Path Analysis....
With ATOMCALC only £39.10 inc. VAT

DESCRIPTION	COST	TOTAL
WOOD	12.00	12.00
PAINT	4.38	16.38
PHONE	1.06	17.44
RENT	14.27	31.71
PETROL	7.08	38.79
IN. FEE.	3.46	42.25
TOTAL		42.25

What is it?

Atomcalc is supplied as a plug-in 4k ROM with an all-purpose planning and modelling program. It is so easy to use - if you can use a calculator you can use Atomcalc. No programming skill needed.

The ROM creates an enormous grid of columns and rows like a ledger. All you do is to enter the headings and formula once and Atomcalc does the rest. Supplied with a very detailed 30pp user handbook.

What will it do?

Atomcalc can cope with anything from a household budget to company accounts. You set up a series of automatic calculating functions like totalling or percentages. Then fill in the columns with your figures and the program produces the answers. If you want to change one figure in the calculation it immediately changes the relationship of all the other figures involved. So, for example, you can see what effect on profit a 5% increase in sales might have or a 10% increase in production, or a 3% drop in transport.

And do not forget you can print them out on an optional printer or store them on tape.

How Can I Buy One?

Go to your Atom Dealer, or if there are none in your area just send a cheque for £39.10 (incl. VAT and P & P) to the address below. Credit Card holders can ring Cambridge (0223) 316039 and order direct.

Dept. 1 Acornsoft Ltd, 4a Market Hill, CAMBRIDGE.

ACORNSOFT

Brand new colour board NOW YOUR LIFE CAN BE MORE COLOURFUL!

£39

The board fits inside the Atom and generates colour output suitable for all makes of monitors and TV's.

Two colour palettes can be achieved
Red, Yellow, Green, Blue and White, Cyan,
Magenta, Orange. In text modes this provides
green on blue or orange on black displays.

Three outputs are provided:—

- Red, Green, Blue drives at TTL levels with a composite sync, the polarity of which may be link selected.
- A 1v composite video in monochrome only.
- A PAL encoded signal on Channel 36 suitable for feeding into the aerial socket on a domestic television.

You can fit the board yourself using a fine soldering iron or your dealer will fit it for you. The board can be used in a minimum Atom with the existing power supply, or if used in a maximum Atom a 5V externally regulated supply will be necessary.

Available from all Acorn Dealers or direct from Acorn at £45.24 inc VAT and p+p. Credit card holders can ring (0223) 245200 and place their orders direct.

Acorn Computers
Fulbourne Road,
Cherry Hinton, Cambridge

it's here at last!

NEW

Disc pack for the atom

Upgrade your atom with our new low cost disc pack only £299 plus VAT

- 40 — track single-sided 5¼" disc drive
- power supply to run both the disc pack and a fully expanded Atom
- disc controller card with 4K DOS ROM
- 3k bytes of static RAM
- 64-way Euro-connector plug and cable
- full operating instructions and manual

The disc controller is based on the Intel 8271 chip. This highly intelligent device minimises the amount of control software and memory requirement and so allows phenomenal high speed operation. Both soft and hardware has been vigorously tested and proved very, very reliable.

You will need an Atom with bus buffers and indirect edge connectors. The mail order price is £350 including VAT post, packing and insurance, the price at your Atom dealer £345.

If you do not have a dealer near you just write to us at the address below, or credit card holders can ring Cambridge (0223) 245200 and order directly.

Acorn Computers Ltd.,
Fulbourne Road,
Cherry Hinton, CAMBRIDGE

The disk operating system (DOS) decodes the following commands used to control the storage of files on disk:—

- * CAT catalogue files on disk
- * LOAD load image of memory contents as file
- * SAVE save image of memory contents as file
- * DELETE delete file from disk
- * SPOOL store all printer characters on disk
- * EXEC read characters from disk as if from keyboard

The DOS also replaces the cassette operating system vectors as used by BASIC to allow the use of the following commands in Atom BASIC:—

- LOAD load BASIC program from disk
- SAVE save BASIC program to disk
- FOUT open file for output
- FIN open file for input
- SHUT close file
- EXT find extent of file
- PRT find value of pointer into file
- PUT put number to file
- BPUT put byte to file
- SPUT put string to file
- GET get number from file
- BGET get byte from file
- SGET get string from file

These commands provide full random access of up to 5 disk files simultaneously.

TELETYPE ASR33 I/O TERMINALS

From £195 + CAR + VAT

Fully fledged industry standard ASR33 data terminal. Many features including: ASCII keyboard and printer for data I/O, auto data detect circuitry, RS232 serial interface, 110 baud, 8 bit paper tape punch and reader for off line data preparation and ridiculously cheap and reliable data storage. Supplied in good condition and in working order. Options: Floor stand £12.50 + VAT

KSR33 With 20ma loop interface £125.00 + VAT.
Sound proof enclosure £25.00 + VAT

"OLIVETTI TE300" PRINTER/TERMINALS

A complete I/O terminal with integral 8 hole paper tape punch and reader, full ASCII keyboard, 120 column printer, and control unit. The printer is capable of 150 baud with a serial TTL or balanced input-output sold in good overall condition but untested. Complete with circuit unguaranteed. Connect direct to your micro at ONLY £99.00 + £11.50 carr + vat.

MPU EXPERIMENTORS +5v, 12v, 12v, 24v POWER SUPPLY

Once again we are very pleased to offer this superb Power Supply Unit, and hope to satisfy most of our previous customers who were disappointed when we sold out due to demand last time they were advertised!!! These units may just have well been made for your lab., they consist of a semi-enclosed chassis measuring 160mm x 120mm x 350mm containing all silicon electronics to give the following fully regulated and short circuit proof outputs of:
+5v @ 2 amps DC +12v @ 800 ma DC
+12v @ 800 ma DC +24v @ 350 ma DC
and if that's not enough a fully floating 5v output @ 50 ma DC which may be sensed to give a host of other voltages. All outputs are brought out to the front panel via miniature jack sockets and are also duplicated at the rear on short flying leads. Units accept standard 240v mains input. They are ex GPO and may have minor scratches on the front panels, they are sold untested but in good internal condition. £16.50 each + £2.50 p+p complete with circuit and component list. Transformer guaranteed. **HURRY WHILE STOCKS LAST!!**

HIGH SPEED DATA MODEMS

A superb piece of engineering made by SE Labs Ltd. to a "no cost spared" spec for the GPO, the Modem 12 is a synchronous Modem for use on DATEL 2412 services, or other data links. Many features include switchable V26 modulation, 2400 baud full duplex 600/1200 standby, auto answer, 4 wire or 2 wire operation. Self test, LED status indication, CMOS technology, modular construction, original cost over £700 each. Believed brand new, supplied complete with PSU etc.
£185.00 + £9.50 carriage + VAT.
*Permission may be required for connection to PD lines.

5v D.C. POWER SUPPLIES

Following the recent "SELL OUT" demand for our 5v 3 amp P.S.U. we have managed to secure a large quantity of ex-computer systems P.S.U.'s with the following spec.: 240 or 110v A.C. input. Outputs of 5v @ 3-4 amps, 7.2v @ 3 amps and 6.5v @ 1 amp. The 5v and 7.2v outputs are fully regulated and adjustable with variable current limiting on the 5v supply. Unit is self contained on a P.C.B. measuring only 12" x 5" x 3". The 7.2v output is ideal for feeding "on board" regulators or a further 3 amp LM323K regulator to give an effective 5v @ 7 amp supply. Supplied complete with circuit at only £10.95 + £1.75 pp. Believed working but untested, unguaranteed.

ELECTRONICS

SHARP MZ-80K/MZ-80A/MZ-80B

Functional cassette software by Dale Hubbard

Buy 2 at £19.95 - take 1 at £5.95 FREE!!!

All programs in Standard Sharp Basic for 48k RAM upwards.
All programs supplied with exhaustive and attractively bound documentation.

DATABASE

The program that everyone needs. Facilities include sort, search, list, delete, change, totals, save file, line print if required, etc. etc. Can be used in place of any card index application.

£19.95

STOCK CONTROL

All the necessary for keeping a control of stock. Routines include stock set up, user reference no., minimum stock level, financial summary, line print records, quick stock summary, add stock, delete/change record, and more.

£19.95

MAILING LIST

A superb dedicated database to allow for manipulation of names & addresses & other data, with selective printing to line printer. Features include the facility to find a name or detail when only part of that detail is known. Will print labels in a variety of user-specified formats.

£19.95

DECISION MAKER

A serious program that enables the computer to make a sound decision for you based on various criteria. If you want to buy a car, hi-fi, house, etc., or you don't know which woman to marry then you need this one.

£5.95

INVOICES AND STATEMENTS

Ideal for the small business. A complete suite of programs together with generated customer file for producing crisp and efficient business invoices and monthly statements on your line printer. All calculations including VAT automatic and provision for your own messages on the form produced.

£19.95

RUBIK SOLVER

It's not our policy to offer games but we make an exception here for a program to solve the cube from ANY position. Shorthand notation makes learning the solution by heart possible for most active brains.

£12.95

THE CATALOGUER

This dedicated database is ideal for use in any situation where a catalogue could be utilised. E.g. stamp collection, coins, photos, slides, books, records etc.

£19.95

COMMERCIAL ACCOUNTS

A gem of a program, all for cassette, with the following features:—

Daily Journal	Sales Ledger
Credit Sales	Purchase Ledger
Cash Sales	Bank Account
Credit Purchases	Year to Date Summary
Purchases — other	

A fully interactive program suitable for all businesses. Files can be saved and loaded and totals from one file carried forward to another on cassette. Particularly useful from a cash flow point of view, with an immediate accessibility to totals for debtors and creditors. Bank totally supported with entries for cheque numbers, credits and, of course, running balance.

£19.95

HOME ACCOUNTS

£19.95

Runs a complete home finance package for you with every facility necessary for keeping a track of regular and other expenses, bank account, mortgage, H.P. etc etc etc!! You'll wonder how you ever managed without it.

CHOPIN - LES ETUDES

Six beautiful studies from Opus 10 and 25 performed for you live by Mr. Sharp — Spellbinding!!!

£5.95

MOTOR ACCOUNTANT

Find out exactly what that car is costing you and keep a data file with all your expenses therein!

£5.95

RECIPE FILE

Let all those computer widows have a bash! The wives will really enjoy the fun of this program designed to keep all her recipes. Will even suggest a menu for a day/week! Excellent value.

Mc Combo

The specifications
speak for themselves!

Single board computer

Z80A (4 Mhz)

64K RAM

12K EPROM (including monitor)

4 serial RS232 (sync/async/bisync)

1 Centronics (bi-directional)

Facilities to add further disks

(5¼ or 8")

8 timers (4 user addressable)

Hard disk option

IBM 3740/34 format

Designed and built in the U.K. after intensive research into the requirements of the micro market, the McCombo represents a breakthrough in the price and performance of CP/M based computers. By using the latest state of the art design, the McCombo offers specifications usually found on larger and more expensive systems. The McCombo is capable of conversing with mainframes and being CP/M compatible has a vast library of fully integrated software for most applications.

"A leading computer company proves that if you've got something worth showing, it's good business sense to make an exhibition of yourself."

THE THIRD INTERNATIONAL COMMODORE COMPUTER SHOW OPENS JUNE 3RD

The Commodore Show is one of the finest opportunities to see the best of today's microcomputer systems in action. A wide range that covers our home colour computer and our selection of sophisticated business systems as well as the latest in software and related products.

Also we'll demonstrate just how they can improve efficiency, whatever line of business you're in.

There'll be seminars on education, communications and a wide variety of business applications.

Guests include knowledgeable and interesting people like Jim Butterfield, who's the foremost authority on the PET and its capabilities.

All in all, it's the biggest and best Commodore Show yet, and definitely not to be missed.

See us at: The Third International Commodore Computer Show, Cunard Hotel, Hammersmith, London.

Thursday June 3rd	12am - 6pm
Friday June 4th	10am - 6pm
Saturday June 5th	10am - 5pm

VICTUALS

VIC COMPUTING is the magazine for the **Commodore Vic**.

We don't write about any other computers —
Just the Vic.

So if you have a Vic, or if you're thinking of getting one, you can't afford not to subscribe.

We give you tips, tweaks and advice. We review any and all Vic-compatible hardware and software. We give you tested programs from readers and from our contributors: utilities, games, character editors. We give you all the Vic news — and our views of it. We give you columnists like Jim Butterfield and Mike Todd.

We give you what you want. And we give you what you need.

Please enter my annual subscription to Vic Computing Magazine. I enclose a cheque/postal order made out to Vic Computing for (please tick one):

"PLUTO" COLOUR GRAPHICS PROCESSOR

Pluto is a self-contained colour display processor on an 8" x 8" NASBUS and 80-BUS compatible card featuring:

- Own 16 bit microprocessor
- Up to 192 Kbytes of dual-ported display memory for fast flicker-free screen updates. (Outside of the host address space).
- 640(H) x 288(V) x 3 planes (8 colours) - 2 screenfulls OR 640(H) x 576(V) x 3 planes (interlaced display)
- Fast parallel I/O interface usable with ALMOST ANY MICRO. Only single +5v supply required.

Pluto executes on-board firmware providing high level functions such as:

- Fast vector draw - over 100,000 pixels/sec. Lines can be drawn using REPLACE, XOR, AND, OR functions
- User-definable characters or symbols
- Spare display memory with memory management facilities for allocating symbol storage space or workspace
- Rectangle Fill and copy using REPLACE, XOR, AND, OR plus 5 other functions
- Fast access to single pixels
- Write protect memory planes during copy
- Double-buffered screen memory for animated displays
- Complex polygon colour fill

Pluto is expandable. An expansion board will be available later this year to give Pluto up to 8 memory planes with no loss of resolution.

AVAILABLE NOW. Please contact us

AT LAST!

A COMPLETE COMPUTERISED SYSTEM FOR
THE ENTHUSIASTIC RACEGOER

COURSEPLAN 200

- * The product of 10 years' exhaustive statistical research
- * Programmed to achieve a MINIMUM 50% winning selections
- * Unique and safeguarded Staking Plan built in to the system.
- * The 1981 Flat season produced 52.61% winners and a paper profit of £4,035 during the 10 week peak period of the program (£10 Base-unit). Level stakes only, would have shown a £1,371 profit. (All figures AFTER tax @ 10%)

**COURSEPLAN WILL BE RESTRICTED TO 200
SALES ONLY. THE REASON FOR THIS
EXCLUSIVITY SHOULD BE SELF
EXPLANATORY**

Full details of this brilliant and long-awaited program will be provided on receipt of your written enquiry to:-

Francoform

6 SANSOM STREET, CAMBERWELL, LONDON SE5

Essential reading for all computers

FORTH THEORY AND PRACTICE LISP THEORY AND PRACTICE

Two books from Acornsoft that provide a thorough introduction to programming in LISP and FORTH. Many practical examples of programs are included.

Most of the contents of the manuals are applicable to any machine, although the manuals also explain the operations for the Acorn Atom. Both manuals are spiral bound to lie flat and have been produced and laid out clearly and concisely.

Each manual costs £6 including post and packing and is available from dealers or direct from:- Acornsoft Ltd, 4A Market Hill, Cambridge CB2 3NJ.

Credit Card Holders can ring 0223 316039 and order direct.

HEWSON CONSULTANTS

ZX81

HINTS AND TIPS FOR THE ZX81 £3.95

"Good value and quite fascinating... a very inexpensive way of acquiring months of programming experience."

YOUR COMPUTER Nov 1981

"Excellent... very good value for money".

SYNC

80 pages explaining clearly how to squeeze a computing quart out of a Sinclair pint pot.

Saving Space - vital reading for all ZX81 owners.

Understanding the Display File - using the display file as memory, clearing a part of the display, using tokens in PRINT statements.

Converting ZX80 programs - explaining simply but comprehensively how to convert the hundreds of published ZX80 programs.

Chaining programs - revealing techniques for passing data between programs, calling subroutines from cassette and establishing data files.

Machine Code Programs - all you want to know about Z80 machine language.

Explained how to write, load, edit and save machine code and how to debug your routines.

Routines and programs are scattered liberally throughout the text and the final chapter consists of twelve useful, interesting and entertaining programs such as LINE RENUMBER, BOUNCER, SHOOT, STATISTICS etc.

16 K RAM PACK £24.95

A top quality add-on 16K dynamic memory specially designed for the ZX81. Simply plugs into the port at the back of your Sinclair. Can be used in conjunction with the ZX printer. Neatly packaged in a black plastic shell to match your ZX81.

64K RAM £79.00

Developed by Memotech this amazing 64K RAM needs NO extra power supply. Simply plugs neatly and firmly into the rear port of your ZX81. Can be used with the ZX printer and other add-on hardware.

Just look at these features:

* 8 - 16K can be switched in and out in 4K blocks to leave space for memory mapping

* 12 - 16K can be protected against overwriting during loading from cassette.

* Directly addressable and user transparent.

* Up to 15K of Basic program area

* 32K or more of variables area.

Z80 OP CODES £1.45

A must for the beginner and the experienced programmer alike. This handy ready reckoner lists all 600 plus Z80 machine code instructions in decimal and hexadecimal with their mnemonics. Each Op Code is succinctly explained and cross-referenced. Supplied in a protective transparent wallet for easy reference and durability.

PROGRAMMERS TOOLKIT

£6.50

Are you writing your own programs for your ZX81? Then use our TOOLKIT to do the donkey work. Copy into RAM before you start work and then you will have it at your fingertips.

Comprehensive LINE RENUMBER including GOSUBs and GOTOs; LOAD, EDIT, and RUN machine code programs; INSPECT the ZX81 system routines; COPY them into RAM and PATCH and/or EXTEND them; FIND a given piece of Basic code and Replace all occurrences of it; move blocks of Basic lines with EDIT.

LANGUAGE DICTIONARY £3.75

Now you can construct your own English/French, English/Anything dictionary with our LANGUAGE DICTIONARY. UPDATE the entries, SEARCH for a word, CREATE a new dictionary and SAVE it on tape all with the same fully-

detailed program.

STATISTICS 1K SOFTWARE £3.75

Three programs on the one cassette.

- 1) i) Statistics - prints the current mean and standard deviation after each value is entered.
- ii) Regression - prints the current mean and standard deviation of the x, y values and the intercept and slope of the regression line.
- iii) Trend - prints the current mean and standard deviation of the x, y values and the intercept and slope of the trend line.
- 2) CHI SQUARED TEXT - prints the current value of the Chi squared statistic and the current sample size.

GRAPH PLOT Plots a graph of data entered from the keyboard

16 K SOFTWARE SPACE INTRUDERS £5.95

Not to be missed. All action display. 40 alien ships in each squadron. Automatic option, the machine plays itself. Squadron after squadron attack your position. Three laser bases. Full score display. Written in machine code for super fast fun.

PILOT

NEW!
£3.95

New and exciting, Pilot challenges you to take off, fly between beacons, then land whilst watching wind speed and dodging craggy mountains - either could lead to disaster! If you take the challenge, you may soon learn to fly solo - so detailed are the flying instructions. Coast along in Autopilot - just to gain confidence, then battle your way through 5 further modes, 5 different ways of trying to steer your plane safely back to base, increasing in difficulty, testing your skills. Good luck with your flight against the unpredictable elements!

Step by step with the computer system designed for tomorrow.

- * 6502 Microprocessor
- * 2K Monitor TANBUG
- * Intelligent socket accepts keypad or full ASCII Keyboard
- * Chunky Graphics and Lower Case Options
- * Connects to unmodified B/W or Colour TV

For the first time buyer or experienced user, Microtan 65 is a superb route into personal computing. If you are looking for a sophisticated machine with the capability of expansion into a professional system, then this is the

computer for you. Step by step with the computer system designed for tomorrow. . . .

6502 Microprocessor

Probably the most popular CPU (central processing unit) for personal computers, having a powerful instruction set and architecture.

2K Monitor TANBUG

The built-in 'mind' of the machine, TANBUG controls all system functions and gives comprehensive machine-code facilities. Functions include: set and clear breakpoints, single step through program, execute program, copy block of memory, modify memory locations and much more.

Intelligent keyboard socket

For absolute beginners we can supply an easy to use 20-way Hex keypad; for the more experienced user there is a full typewriter style ASCII keyboard. Either way, Microtan will work out exactly which type you are using and act appropriately.

Chunky Graphics Options

For drawing simple lines and graphs, or for animated games, Chunky Graphics is a low cost answer. This set of chips plug into the Microtan board

Microtan 65

£79.00 Ready
+VAT Built

£69.00 Kit
+VAT

and allow graphics to be built up on the screen at a resolution of 64 rows by 64 columns.

Lower Case Option

To extend the character set to 128 characters, allows for real descenders on lower case characters and a set of extra symbols and characters for simple graphics.

Microtan Accessories

20-way Hex keypad MPS 1 Basic power supply

Aerial connector lead

Full ASCII Keyboard

MPS 2 Full system

power supply

Mini — motherboard

Microtan is available ready-built or as a kit.

We recommend that you should have some soldering experience before attempting the Microtan Kit, although if you do run into problems you can make use of our "Get you Going" service

(telephone for details).

TANEX

- * 7K Static Ram
- * 10K Microsoft Basic
- * 32 Parallel I/O lines
- * 1 Serial I/O port
- * XBUG
- * Cassette Interface

The first step in expanding your system. Tanex provides the extra facilities necessary for the serious programmer. Memory expansion: Tanex has provisions for up to 7K of static RAM and up to 14K of EPROM using 2716 or 2732 chips.

XBUG and BASIC

XBUG is a 2K extension to TANBUG that contains a mnemonic assembler and disassembler and cassette firmware running at 300 Baud CUTS, standard or high speed. 2400 Baud Tangerine standard with 6 character filenames. Tangerine have taken out a full O.E.M. licence for Microsoft BASIC, this is a full feature implementation with interrupt and machine code handling, and a superb program editor.

Both XBUG and BASIC plug directly into Tanex and are supplied with comprehensive user manuals.

Parallel I/O

When fully expanded Tanex includes two V.I.A.s (Versatile Interface Adaptors) which implement the cassette interface and the parallel I/O ports. Software in TANBUG V2.3 enables you to plug in and use a Centronics type printer. The two V.I.A.s also contain counter timers that can be used for a variety of applications enhanced by the use of the integral handshake facilities.

Serial I/O

Also on the expanded board is a serial I/O port that can be used to interface RS232 or 20Ma loop terminals or VDU's, again all controlled by TANBUG V2.3.

THE ZX81 COMPANION

by Bob Maunder.

ISBN 0 907211 01 1

If you have a Sinclair ZX81 and want to use it to its full potential then, as the experts have all agreed, this is the book for you. It contains detailed guidelines and documented programs in the areas of gaming, information retrieval and education, as well as a unique listing of the 8K ROM for machine code applications.

'Far and away the best . . . once again Linsac has produced the book for the serious end of the market'. — *Your Computer*, November 1981.

'The ZX81 Companion is a most professional product . . . with many good illustrative programs, tips and warnings'. — *Education Equipment*, October 1981.

'Bob Maunder's attempt to show meaningful uses of the machine is brilliantly successful . . . thoughtfully written, detailed and illustrated with meaningful programs . . . To conclude — the book is definitely an outstandingly useful second step for the ZX81 user'. — *Educational ZX80/81 Users' Group Newsletter*, September 1981.

SIMPLICALC

NOW ON
VIC-20!

.....FROM CRONITE

THE LOW COST ALTERNATIVE

SIMPLICALC is a small, powerful work sheet program. It runs on any CBM PET, except "old ROM", even cassette-based. The sheet is viewed on the screen.

SIMPLICALC makes the "what if" exercise available on all sizes of CBM. On a 32k it provides a much larger useable matrix than any other similar program: on an 8k it provides enough space to analyse a capital purchase or personal tax computation.

SIMPLICALC is freeform. Its uses are many. For instance, it's been used for calculating chemical weights, projecting profits by product group, and costing out salary reviews. Be inventive.

SIMPLICALC is simple to use, with 8 single-key commands. Print your sheet out, and save it on cassette or disk depending on version. A comprehensive manual is provided.

To order your copy of this versatile numeric tool, send cheque with details of your system, specifying whether your CBM is *2001/3000/early 4000 (PEEK (144)=46) *late 4000 *8032 and whether you want cassette £29.90 incl. VAT or disk £36.80 incl. VAT (specify drive type). Security copies available (no backup possible) at £4.00 cassette and £6.00 disk incl. VAT.

Cronite Computer Systems Limited

SPIDER SOFTWARE APPLE SOFTWARE

OH NO - NOT ANOTHER APPLE DATABASE?!!

Some Questions and Answers on ACCESS - A new database management system for Apple computers from SPIDER SOFTWARE.

How many records can I have?

This depends on the size of each record. The maximum record size is 1560 characters. The maximum number of records per disk volume is 7936 but this is dependent on the record size. As an example, if your records are 200 characters long, you may have a maximum of 671 records per volume. A maximum of 40 fields per record is available.

How long will it take to find a record?

A powerful advanced IRAM (Indexed Random Access Method) is utilised for major record retrieval purposes giving an access speed of either instant recall within 3 seconds. Any field (or combinations thereof) with multiple search criteria will either give instant recall or will take a maximum of 23 seconds. On the SyMBfile hard disk everything is at least 7 times faster.

How long will it take to sort a disk full of information?

All sorting is done on an index. If the sort is on the primary index it will take 0.2 seconds regardless of the number of records. To sort on any field which is not indexed involves first creating an index for that field which is then sorted. The time taken depends on the record size (generally less than 3 minutes). Any index can be saved for later use or made into a primary index. Sorting a disk need not involve creating a sorted version of the database.

How many disk drives do I need?

ACCESS will ideally run on 2 drives. However, it will support a single drive system and a version is available for the SyMBfile 5 megabyte hard drive.

How about report formats?

Reports are user-configured and can contain report headings, column headings, column sub-totals, brought forward totals, grand totals, computed fields, page numbering etc. Reports can be on selected and/or sorted data.

What if the dog chews my program disk?

We provide copy routines for backing-up of the program disk and the data disks as many times as you require. The ACCESS system is a combination of hardware and software.

Is the program menu-driven?

YES. ACCESS constantly displays prompts indicating the options available wherever you may be in the program.

How is the data stored?

ACCESS creates and uses its own data disks. However, facilities are provided to enable you to produce standard DOS 3.3 text files in either sequential or random access format using any sorted or selected fields. Because of ACCESS's own data storage techniques a very large database may require more than one disk to store the text file(s) produced.

How easy is it to create records and edit them?

ACCESS has a powerful word processor style screen editor enabling insertion and deletion of the characters, etc., full cursor control across fields and pages of a record. A maximum of 40 screen pages are available. Password protected fields are supported as are computed on-screen fields.

What if I delete a record by mistake?

ACCESS only marks a record as deleted. Facilities are given to either 'undelete' deleted records or purge deleted records from the database.

My current database takes ages for me to add and save records because it needs to re-structure the entire file to keep the 'primary key' in alphabetical order. Will this happen with ACCESS?

No!!! ACCESS uses logic and technique to handle your data; there is no reason (should you have the stamina) why you should not fill an entire disk with information as fast as you can type and immediately retrieve all the information in sorted order or order of entry, etc. All complex and time-critical functions including disk input and output, indexing, sorting, searching, screen display and editing are performed by ACCESS using powerful machine-code routines.

What hardware do I need?

48K Apple II Plus with DOS 3.3 and 1 or 2 disk drives. Most makes of printer are supported.

Why should I buy ACCESS and how much is it?

Most facilities in ACCESS are available in other comparably priced database managers. However, ACCESS is more powerful and faster than its competitors in each function. ACCESS has gone beyond the boundary of merely complex facilities, it is powerful and 'intelligent' enough to make itself extremely simple to use. The retail price including VAT is £199.95.

A technical sheet is available on the ACCESS system from your local Apple dealer who should also be able to give you a demonstration of its flexibility.

We stock a large range of packaged software for the Apple. Please write or telephone for a copy of our comprehensive list.

16K RAM PACK £35 (\$69.95)

Fully built, tested and guaranteed
Black case
No 'wobble' problems – fully supported by ZX81
Fully compatible with printer etc, etc.
Full refund if not delighted

(Please allow 14-21 days for delivery)

**WHY PAY
MORE**

An ESSENTIAL addition to your 1K RAM ZX81 (or ZX80 8K ROM)
(please state which when ordering)

TOOLKIT (written by PAUL HOLMES)

Provides the following additional facilities:-

Line renumber – you state starting number and increment value.
Search and replace – changes every occurrence of a character as you require.
Free space – tells you how many free bytes you have left

SPECIAL GRAPHICS ROUTINES

Hyper graphics mode – graphics never seen on a ZX81 before.
Open – instantly sets up as many empty print lines as you require. (1K version only)
Fill – used in conjunction with OPEN fills your screen instantly with your specified character
Reverse – changes each character on your screen to its inverse video.

TAPE ROUTINE – provides a system WAIT condition until a signal is received in the cassette ear jack – many uses!

All these routines are written in machine code and together take up only 164 BYTES of your precious RAM - an incredible achievement!!

The price is incredible too! ONLY **£3.95 (\$9.90)** for cassette, including FULL instructions and example programs.

ALSO available 16K version ONLY **£4.95 (\$9.90)** which includes all the above PLUS: GOTO's and GOSUB's included in line renumber.

Search for and list every line containing specified character.

16K VERSION

CASSETTE professionally recorded by SOUND NEWS STUDIOS

GAMES PACK – Beat this for value! 5 x 16K programs PLUS 2 x 1K programs £4.95 (\$9.90)

3-D Battle (M/code-1K) – Fast-moving space battle with continuous count-down of energy units left.

City Bomb (M/code-1K) – Destroy the buildings and land your plane. Your fuel has nearly gone and you circle the city lower and lower.

Warp Wars (Basic & M/code-16K) – Features realistic space-craft moved by M/code for (previously sold at Microfair with instant response. Sweet Tooth for £4.95)

Snake (Basic-16K) – A game of thought and skill. Pass through all the marked squares without crossing or doubling back on your path, but watch out for the expanding black blob.

Sweet Tooth (Basic & M/code-16K) – M/code routines used to move your fat face round the screen and gobble the sweets.

PLUS **Slalom and Black Holes** (previously sold together for £4.95)

OVERSEAS CUSTOMERS PLEASE NOTE

Payment may be made in Sterling (Money Order available at your bank) or \$U.S. (U.S.A. customers only).

PAYROLL — Various versions for all purposes. Manages up to 100 employers. Calculates complex bonus rates etc. For all Sharp systems cassette or disc operated. From £65.00.

For further details write to:

MICROTEK LTD. 15 LOWER BROOK ST. IPSWICH
SUFFOLK. TEL: (0473) 50512 or 52466.

VIC PET APPLE SOFTWARE

NEW GRAPHICS — full screen super graphics package for the VIC. Adds 18 commands to BASIC. Draw detailed pictures using 152 X 160 points. Hires & Multicolor graphic modes on same screen! Switch between text and graphics screens with function keys. Save/load pictures to/from tape or disk. Requires 3K or 8K expander. With sample programs and user's manual. Price \$25; manual only \$5.

VIC/PET VIGIL — Interactive Games Language — Program your own or play the 9 games included. With 60+ powerful commands. Easy to learn. VIC version has color (requires 3K or 8K expander). Complete with user's manual. Price \$35; manual only \$10.

VIC/PET PIPER — the MUSIC MACHINE — Simplest way yet to compose, conduct and play music. Complete music control of notes, rests, volume, repeats, tempo, etc. Written in fast machine language. With sample compositions and user's manual. Price \$25; manual only \$5.

VIC HIRES/MULTICOLOR GRAPHICS UTILITIES — Add graphics to VIC BASIC. Requires no extra memory. Plot points, lines and boxes in fine detail — 104 X 152 points. With sample programs and user's manual. Price \$15; manual only \$3.

PET TINY Pascal PLUS+ — structured language alternative to BASIC. With Editor, Compiler and Interpreter. All programming constructs supported. With user's manual. Graphics or non-graphics versions. For NEW/4.0/8032. W/graphics (32K) — disk \$50; cassette \$55. W/O graphics (16K+) — disk \$35; cassette \$40; manual only \$10.

NEW APPLE II DYNASOFT Pascal — complete Pascal development system with Editor, Compiler, Interpreter and Supervisor. All programming constructs and data types: scalars, char, array, pointer, integer. Hires, Lores and machine language interface. With sample programs and user's manual. Disk \$50; Disk with complete machine readable source code \$85; manual only \$10.

PET TINY BASIC COMPILER — Produces true 6502 code. Supports all floating point operations. Subset of the full PET BASIC. Compiler listing optional with 16K version (included). With user's manual. For OLD/NEW/4.0/8032 and 8K+. Price \$25; manual only \$5.

PET MACHINE LANGUAGE GUIDE — Now in its ninth printing. Learn the hidden talents of your Old, New or 4.0 Rom PET/CBM. 30+ routines fully detailed. Price \$9 (\$11 foreign).

NEW ABACUS — Beautifully crafted Chinese abacus. Teach children basics of math or use as lovely decoration. With free 50+ page manual explaining use. Price \$14.95 + \$2.00 postage (\$4.00 foreign).

ABACUS SOFTWARE
P. O. Box 7211
Grand Rapids, Michigan 49510
616 / 241-5510

Unless noted, prices are for cassette. Add \$3.00 per disk package. Foreign orders add \$5.00 per package or \$2.00 for manual only. All orders must be prepaid in US Dollars, VISA, MC, ACCESS, Eurocard.

SOFTWARE FOR CP/M®

HIGH QUALITY SOFTWARE — WITH HIGH QUALITY SERVICE

NEW! The Formula: £300. Application builder and reporter. SUPERCALC: £165. Spread sheet financial planning. SPELLSTAR: £125. Option for Wordstar.

WORDSTAR - Professional word processing software. On-screen formatting, wordwrap, pagination, line and character count on view. Micro-justification on daisy-wheel printer. Search and replace. Block/paragraph manipulation. External file read/write. Background printing during editing etc.	£250
MAIL-MERGE - Powerful Wordstar enhancement for file merging and document personalisation.	£65
DATASTAR Screen orientated system for Data Entry, Retrieval and Updating.	£175
SUPERSORT - Sort, merge and selection program.	£125
CONFIGURABLE BUSINESS SYSTEM (CBS) - Unique information management system with user definable files, powerful report generator, menu-driven for ease of use. No programming experience necessary!	£225
ACCOUNTING PACKAGES by Median - Tec: PAYROLL, SALES, PURCHASE, NOMINAL Specially developed by UK software house to exacting specifications. Written in Microsoft Basic each package may be customised by end user, all are widely used. Ledgers are open item. Payroll caters for weekly and monthly pay.	£500 each
PROJECT COST CONTROL/JOB ACCOUNTING - A comprehensive set of programs to monitor budgets, account for expenditure and project completion etc. Ideally suited for contractors. Written in CBASIC-2.	£150
STATISTICS PACKAGE - Over 25 routines including Regression & ANOVA	£100
MATHS PACKAGE - Over 40 easily used routines.	£100
IBM - CP/M COMPATIBILITY - Powerful utility to transfer data to/from IBM machines in standard disk format.	£110
MICROSOFT BASIC INTERPRETER	£155
MICROSOFT BASIC COMPILER	£205

MICROSOFT FORTRAN COMPILER	£205
MICROSOFT COBOL	£310
MAGSAM - Versatile easy to use Keyed File Management System for Microsoft Basic or CBASIC.	£130
CIS - COBOL - ANSI 74 implementation to full level 1 standard. Supports random, indexed and sequential files, features for conversational working, screen control, interactive debugging, program segmentation etc.	£425
FORMS-2 - Automatic COBOL code generator for screen formats.	£100
PASCAL-2	£255
STRUCTURED BASIC - Relocatable compiler	£160
CBASIC-2 - Extended Disk Basic pseudo compiler and run-time interpreter.	£75
SELECTOR III - C2 - Information management system written in CBASIC-2	£185
SELECTOR IV - Upward compatible version of III with enhanced reporting.	£300
BSTAM - Telecomms facility for exchanging files between CP/M computers.	£75
ASCOM - Facility for communicating with other computers.	£95
TRANSFER - CP/M to CP/M file exchange - telecomms source code	£95
MACRO 80 - Macro Assembler	£99
CP/M 2.2 - Standard Version 8" Single Density.	£99

Please contact us for availability of other products
All orders must be PREPAID. Add £1 per item P & P (Minimum £2.00) and VAT

ZX 80/1 WAR!

ZX KEYBOARD FULLY CASED WITH REPEAT KEY

FULLY CASED KEYBOARD	£37.95
UNCASED KEYBOARD	£27.95
KEYBOARD CASE	£10.95

This is a highly professional keyboard using executive buttons as found on top quality computers. It has a repeat key and comes, complete in its own luxury case. This is a genuine professional keyboard and should not be confused with toy keyboards currently available on the market.

16K RAMPACKS MASSIVE ADD ON MEMORY FULLY CASED

comes fully assembled, tested and guaranteed

The 16K Rampack plugs straight into the user port at the rear of your computer. And, of course, as in all our products the Rampack is fully enclosed in a matt black slimline plastic case.

This means you can handle it with complete safety and you do not have to stare at ugly components – as in other makes of 16K. The Rampack NEEDS NO EXTRA POWER and will operate quite happily on your Sinclair power supply. Fully built and tested.

Don't forget you can always order on the telephone with your credit card.

Six days a week for a same-day service.

WHY WAIT TO PAY MORE FAST IMMEDIATE DELIVERY

NASCOM USERS

Take a look at the NASCOM APPROVED HS-IN STORAGE SYSTEM. Where else can you get features like these. . .
A full on screen instant display of the catalogue.
Auto verification of each file as it is written.
CRC error checking.
Link selectable 2MHz or 4MHz option.
Fast data transfer rate of 6000 bps.
Powered from NASBUS.
8" sq NASBUS compatible PCB.
Far more reliable than any floppy disk system.
112K on-line storage with 2 drive system.
 The HS-IN has a Command Set which makes it a floppy-disk "look-alike". It can load an 8K program in under 11 seconds and can store up to 56K (28 files) on each side of tape. Why spend £700 on a floppy disk system when the less expensive HS-IN system has a command set like this. . .

BRIDGE THE GAP BETWEEN EXPENSIVE FLOPPY DISK SYSTEMS AND UNRELIABLE CASSETTES.

B — Write a Basic file
C — Instant display of catalogue.
D — Delete file
J — Jump to Basic.
N — Jump to NAS-SYS.
Q — Warm start to NASPEN text editor.
R — Read a file.
T — Transfer file to another drive.
W — Write a file.
X — Exit and rewind cassettes.
Z — Warm start to Basic.

This Mini-Cassette Storage System is technologically far ahead of anything like it on the market and is extremely reliable into the bargain. AND THE COST?
 Single Drive System built and tested £199
 Double Drive System built and tested £279
 Carriage £3.50

MICRO-SPARES CARRY FULL RANGE OF NASCOM AND GEMINI COMPUTERS.
 MICRO-SPARES ARE A MEMBER OF THE MICROVALUE GROUP

TEACH YOURSELF COMPUTING VIA THE BBC SERIES AND HAVE FUN!

Introducing the TEXAS TI99/4A home computer which plugs direct into any T.V. for full colour.

Superior colour, music, sound and graphics – and a powerful extended BASIC – all built in. Plus a unique, new Solid State Speech TM Synthesizer and TI's special Solid State Software TM. Compare it. Pound for pound. Feature for feature. There's a computer in your future. And the future is now . . .

We've entered a new and exciting era – the age of the home computer. Perhaps you're already quite knowledgeable about computers and are looking for the most programming power and versatility for your money. Perhaps you've just read about it, and want to learn more. Either way, you need to look closely at Texas Instruments TI99/4A Home Computer. The TI99/4A was designed to be the first true home computer – skilled computer users and beginners alike will be able to put it to effective use immediately.

If you're new to computers, the TI99/4A is for you.

You can begin using the TI Home Computer literally minutes after you unpack it.

Without any previous computer experience or programming knowledge. You simply snap in one of TI's Solid State Software TM Command Modules and touch a few keys.

Step-by-step instructions are displayed on the screen. So you or just about anyone in your family can use the TI99/4A.

Two pioneering technological developments in particular set the TI99/4A apart from the rest.

Solid State Speech TM – This optional speech synthesiser enables the TI99/4A to literally speak-to provide verbal prompts and special messages to the user. Actually reproduces the human voice electronically. Hundreds of words are available, and plug-in word modules will add hundreds more.

TI's exclusive technology lets you call up the words you want by simply typing them in. Outstanding voice clarity and fidelity. Solid State Speech is a proven technology already on the market in TI's unique Speak and Spell TM electronic learning aid for children.

Solid State Software TM Command Modules – Available in a wide range of application areas including many games, (Chess, Blackjack/Poker, Pin Ball, Bingo, Attack From Outer Space,) to name but a few. These optional ROM modules actually add application program memory to your TI99/4A. Software now includes Teach Yourself Basic, Extended Basic, Teaching Aids for Young Children etc. etc. **They let you use the TI Home Computer immediately, with no programming.**

Serious programmers will appreciate the time and effort saved by these pre-programmed modules. Plus, they'll let you introduce your family to the computer in the easiest possible way. Solid State Software was pioneered by TI for use with its powerful programmable calculators.

If you know computers you'll quickly see the difference in the TI99/4A.

Texas Instruments has taken those features you've been wanting-plus some you may not have heard about yet-and included them in one incredible, affordable computer system. The TI99/4A gives you an unmatched combination of features and capabilities, including:

- **Powerful TI-BASIC** – Built-in 13-digit, floating point BASIC. Fully compatible with ANSI Minimal Basic, but with special features and extensions for colour, sound and graphics.
- **Up to 72k total memory capacity** – 16K RAM (Random Access Memory) (Expandable to 48K). 26K ROM (Read Only Memory) plus up to 30K ROM in TI's Solid State Software Command Modules.
- **26K ROM** – Operating system, BASIC, floating point, sound and colour graphics software are contained in ROM.
- **16-colour graphics capability** – Easy-to-access, high resolution graphics have special features that let you define your own characters, create animated displays, charts, graphs . . . and more.
- **Music and Sound effects** – Provides outstanding audio capability. Build three-note chords and adjust frequency, duration and volume quickly and simply. You can build notes with short, straightforward commands. Five octaves from 110 Hz (Hertz) to beyond 40,000 Hz.
- **Built-in equation calculator** – Unique convenience feature helps you find quick solutions to every day maths problems, as well as complex scientific calculations. Directly accessible from the keyboard.

Ideal learning aid for every member of your family – including pre-school children and fun too only –

VIDEO GENIE and TRS80

THE ROM—VIDEO GENIE & TRS 80 (3 ROM Models)

Are you fed up of loading a lower case drive every time you switch on? — Want your name inside our computer — Better loading (TRS80) — Sick of bouncy keyboards—!

You need our new ROM—simply remove old—plug in new.

- 1) Firmware driver for lower case
- 2) Security code displays—your name & post code?—up to 21 characters
- 3) Improved tape loading
- 4) Alleviates repeating characters (key-bounce)
- 5) Checks for feature ROMS

£14.95 + VAT + P&P (80p)

FEATURE ROMS £18.95 + VAT + P&P (80p) A series of ROMS starting with FEATURE 'A'

- 1) Single keystroke commands
e.g. Shift A = Auto etc.
- 2) Flashing cursor (can be toggled on/off)
- 3) Repeating characters—with delay—(toggle)
- 4) Machine code monitor and editor
- 5) System load and save for backing up those system Programs —uses no RAM and so can deal with a FULL 16K program

NEW

FEATURE 'B'—extended basic

- 1) Merge—two basic programs to one
- 2) Renumber
- 3) Screen print
- 4) Various basic tools PLUS

Access and Barclaycard accepted.

General Northern Microcomputers (GNOMIC)

46 Middle Street, Blackhall, Hartlepool, Cleveland. Tel. Peterlee (0783) 863871

Plug on for feature ROMS

Now you can simply plug on the back of your computer, insert ROM and away you go.

VG £29.95 inc. ROM A + VAT + P&P
TRS80 £34.50 + VAT + P&P (80p)

48K RAM—internal

TRS80 & VG £70 + VAT + P&P (80p)

Plug in our modules. Connect three wires (VG) or five (TRS80). You are not required to piggyback chips. Keep your old RAM (or sell it!). Compatible with expansion.

LOWER CASE HARDWARE (VG & TRS80)

Unplug two IC's, plug in two modules, connect three wires—EASY! £18.00 + VAT + P&P

BOOKS

"Disassembled Handbook for TRS80"—A Self Teach—Series of Books—Written by Bob Richardson of New York. Very well received by U.S. Reviewers, **Essential** Reading for TRS80, Video Genie & Radio Hams.

Vol. 1 Decoding the ROM & Calls, etc. **£6.45**

Vol. 2 Using Calls, to shorten programs, etc. **£8.75**

Vol. 3 D/A—AD, Spooling, etc. **£10.50**

BUY ATOM LISP

and discover artificial intelligence

Essential for :

- * students learning LISP
- * research
- * hobbyists interested in artificial intelligence
- * systems designers.

ATOM LISP is an interpreter for the language LISP consisting of 5 1/2K of machine - code interpreter plus 2K of initialised LISP utilities and constants which can be deleted if not required.

Important Features

- fully interactive with explicit EVALUATE and VALUE IS messages
- automatic parenthesis count
- SUPERPRINT to format the printing of large expressions
- screen editing or built-in LISP editor
- errors trapped and optional full traceback printed.

ATOM LISP includes a number of extensions to basic LISP, including:

- PEEK, POKE and CALL to control hardware and machine-code programs
- functions can have optional arguments with default values
- improved interactive control structures using LOOP, WHILE and UNTIL functions
- automatic access to COS or DOS commands
- cassette (or disk) input/output control.

The fast compacting garbage collector automatically finds space for numbers, lists, or character strings if there is any space at all remaining. This means that the programmer never need be concerned about the details of storage allocation.

LISP Functions

AND, APPLY, ATOM, BLANK, CALL, CAR, CDR, CAAR, CADR, CDAR, CDDR, CHARP, CHARS, CLOSE, COND, CONS, CR, DEFUN, DIFFERENCE, DOLLAR, EDIT, EQ, ERROR, ERRORSET, EVAL, F, FSUBRP, GET, GETCHAR, GREATERP, LAMBDA, LESSP, LIST, LISTP, LOAD, LOOP, LPAR, MESSOFF, MESSON, MINUS, NIL, NOT, NULL, NUMBERP, OBLIST, OPEN, OR, ORDINAL, PEEK, PERIOD, PLIST, PLUS, POKE, PRINO, PRINT, PROG, PUT, QUOTE, QUOTIENT, READ, READLINE, RECLAIM, REMAINDER, REMPROP, RPAR, RPLACA, REPLACD, SAVE, SET, SETQ, SUBRP, SUPERPRINT, SUPERVISOR, T, TIMES, UNDEFINED, UNTIL, WHILE, WRITE, WRITEO, ZEROP.

ATOM LISP is available on cassette at only £17.25 inc VAT from your Acorn dealer or direct from Acornsoft. Accompanying 44 page instruction manual "Lisp Theory and Practice" available for £6 (no VAT).

All Acornsoft products are available from authorised Acorn dealers or can be ordered direct from Acornsoft Ltd. 4A Market Hill, Cambridge CB2 3NJ.

The POWER BANK

*The Uninterruptable Power Supply
that will run ANY Micro-Computer System . . .
A VITAL PIECE OF EQUIPMENT FOR RUNNING BUSINESS SYSTEMS*

THE COMPLETE ANSWER TO YOUR POWER SUPPLY PROBLEMS !

Just plug your Micro-Computer, Video, Disc Drives and PRINTER into The Power Bank and continue to run your system in the event of a mains supply failure.

Electrical spikes and surges suppressed which protects your hardware as well as your programme and data.

Output voltage stabilised for all conditions of input voltage.

**System compatible
sine wave output.
Built-in
'sealed for life'
batteries**

The Power Bank illustrated is rated continuously at 120 VA output. A typical load being a micro-computer, 2 floppy disc drives, video display and a 9.5 inch dot matrix printer.

250 VA SYSTEMS ARE ALSO AVAILABLE

Depending upon the load, your system will continue to operate for up to one hour from the internal batteries with the electrical supply off, while an audible alarm warns of a loss of the mains supply. The batteries are monitored when the mains supply is off.

Two things about the new Transtec BC2 will impress you.

The quality. And the price.

The Transtec BC2 is a brand new business computer with a 64K capacity and double sided double density disk drives – 500K per drive. It features a 12" non glare green screen and is housed in a beautifully styled cabinet with separate matching keyboard. And for under £2,000, you'll find it's designed to make you, not break you. Find out more about the full range of Transtec business computers by clipping the coupon and sending it to your nearest Transtec office.

I'd like to know all about Transtec.

At last... a choice of off-the-shelf CP/M packaged software...

Finding CP/M software can often be a problem; for this reason Software Limited has created the complete software source for *your* microcomputer.

Not only can we instantly supply many popular products, such as Wordstar, Datastar and Supersort; but we can supply them to suit various formats, including I.B.M., Apple, Tandy and Superbrain.

If you would like to find out more about making your software buying as easy as pressing a button, then please phone for our catalogue.

Software Limited, 01-387 8832
or 01-388 9927.

The Software Source

...at a price that's right on the button.

Software Ltd., is a new joint venture from Computability and Abacus Business Systems.

CP/M is the trademark of Digital Research.

Wordstar, Datastar & Supersort are trademarks of Micropro International.

Bullock Computers

A NEC Main Dealer

The Business Computer People Who Speak Your Language.

Most companies which supply business computer systems tie you up in knots with their terminology. At Bullock Computers it's different — we appreciate just how confusing it can seem when you first consider buying a system.

The problem is that the majority of business computer companies seem to forget that not everyone understands computers.

That's why at Bullock Computers we talk to you in plain English and provide a full consultancy for the businessman considering making use of computers. We will help you to match the right system to your requirements. If we feel that there are no real benefits to your company in computerising, we will tell you!

We support the **NEC PC8000 Micro Computer System** because we feel that it offers the best in terms of flexibility and value for money of all the systems currently

available.

The system is modular allowing you to expand its capacity at your own pace, and there is a wide range of software packages available covering most applications, including:-

- Word Processing
- Stock Control
- Telecommunications
- Structural and Civil Engineering Analysis
- General Accounting

The flexibility of the **NEC** allows it to run under the Industry Standard Operating System, CP/M, giving access to the enormous range of CP/M packages available — which in plain English means almost unlimited business applications. Prices start at **£599 + VAT** for the basic keyboard unit, and typical business systems cost in the region of **£2000-£3000**.

This system is now available for demonstrations at our City Centre Showroom — or at your own office at a time to suit you. Why not contact me, John Bullock on **08894 3055** for an early appointment, or write to the address below.

**Bullock Computers, Monaco House,
Bristol Street, Birmingham. Tel: 08894 3055**

Bullock Computers

TRS 80 Software

We still support the most amazing graphics software yet for the **TRS 80**, extensive use of sound, real time etc. etc.

ARCADE

Eliminator — you're the pilot of the Eliminator, a space fighter armed to the teeth with awesome firepower. But you're outnumbered and your attackers are keen. (super-sharp graphics and sound)

Defense Command — The Galaxy Invaders have returned in this newest game of skill and excitement with a new twist. (absolutely incredible voice effects — with high quality graphics)

Valkyrie — Leo Christopherson at his best. One of the finest graphics-based adventures available.

Forbidden Planet — The first talking adventure; three different voices — the best yet. (Disk only). All voice output through cassette port — no special equipment required!

Armour Patrol — Real time battle action with excellent use of graphics. Requires great skill.

Adventure (the system) — Now you too can create your own adventure type game. The Adventure System allows you to create data-base containing your own instructions, this database is then used by the machine language driver part of the program to actually run the adventure you just created!!! (Disk only)

Forbidden City — The second follow-up part of Forbidden Planet — can you escape the deadly robots?? All the features of Forbidden Planet. (Disk only)

Scarfman — More popularly known as 'Pukman', this game is now available for the **TRS 80**. Extensive use of graphics makes this as exciting as the Arcade version. Includes sound.

Joysticks — Now you can add fast action to all your games with our latest joystick. The adaption for the **TRS 80** includes a list of patches; this allows you to use your joystick with many of the popular Arcade games. **£23.00**

TRS 80 USERS! If you are thinking of upgrading to another computer consider the **NEC PC8000**. It offers 24K Microsoft Basic incorporating all of the Tandy commands. 32K RAM: Colour: Sound: Built-in Terminal Capability: Printer Interface. **£599.00 + VAT**

Starfighter	Basic-S/CMD
Macro-Monitor	Basic-S

Announcing **EDAS 3.5** — **EDAS** is a sophisticated Editor and assembler for the **TRS 80**.

- All text may be input in upper or lower case
- Assemble directly from one or more disk files via *GET
- Assemble to disk or memory
- Binary, octal, decimal, hex and string constants; multiple constants may be input on a single line
- CMDFILE utility included
- Conditional assembly support
- Cross-reference utility
- DOS functions DIR, FREE, KILL and LIST
- 14-character labels including special characters @, \$, , , ?
- Editor includes block move, global change, renumber and find
- EDTASM & M-80 source files can be read or written.

The features above are only half of what this package can do. In our opinion it's the best! We feel we must mention that **EDAS** is the only commercially available Editor for the **TRS 80 Model 3**.

EDAS Model 1 or Model 3 £60.00

All Program prices include VAT at 15 % Please add **£1.50** for Postage & Packing.

All Programs available for Model 1/111. Please state Model and whether Disk or Cassette when ordering.

**Over forty
of the world's
leading
software
houses have
one thing in
common.**

They support a worldwide standard in software, and so do we.

We understand that one of the most important considerations, before buying a computer, is the software which will be available to you.

This is made easy by the choice of the CP/M operating system. TCL Software, a division of Transam, provides an enormous range of software packages for commercial, scientific, educational and personal needs.

But there is one important difference - we at Transam really understand the CP/M based computer.

CP/M has the advantage of being adopted by an ever

increasing number of software houses. This means that there is a wide range of other software packages written to run on a CP/M based system.

And, of course, any programs you may develop yourself will be compatible with, and can be run on, other systems which are CP/M based.

The Transam range of computers are designed and built in Britain. Our experience gives us the capability to support our users at a very high level, with advice and spares only a phone call away.

Call in to our West End showrooms for all the advice you need about computers and what they can do for you, or for further information write to Transam Microsystems Limited, 59/61 Theobald's Road, London WC1. Telephone 01-405 5240/2113.

RAMEX 16 £75 16K Ram Board for Apple II

Now you can afford to extend your Apple II without taking up a mortgage. Now you can run Pascal, Fortran, 56K CPM with a Z80 Softcard, Integer Basic, Applesoft and other languages on your Apple. Now you can increase your usable memory for Visicalc.

At just £75.00 this is the cheapest RAM Expansion Card available, but you loose nothing in quality or reliability. The only thing you LOOSE is having to remove a RAM chip from the motherboard as the RAMEX 16 has no strap, its memory re-fresh is integral.

RAMEX has its own MANAGER for giving you even more usable space in your Apple. This is achieved by putting DOS into another RAMEX 16 located in any other available slot, thereby freeing up another 10.5K of memory at a cost of only £20.

Order your RAMEX 16's and the MANAGER by calling (0268) 728484. All major credit cards accepted or send your cheque to DDP Research & Marketing, 17 Nobel Square, Basildon, Essex. SS13 1LP.

ECR 81 DATA RECORDER SAVES AND LOADS YOUR PROGRAMS EVERY TIME!

The ECR81 Enhanced Certified Recorder from MONOLITH is a major advancement in cassette recorder technology which minimises the problems associated with standard audio recorders. The unit is a high reliability program store for ZX computers based on a modified, proven cassette mechanism. The two sections of data recording circuitry automatically ensure precise levels are written onto the tape and that optimised signals are received by the computer.

**THE ECR81 IS NOT SUITABLE FOR AUDIO REPRODUCTION
NO MANUAL VOLUME OR TONE CONTROL ADJUSTMENT PROVIDED**

- Each ECR81 comes complete with its own individual certification tape, tested and serial numbered to prove your machine reliability.
 - Mains Operation only.
 - Mains & DIN connector leads provided.
 - Certification of tape head alignment - height and azimuth.
 - Certified tape tension, torque and speed.
 - Fast forward and rewind tape search controls.
- The ECR81 is also suitable for Sinclair ZX80
- Please allow up to 28 days delivery. ● The ECR81 is backed by our 14 day money-back option.

The biggest Apple event ever held in Britain!

Whether you're an active Apple user, or just fascinated by the rapid development of microcomputing generally, you won't want to miss the action-packed weekend that will make up Apple '82.

From Friday, June 4, to Sunday, June 6, the whole of the ultra-modern Fulcrum Centre in Slough will be completely devoted to the onward march of the micro, when some of Britain's top computing experts will be revealing their secrets.

FRIDAY

is education day – the staging of the first National Apple Education Forum and a chance for teachers and lecturers to exchange ideas, evaluate software and listen to a series of lectures covering every aspect of computer-assisted learning. Some 25 Apples will be on show, demonstrating a wide range of applications in the school environment.

SATURDAY and SUNDAY

will be for users generally – the first National Apple Users Convention. So many leading figures in microcomputing want to take part that presentations will be given simultaneously in two adjoining theatres throughout the weekend.

The full timetable of events covers database systems, graphics, music and speech synthesis, Pascal, Cobol and other languages, commercial and industrial applications, hardware and software troubleshooting and micros in medicine.

A central feature of the convention will be a communications workshop, to explore latest developments in linking Apple to Apple, Apple to mainframe, remote information retrieval systems and bulletin boards. It will give a unique insight into a subject that is rapidly becoming one of the most exciting aspects of computing today.

And for light relief, there will also be the national finals of the nail-biting Apple Olympics.

Mail the coupon below for full details of plans for Apple '82 – and about the first-class accommodation that can be reserved for you at some of the best hotels in the area for a modest £17 a night – far below their normal rates.

This major event in the Apple world is attracting users from all parts of the British Isles and overseas. But tickets are limited, so early booking is advisable.

Send for free Apple '82 fact pack now!

FULLER FD SYSTEM FOR ZX80/81

THE MOST VERSATILE SYSTEM FOR EXPANDING YOUR ZX

STANDARD KEYBOARD AND CASE

This splendid keyboard and case houses your ZX81 printed circuit board, which is simply screwed into place, the keyboard plugs into the ZX. You can now enter data with ease. The 40 key switch board is a custom unit not made up out of other manufacturers parts. The keytops are our own design and have the ZX Qwerty and functions foil printed onto them. Access to the user port, TV, MIC, and ear sockets are as per the ZX case.

Built keyboard and case £36.70 or £30.70 as a kit plus £2.10 postage and packing.

EXTENDED KEYBOARD AND CASE

The case is designed to house not only the keyboard and ZX but also our motherboard, power supply, RAM cards and two other boards, not necessarily of our manufacture. The injection moulded case measures 200 mm x 350 mm x 60 mm and houses a 42 keyswitch board, the extra keys can be assigned to other functions. The case is supplied with a "Power On" LED.

Built keyboard and case £39.95 or kit £33.95 plus £2.50 postage and packing. Motherboards £15.95 plus 80p postage and packing. 16k RAM board £35.95. 64k RAM board £79.95.

Keyboard Only Available!
Built £24.95
Kit £18.95 (+P.P. 80p)

WP2020 is an advanced word processing system which runs on selected 8080/Z80 and 16 bit 8088/8086 based microcomputer systems. All standard word processing functions are incorporated plus custom keytops which makes the system easy to use for the beginner or experienced typist. Some of the other main features include, multi-printer support plus background printing, spelling checker, merge documents and communications for electronic mail.

NON-STOP HONEYWELL PRINTERS.

NON-STOP TECHNOLOGY

Honeywell Information Systems Italia is a reality in the world of printers and is out to prove it. Today marks the birth of a second generation of matrix printers created, designed and produced in Europe to meet European demands. Printers characterised by intelligent engineering, total reliability, safety and completeness.

NON-STOP INNOVATION

To supplement those small printers already operational, such as the L11 and S11 80-column series and the larger L31 and S31 132-column series capable of linking with all parallel or serial interface systems, which have been recently updated, Honeywell Information Systems Italia proudly announces the birth of the L32, R32 and L38. These new printers go to enrich an already glittering range of products. They are designed for a professional public, those very people who demand always higher standards of product quality, work continuity, operational simplicity and enhanced speed.

NON-STOP PERFORMANCE

The new L32 and R32 printers provided with a 9 needle matrix head, operate at 150 characters per second on 132 columns. The L32 parallel inter-

face printer furnishes such an outstanding print quality that is characteristic of the whole range of Honeywell products. The serial interface R32, is equipped

ped with special software to automatically interpret programmer's commands to realize even the most complicated graphics. The L38, on the other hand, employs the latest 14 needle matrix head technology and is capable of printing 400 characters per second. Such performance does not imply that the equipment is functioning at its operational limits: in fact, its ability to print over a billion characters without adjustments proves the level of technological advance reached. Honeywell printers: a complete range of customer designed printers, capable of silent, safe and reliable performance. Day after day.

SEIKOSHA

The Seikosha GP100A
Manufactured by the Seiko Company, Japan.

The micropriced microprinter

80 col dot graphics for around £215^{EX. VAT.}

Seikosha introduce the GP100A. A wider and updated version of the highly successful GP80. Now able to take standard width paper, the amazingly compact GP100A offers big printer performance at a fraction of the cost.

With a high quality output that includes full graphics capability, the Seikosha's proven reliability and variety of interfaces make the GP100A the ideal choice for hobbyists, educationalists and businessmen. Full service support is provided by DRG Business Machines' nationwide distributor network.

FEATURES INCLUDE:

- 80 col. 30 cps.
- Dot Matrix unihammer action.
- ASCII standard. 116 characters.
- Full graphics.
- Upper and lower case.
- Double width printing.
- Up to 10" paper width.
- Original + 2 copies.
- Tractor feed.
- Self testing.

INTERFACING for most systems:

- Standard: Centronics.
- Options: RS232C, Serial TTL, 20mA current loop. IEEE-488. Apple II, Sharp (GP100D).

DIMENSIONS:

- Depth – 9¼" (234mm)
- Width – 17¼" (420mm)
- Height – 5¼" (136mm)

OPTIONS:

- Pinch feed.

THE FINEST WORLDWIDE SUPPORTED NATIONWIDE.

DRG (UK) Ltd, Reg No. 22419 England.

DOUBLE your disk capacity

ONLY £55

KEELE CODES' unique compression utility E40 will compress files written in English to approx 40% of their original size in the same time as it would take to make a copy.

Making backups? – receiving disc lasts twice as long
Archiving a Winchester? – half as many disc changes
Data by telephone? – powerful archive commands
Running out of space? – halve the cost
Computer/ – double the space you 'see' from computer transfer? – the terminal
You don't believe it? – part of the package – and twice as fast as a bonus
If not satisfied return within 30 days – we will refund your money.

Proven & Working

Fully developed, E40 is the result of extended research at the University of Keele. Optimized for English, E40 will compress any text/data files. Numeric or tabular material compresses to about 50%. Database files can come as low as 20%. All 256 ASCII characters are processed, and the decode program faithfully restores the original file. A third utility transfers E40 files through a serial port.

CP/M formats include – Xerox 820, Superbrain, North Star, Osborne, Z80-Apple, IMS 5000, RAIR, Vector, NEC, Sharp, Heath/Zenith, 8" IBM. Also available for PDPII and GEC 4080 series.

THE DAWN OF A NEW ERA

SIRIUS 1 ZENITHPLAN MARKET

The Sirius – which provides a new level in Price/Performance for the Business and Professional MICRO COMPUTER USER.

A full range of proven application software is now available...

- * Order Processing * Invoicing * Sales, Purchase and Nominal Ledgers
- * Inventory Management * Micro Modeller
- * Supercalc * Wordstar * Database Access
- * Publishers Accounting System
- * International Portfolio Valuation
- * Job Costing * Estimating

Zenithplan Provide a full range of Business Services

- * Consultancy * Profit Enhancement
- * Bureau facilities (word and data processing)
- * Maintenance * Training

ZENITHPLAN TRAINING CENTRE PROVIDES PROFESSIONAL COURSES ON

- * Business Computer Appreciation
- * Sirius and CP/M – 86 Workshop
- * Micro – Modeller * Supercalc

- * Wordstar * Accounting Systems

The life of a micro-hack isn't — as many seem to imagine — a constant round of free booze-ups accompanied by a deluge of gifts. Occasionally, though, there's a break in the drudgery of sorting through hundreds of press releases, and one such break occurred recently in the form of the Commodore trip to the Hanover trade fair. This year's trip was nothing like as exclusive as last year's (when the PET Jet was pressed into service, allegedly to Jack Tramiel's annoyance) but made up for this in entertainment value. Some 15-odd (or 15 odd) hacks assembled one evening at the Gatwick Hilton (sic) for a press briefing on the new machines and dinner. Rather oddly, the dinner took place before the briefing, so the latter was considerably, er, enlivened by the antics of those who had become, well, lubricated. The festivities continued in a late-night bar which was some-

thing to do with the Miss Reigate contest taking place in the hotel's ballroom and where, to his horror, 'Legless' found himself conned into paying for a round (with his American Express card)! To cut a long story short (ie, we can't remember much of what followed), when the hacks assembled at 6.30am the following morning to catch the plane to Hanover, three of their number refused steadfastly to leave their bedrooms and were thus left behind when the plane took off. For a medium-sized consideration from each of these stay-at-homes, we shall refrain from publishing their names next month. Worse was to follow, though, when Henry 'Shoestring' Budgett developed 'food poisoning' and had to keep leaving the room during the technical briefing on the Commodore stand at Hanover. . . Long standing readers of 'Chip Chat' (if there are any)

will vividly recall our contretemps with Commodore a year or more ago, when CBM insisted on billing us for a review machine, even though we'd returned it. Not to be outdone, and, having waited a decent interval to avoid being accused of jumping on a bandwagon, Ingersoll has taken to doing the same over an Atari plus extras which we borrowed — and returned — some months ago. First a request to return the goods, then an invoice have been received in the PCW ivory tower. On both occasions it was explained in words of few syllables that the machine had been returned. But now we've received another invoice, with an accompanying letter which includes the immortal phrase: '... according to our Computerised ON APPROVAL Ledger the above amount is due to us and the goods are definitely in your possession'. Well, we have news for the

'Computerised' Ledger — the goods are definitely *not* in our possession and we don't owe the £1305 on the invoice. We'll keep you posted. . . Has Editor Rodwell gone mad? Not only has he put himself into hock to buy a Sirius to accompany his ageing Cromemco but he decided to put Sinclair to the test at the recent Spectrum launch — when somebody asked about delivery times, Uncle Clive promptly replied: 'If you order one today you'll get it in two weeks.' Equally promptly, 'Rodders' filled in an order form and handed it to a surprised Clive; now he's going around claiming to be the first person in the world to order a Spectrum. . . Finally, news of a new micro from Acorn, due for volume production in October or thereabout: 32k RAM, 32k ROM, BBC Basic, colour, sound, Econet capability and a rubber membrane keyboard, selling at around £120-£150.

THE BEST ADD-ON MEMORY MADE FOR YOUR COMPUTER

VIC 20
ZX81
ATOM
VIDEO GENIE

TRS 80
PET
UK 101

SEE IT HERE, BUY IT NOW. AUDIO COMPUTERS AT STAND V35 (IN THE ZX81 VILLAGE)

VIC: The VCR-20 is an ultra low power (CMOS) 20K RAM plug-in cartridge, retailed at £54.00 in kit form and £59.00 in ready-built.

We can also supply with only 4K of RAM, ready-built at £20.00 and as many extra 2K RAM chips (HM6116) as you require at £5.00 each. No PSU required, beige plastic cover.

The VCS is a cartridge simulator and combines the advantage of the motherboard with two slots and the 8K battery back-up CMOS RAM. This emulates cartridges and adds 8K to RAM. Available end of April in kit form £39.00 and ready-built £45.00.

ATOM: The DUO-1 is the latest 64K memory add-on designed for the Atom, combining very low power consumption (200mA at +5V) and RAM power. This runs, loads and saves 64K basic programs. Kit form £64.00, ready-built £70.00. No PSU required.

ZX81: The SPECIAL RAMPACK is the nicest around, only 3in x 4in cased in a black trim matching case, offers 56K of RAM to make together with the 8K Sinclair ROM the most powerful system in that size. No PSU required. Kit form £54.00, ready-built £60.00.

32K RAM CARD: 48340 bytes free . . . for TRS 80 and Video Genie. No PSU required. Kit form £40.00, ready-built £46.00.

64K DRC MODULE FOR PET & UK101: Kit form £70.00, ready-built £80.00.

All prices are correct at time of going to press — Prices include VAT @ 15% and P&P for the UK — Quantity discount available for export and dealers — Order by phone: ZX81, TRS-80, Video Genie and Z80 based: Southend (0702) 613081 — Vic, Atom, Pet, UK101 and 6502 based: Southend (0702) 618144. Telex: 995337 G AUDCOM. Access and Barclay. All mail to: Audio Computers, 87 Bournemouth Park Road, Southend On Sea SS5 2JJ.

... in the unlikely event,

... At Personal Computers we'll give it a happy ending.

Personal Computers Limited have been in the personal computing business right from the start — so we've got our values sorted out.

It's important for you to choose the right hardware and vital to select the right software.

To help you make the right choice we offer our highly-trained staff.

They know what makes computers whirr, and they know how to give you the right kind of support and maintenance.

THE BEST AVAILABLE

We stock the best available hardware and software packages in the market.

Such as Apple and Sharp units, with the latest additions like 16K RAM card.

We have I.E.E.E. Interface, low cost serial, parallel interfaces, Doublevision 80 character card, numeric keypads, personal computer plotters, Paper Tiger printers and much more besides.

Whatever you need in computing, we will satisfy your requirements.

FROM PERSONAL COMPUTERS

- **Small Business/Accounting.** We provide low-cost invoicing, purchase, sales and general ledger systems.
- **Financial Planning.** Micromodeller or Visicalc for ad hoc or regular financial reporting.

- **Dow Jones & Prestel** (including I.P. Terminal) services to the city, plus access to city commodities data base
- **Word Processing.** Our Format 80 system is recognised as the best of its kind.
- **Databases.** State-of-the-art products like Personal Filing Systems and Data Factory.
- **Graphics.** Pad to plotter software and low-cost plotter.
- **Technical Support.** Our knowledge of computer languages and application requirements is unrivalled. And we can supply either on-site or in-house maintenance.

Once again ... Personal Computers Limited give the story a happy ending.

Computers are only as good as the people who use them ... and sell them. Think about that! Then give us a call.
